ANNUAL REPORT

OF THE

PUBLIC PRINTER

FOR THE

FISCAL YEAR ENDED JUNE 30, 1890.

DECEMBER 18, 1890.—Referred to the Committee on Printing and ordered
to be printed.

WASHINGTON:

GOVERNMENT PRINTING OFFICE.

1890.

ANNUAL REPORT
OF
THE PUBLIC PRINTER.

OFFICE OF THE PUBLIC PRINTER,
Washington, D. C., December 17, 1890.

SIR: As required by law, I have the honor to transmit to Congress the report of the condition and operations of this office for the fiscal year ended June 30, 1890.

F. W. PALMER,
Public Printer.

Hon. LEVI P. MORTON,
President of the Senate.

To the Senate and House of Representatives:

In the appendix to this report will be found tabular exhibits showing in detail the financial transactions of the Government Printing Office for the fiscal year which terminated June 30, 1890. In order that there may be a full knowledge of the present condition and future needs of the office, I submit herewith a statement showing what means have been adopted for the improvement of the plant since the close of the fiscal year.

In response to urgent appeals by some of my predecessors and myself for a new fire-proof building for this office, provision was made by act of Congress during the last session for the appointment of the Secretary of the Treasury, the Architect of the Capitol, and the Public Printer as a commission to select a suitable site for such a building. They were empowered to acquire, either by purchase or condemnation proceedings, the land necessary for the purpose, and the sum of \$250,000, or so much thereof as might be necessary, was appropriated. Provision for this fund was made in the act making appropriations for sundry civil expenses of the Government, approved August 30, 1890. The commissioners held their first session in the rooms of the Secre-

tary of the Treasury on the 1st of September, and organized by the election of Hon. William Windom as chairman and F. W. Palmer as secretary. During this session a resolution was adopted authorizing the insertion in two daily journals of this city of an advertisement, inviting the presentation of sealed proposals for the sale of land for the purpose heretofore mentioned. In response to this advertisement, seventeen different bids were submitted, and, after careful personal examination of all the different tracts of land offered had been made by the commission, the west half of square 678, bounded by G street on the north, First street on the east, North Capitol street on the west, and F street and Massachusetts avenue on the south, was deemed in all respects the most eligible, and articles of agreement for its purchase were executed by the commission and Mr. C. A. Snow, the owner. The question of title was submitted to the Attorney-General for his examination; but, inasmuch as conflicting claims of ownership were submitted to him, he reported, on the 3d of December, that up to that time the title had not been perfected; and the board therefore requested him to commence proceedings at once for the condemnation of the property, in accordance with the provisions of the act under which the commission had been appointed. In the appendix to this report will be found in detail an official statement of the proceedings of the board in fulfillment of the trust committed to them.

A site for a new Government Printing Office having been thus virtually selected, I recommend most earnestly an appropriation by Congress during the present session for the construction of a fire-proof structure. The reasons for urgency were stated in my last annual report, and were, in brief, that a portion of the present building is constructed of combustible material and is constantly liable to destruction by fire; that there are at times in the building more than two thousand employés, and that a fire would almost inevitably be accompanied by the loss of a large number of human lives; that the present structure is ill lighted, poorly ventilated, inconveniently arranged, and so circumscribed in dimensions that much of the work is done at great disadvantage. In the interest of economy, of security to Government property, and of humanity, the new structure should be commenced at the earliest possible day and prosecuted to final completion with the utmost vigilance and dispatch.

In the appendix to this report will be found a statement of the condition of the presses in this office on the 30th day of June, 1890. Since that date contracts have been made for nine new presses, which will take the place of an equal number which have become unserviceable by reason of long use. Careful estimate has been made of the additional number of new presses which will be needed, and an appropriation of \$100,000 is asked for this purpose. The increase of work in this office makes necessary the procurement of new and improved machinery, and, while celerity of work would be secured by such expenditure, economy would be also accomplished.

In my last annual report I presented the facts connected with the claim of the estate of Mr. John C. Rives for the storage of stereotype plates of the Congressional Globe. Although this service was rendered mainly during the administrations of my predecessors, I consider the claim a just one, and therefore recommended its payment. I renew that recommendation.

For details showing the amount of work executed by this office during the last fiscal year, reference is asked to the tabular statements in another part of this report.

F. W. PALMER,
Public Printer.

APPENDIX.

REPORT OF THE COMMISSION TO SELECT A SITE FOR THE GOVERNMENT PRINTING OFFICE.

To the Senate and House of Representatives :

The undersigned, appointed as a Commission to select a site for the Government Printing Office, beg leave to submit the following report :

During the first session of the Fifty-first Congress the act making appropriations for sundry civil expenses of the Government, approved August 30, 1890, contained the following provisions :

SEC. 2. That to provide accommodation for the Government Printing Office, and the construction of the needed storage and distributing warehouses in connection therewith, the Secretary of the Treasury, the Public Printer, and the Architect of the Capitol, acting as a board, be, and they are hereby, empowered and instructed to acquire, either by purchase or by condemnation proceedings, as hereinafter provided, the land necessary, in their opinion, for the purposes aforesaid, and for the purposes stated, the sum of two hundred and fifty thousand dollars, or so much thereof as shall be necessary, is hereby appropriated out of any money in the Treasury not otherwise appropriated.

SEC. 3. That in the event it shall be necessary, in order to carry out the purpose of the foregoing section, for the board, as above constituted, to acquire land, said board is empowered and directed to acquire the same by negotiation, where any such land may and can be so acquired and title secured at a price not above a fair relative value as to other lands which have been sold in the immediate vicinity ; or if the said board hereby created shall be unable to purchase said land by agreement with any one or more of the respective owners at a reasonable price within sixty days after the passage of this act they are authorized and directed to make application to the supreme court of the District of Columbia, at any general or special term thereof, by petition for the condemnation of such land not so purchased, and for the ascertainment of its value. Such petition shall contain a particular description of the property not so purchased, and selected for the purpose aforesaid, with the name of the owner or owners thereof and their residences, so far as the same may be ascertained, together with a plan of the land proposed to be taken ; and thereupon the said court is authorized and required to cite all such owners and all other persons interested to appear in said court at a time to be fixed by such court, on reasonable notice, to answer the said petition ; and if it shall appear to the court that there are any owners or other persons interested who are under disability the court shall give public notice of the time at which the said court will proceed with the

matter of condemnation; and at such time if it shall appear that there are any persons under disability either who have appeared or who have not appeared, the court shall appoint guardians ad litem for each such persons, and the court shall thereupon proceed to appoint three capable and disinterested commissioners to appraise the value of the respective interests of all persons concerned in such lands, under such regulations as to notice and hearing as to the court shall seem meet. Such Commissioners shall thereupon, after being duly sworn for the proper performance of their duties, examine the premises and hear the persons in interest who may appear before them, and return their appraisement of the value of the interests of all persons, respectively, in such land; and when such report shall have been confirmed by the court the President of the United States shall, if he think the public interest requires it, cause payment to be made to the respective persons entitled according to the judgment of the court, and in case any of such persons are under disability, or can not be found, or neglect to receive payment, the money to be paid to any of them shall be deposited in the Treasury to their credit, unless there shall be some person lawfully authorized to receive the same under the direction of the court, and when such payments are so made, or the amounts belonging to persons to whom payment shall not be made are so deposited, the said lands shall be deemed to be condemned and taken by the United States for the public use.

The Commissioners authorized by the act heretofore mentioned held their first session in the rooms of the Secretary of the Treasury on the 1st of September, 1890, and organized by the election of Hon. William Windom as chairman and F. W. Palmer as secretary. During this session a resolution was adopted authorizing the insertion in two daily journals in this city of an advertisement inviting the presentation of proposals for the sale of land for the purpose heretofore mentioned. The advertisement was in the following language:

PROPOSALS FOR A SITE FOR A BUILDING FOR THE GOVERNMENT
PRINTING OFFICE.

WASHINGTON, D. C., *September 2, 1890.*

Sealed proposals will be received until 12 o'clock m. of Wednesday, September 17, 1890, by the undersigned, for the purchase of a site for a new building for the Government Printing Office, said site to contain about one hundred and fifty thousand (150,000) square feet, and to be within the bounds of H street north, First street east, B street north, and Ninth street west, in the city of Washington.

Each proposal will state the location of the ground, the number of square feet offered, and the names and residences of the owner or owners.

These proposals must be indorsed "Proposals for a site for the Government Printing Office," and addressed to Hon. William Windom, Secretary of the Treasury, chairman of the Board.

WILLIAM WINDOM,
Secretary of the Treasury.
FRANK W. PALMER,
Public Printer.
EDWARD CLARK,
Architect of the Capitol.

On the 17th of September, in accordance with the terms of the foregoing advertisement, the Board received and considered proposals for the sale of various tracts of land, as follows:

1.

WASHINGTON, D. C., *Sept. 15, 1890.*

To Hon. WILLIAM WINDOM,

Secretary of Treasury:

DEAR SIR: I propose to offer about 5,600 feet of ground in square 624, fronting 32 feet on G st., N. W., for site for Government Printing Office, for two dollars a sq. foot, with the improvements. House 35 has 7 rooms, a large frame stable, and large (brick) carriage house. House 57 has 4 brick rooms, and wood kitchen in front; frame house in alley.

Respectfully,

TIMOTHY COSTELLO,
35 G st., N. W.

2.

SEPTEMBER 15, 1890.

Hon. WM. WINDOM,
FRANK W. PALMER, Esq.,
EDWARD CLARK, Esq.:

GENTLEMEN: I hereby propose to offer lot 15, square 624, Maguire's subdiv., twenty-four (24) ft. front by 175 ft. 3 inches in depth, with improvements, a 1-story brick carriage house in front, with a two-story brick stable in rear, at \$2.25 per sq. ft.

JOHN G. WOLFE,
305 H street, N. E., City.

3.

WASHINGTON, D. C., *September 15, 1890.*

Hon. WILLIAM WINDOM,

*Chairman of the Board for Selecting a Site for a
Building for the Government Printing Office:*

In pursuance of advertisement of September 2nd, 1890, I offer my lot, with improvement, which is situated on G street between 1st street and North Capitol street, northwest, in square No. 624, and lot No. 11, containing 1,392 square feet, being 16 feet front on G st. and 87 feet deep, at two (2) dollars per square foot, and a two (2) story and base-ment brick house for one thousand (\$1,000) dollars. I am the owner and occupy the above premises.

MARY E. HARVEY,
Number 27 G st., N. W.

1,392 feet
\$2 per foot

\$2,784
1,000 improvements

3,784

4.

WASHINGTON, *September 8, 1890.*

To the Hon. WILLIAM WINDOM,
Secretary of the Treasury;
 FRANK W. PALMER,
Public Printer;
 EDWARD CLARK,
Architect of the Capitol:

GENTLEMEN: I own two pieces of property, both of which are located in square 624, fronting on G street, N. W., and running back to Jackson alley.

The first is the eastern part of lot numbered (13), in square 624, sixteen feet front by a depth of 175 feet and 3 inches, containing, in all, 2,804 feet, and improved on the G street front by a three-story and back building, 8 large rooms and 2 small rooms, and on the Jackson alley front by a two-story brick containing 4 rooms. Both houses are brick. I offer said lot, together with all improvements, for two dollars and fifty cents per square foot (\$2.50 per square foot).

The second is the eastern part of lot numbered (25), in square 624, fronting sixteen feet (16 ft.) on G street and running back one hundred and seventy-five feet three inches (175 ft. 3 in.) to Jackson alley. This lot is improved on the G street front by a two-story and back building brick house, containing 6 good rooms and 2 small rooms. The said lot is improved on the Jackson alley front by a two-story brick house, containing 4 rooms. I offer this lot, together with all improvements, for two dollars and twenty-five cents per square foot (\$2.25 per square foot), 2,804 feet.

Very respectfully,

JOHN F. KELLY,
Lieut. Met. Police,
Residence, 31 G street, N. W.

5.

WASHINGTON, D. C., *Sept. 16, 1890.*

To the Hon. WILLIAM WINDOM,
Secretary of United States Treasury:

SIR: We, the undersigned, have the honor to submit the following proposal for the sale of lots A, B, 1, 2, and 3, square 624, fronting one hundred and nine (109) feet on N. Capitol street, between Jackson alley and G sts., N. W., with a depth of 130 feet to a 15-foot alley, amounting to 14,170 square feet, more or less.

For the sum of three (3) dollars per square foot.....	\$42,510.00
For improvements erected on said lots.....	20,000.00
	62,510.00

ANDREW GLEESON, } *Owners.*
 ELLEN GLEESON, }
 802 First st., N. W.

6.

WASHINGTON, D. C., *Sept. 16th, 1890.*

To the Hon. WILLIAM WINDOM,
Secretary of the U. S. Treasury :

SIR: The undersigned respectfully submits the following proposal for the sale of original lot 43, square 624, fronting on H st., north, between North Capitol and First st., west, for a site for the Government Printing Office.

Original lot 43 is 24 feet front by 175.3 ft. deep, is bounded on the west by a 20-ft. alley, and contains 4,206 sq. ft., at \$2.25.....	\$9, 463. 50
Improvements on front, brick store; improvements on alley, brick stable and dwelling; improvements on rear, two brick houses; total improvements	4, 000. 00
Total for orig. lot 43 and improvements	13, 463. 50

D. CONNELL,
 741 First, N. W., City.

7.

WASHINGTON, D. C., *September 16, 1890.*

To the Hon. WILLIAM WINDOM,
Secretary of the U. S. Treasury :

SIR: The undersigned respectfully submits the following proposal for the sale of lots 44 and 45 in square 624, fronting on H st., north, between North Capitol st. and First st., west, for a site for the Government Printing Office :

Original lot 44 is 24 feet front by 175.3 ft. deep, and contains 4,206 sq. ft., at \$2.25.....	\$9, 463. 50
Improvements, 2 stores and dwelling on front.....	5, 000. 00

JOHN J. FULLER,
 58 H st., N. W.

8.

WASHINGTON, D. C.,
September 16, 1890

To the Hon. WILLIAM WINDOM,
Secretary of the U. S. Treasury :

SIR: The undersigned respectfully submits the following proposal for the sale of part lot 46, square 624, fronting on H st., north, between

North Capitol and First st., west, for a site for the Government Printing Office.

Lot 46 is 24 ft. front by 125 ft. deep, and contains 3,000 sq.

feet, at \$2.25	\$6,750.00
Improvements, store and dwelling	3,000.00
Total	9,750.00

JOHN ELBERT,
54 H st., N. W.

9.

To the Board of Commissioners for

Purchase of Site for Government Printing Office:

I own in square six hundred and twenty-four (624), bounded by H street, North Capitol street, G street, and First street, northwest, parts of sublots nineteen (19) and twenty (20), containing about three thousand (3,000) square feet, which I am willing to sell for two (\$2) dollars per square foot, and improvements thereon at value assessed by District assessor for taxation.

Very respectfully, etc.,

ALEXANDER BRUCE,
No. 45 G street, N. W.

WASHINGTON, D. C., Sept. 16th, 1890.

10.

WASHINGTON, D. C., September 16, 1890.

To Hon. WILLIAM WINDOM,

Secretary of the Treasury:

DEAR SIR: I propose to offer for sale about (6,660) six thousand six hundred and sixty sq. feet of ground fronting on G st., in square numbered six hundred and twenty-four (624), all of sublots eighty one (81) and eighty [-two] (82), now used for storage purposes by the Government Printing Office, for one dollar and seventy-five cents (\$1.75) per sq. foot.

Respectfully,

M. GORMAN,
No. 823 2nd st., N. E., City.

11.

WASHINGTON, D. C., September 10th, 1890.

Hon. WM. WINDOM,

Secty. Treasury, &c.:

SIR: We submit the following "under proposals for site, &c."

In square 630, pt. of lot 4, 22 ft. on N. Jersey ave. by 147 ft., owned by Morris Keim. Contains 3,250 sq. feet. Residence, Springfield, Md. We are his duly authorized agent to offer this lot at \$1.60 per sq. ft.

Resp'y,

FISH & MILLER, Agents.

12.

WASHINGTON, D. C., *Sept. 17th, 1890.*

Hon. WM. WINDOM,
Secretary of Treasury:

DEAR SIR: We also submit for your consideration square No. 630, between D and E and New Jersey avenue and North Capitol street, northwest, containing about 190,000 square feet; the price exceeding the appropriation, we concluded to give only a portion of it, but the location being so central and so close to the Capitol makes it very desirable for the purpose required.

We give below prices and names of owners; location is marked on the plat inclosed:

Acker Bros., 45,241 square feet (2 corners).....	\$100, 000
A. Carry, 36,000 square feet.....	54, 000
M. Thomas, 4,400 square feet	20, 000
S. M. Plumley, 7,066 square feet	20, 000
Total	194, 000

Fenno, Wylie & Reilly, containing 29,226 sq. feet, exclusive of alleys, we estimate can be purchased for \$55,000, making a total of 121,933 sq. feet, for the sum of \$249,000.

We also have the following for sale in the same square, on N. J. ave. front and E st.:

Lewis, 1,720 square feet	\$11, 000
W. Nailor, 2,992 square feet.....	12, 000
Ferry, 10,500 square feet	42, 000
Rider Bros., 8,335 square feet.....	16, 670
Hattel, 6,250 square feet.....	10, 000
Dimarzo, 1,550 square feet.....	3, 100
Total	94, 770

The other owners in the square from whom we have not heard are:

Hay,	}	Estimated No. feet, 10,000 ft.; estimated price, \$20,000.
Wroe,		
Corcoran,		
Quick,		
Freirich.		

Very respectfully,

CARUSI, EVANS & CARUSI.

N. B.—As the time given would not permit us to complete investigation of the entire square, we would be glad to do so if requested.

13.

WASHINGTON, D. C., *Sept. 17, 1890.*

Hon. WM. WINDOM,
*Secretary of the Treasury, Chairman of the Board
 for Selection of Site for Government Printing Office:*

SIR: In accordance with your advertisement dated Sept. 2, 1890, a copy of which is hereto annexed, we have the honor to tender for use as a site for the Government Printing Office the following property in

square numbered five hundred and seventy-four (574), situated between First and Second streets, west, and B, C, and Indiana avenue, north:

	Price, including improvements.
Lot 1, the property of Samuel Emery, of Washington, D. C., containing 40,384 sq. ft.	\$74,691.20
Lots A, B, C, D, E, F, of 3, sub. f of 3, b. g. 420, R. and S., the property of Matthew G. Emery, of Washington, D. C., containing in all 66,216 sq. ft.	127,188.80
Lots O, P, and Q, the property of Thos. W. Smith, of Washington, D. C., containing in all 11,034 sq. ft.	51,500.00
Lots M and N, the property of the estate of W. W. Corcoran, deceased, of Washington, D. C., containing in all 4,359 sq. ft.	11,919.50
Lot 13, property of E. A. Dovilliers, of Washington, D. C., containing 2,101 sq. ft.	8,252.50
Lot 12, property of Eugene Carusi, of Washington, D. C., containing 2,101 sq. ft.	8,752.50
Lot 11, property of Emily N. Meloy, of Washington, D. C., containing 2,101 sq. ft.	12,000.00
Lot 9, property of Anton Eberly, of Washington D. C., containing 2,101 sq. ft.	11,303.00
Lot 18, property of Louis H. Schneider, of Washington, D. C., containing 1,065 sq. ft.	6,102.50
Lot 19, property of Louis H. Schneider, of Washington, D. C., containing 1,065 sq. ft.	6,102.50
Lot 17, property of A. L. and John M. Eshleman, of Washington, D. C., containing 1,151 sq. ft.	12,000.00

Total number of square feet submitted, 133,678, more or less.

Respectfully,

PLANT & TURPIN,

1429 New York Avenue, Washington, D. C.

14.

WASHINGTON, D. C., Sept. 17, 1890.

Gentlemen of the Board for the Selection of a

Site for the Public Printing Office of the United States:

SIRS: In reply to your advertisement in the Star, I beg to offer one hundred and fifty thousand (150,000) feet of the western half of square 678, situated on North Capitol st., between F and G streets, including lots 3, 4, 5, 6, 7, and 8, at the rate of one dollar and fifty cents (\$1.50) per square foot; or I will sell all the ground, 170,674½ square feet, for two hundred and forty-nine thousand seven hundred dollars (\$249,700). I am the sole owner, and can make a perfect title and give immediate possession of the entire property. The ground above offered is vacant, except temporary structures, and is surrounded by a high board fence. My residence is at 712 Eighth street, N. W., Washington, D. C.

Very respectfully,

C. A. SNOW.

WASHINGTON, D. C., September 25, 1890.

Gentlemen of the Board of Selection of a

Site for the Government Printing Office:

GENTLEMEN: In response to your letter of recent date, I have the honor to state that, after consideration of the same and responding thereto, I submit the following amendment of the within proposal: I will sell the west half of said square six hundred and seventy-eight,

which contains, in square feet, 170,648 sq. ft., more or less, for the sum of two hundred and forty-three thousand one hundred and seventy-five dollars (\$243,175). Said ground is bounded on the north by G street, N. E., on the south by Massachusetts avenue and F street, N. E., on the west by North Capitol street, and on the east by an unnamed street or alley sixty feet wide along the entire length of said tract.

Respectfully,

C. A. SNOW.

15.

WASHINGTON, D. C., *Sept. 10th, 1890.*

Hon. WM. WINDOM,
Secty. Treasury, etc.:

SIR: We submit the following property under the invitation for proposals for site for Govt. Printing Office:

This square (754) is 2 streets east of the limits of your advertisement, but within the scope of the law.

We offer the east half of the square 754, 164' 8½" on E and F sts., N. E., by 348 ft. on 3d st., containing 58,317½ sq. ft., at \$1.00 per sq. ft., owned by D. A. Windsor, of Alexandria. There are no improvements of consequence on the square.

Resp'y,

FISH & MILLER, *Agents.*

16.

WASHINGTON, D. C., *Sept. 16th, 1890.*

Hon. WM. WINDOM,
Secretary of Treasury, Washington, D. C.:

DEAR SIR: We beg to offer the following square of ground as a site for the Gov't Printing Office. Although not in the limit described in the advert. its close proximity and convenience to the Capitol, and also the cheapness of the ground, we hope, may be worth your consideration.

Square 754, containing 114,637 square feet, between 2nd and 3rd and E and F sts., N. E.; price, \$1.25 per foot, amounting in all to \$143,296²⁵/₁₀₀.

The names of owners are David A. Windsor, Alexandria, Va.; Dr. L. W. Ritchie, 3259 M st., N.W., and Wash. Danenhower, for S. D. Smoot, Alexandria, Va.

Very respectfully,

CARUSI, EVANS & CARUSI.

17.

WASHINGTON, D. C., *Sep. 11th, 1890.*

Hon. WILLIAM WINDOM,
Secty. of the Treas. and chairman of board:

D'R SIR: We have the honor to submit for a site for the Gov't Printing Office the south half of square 673, as per inclosed plat, fronting 273³ feet on North Capitol and First st., east, and 782⁴ feet on L

street and intermediate street, containing about 213,772 sq. feet, for the sum of two hundred and fifty thousand dollars. We venture to submit this, although it is not in the limits named in your proposals for bids. The city will lay asphalt on N. Capitol this season to M st., and the building of the electric R. R on N. Capitol from B st., N. W., to Boundary will give ample facilities for transit. Material could no doubt be delivered on the railroad to the Capitol.

The tracks of the B. & O. R. R. are located on First st., N. E., and switches could be run into this square if desired. Sewerage facilities are ample.

Very resp'ly,

A. L. BARBER & Co.,
By J. PAUL,
Agents for Owners:
DAVID R. WINDSOR,
Washington, D. C.,
WILLIAM MAHONE,
Petersburgh, Va.

The foregoing bids were scheduled and the Board then proceeded to view by personal inspection the several pieces of property offered. On the 23d of September the Board met at the office of the Secretary of the Treasury, Hon. George S. Batcheller, Acting Secretary of the Treasury, being present and acting in behalf of the Secretary, and, after a full consideration of the various propositions submitted, authorized the chairman to prepare and send a letter, of which the following is a copy:

OFFICE OF THE PUBLIC PRINTER,
Washington, D. C., September 23, 1890.

C. A. SNOW, Esq.,
712 Eighth street, northwest, city.

DEAR SIR: The Board to provide accommodation for the Government Printing Office, having under consideration several parcels of land for such site, have examined the western half of square 678, owned by you. As required by statute, the Board is limited as to price "not above a fair relative value as to other lands which have been sold in the immediate vicinity."

Considering the price higher than the Board is authorized to pay, it is desired that you inform the Board at an early day the lowest price you will accept for said property.

The Board will meet at 11 o'clock Thursday morning, the 25th instant, to consider your answer to this request. Should you desire to be present on that occasion you are invited to do so.

Very respectfully,

GEORGE S. BATCHELLER,
Acting Secretary of Treasury,
Chairman of Board.

In addition to the foregoing authorization, the Public Printer was requested to ascertain and report at a subsequent meeting of the Board the price of any real estate sold recently in the vicinity of the Government Printing Office.

At a meeting of the Board, held on the 25th of September, Mr. C. A. Snow, owner of the west half of square No. 678, city of Washington, was present by invitation, and submitted an amended offer to sell the said property, together with affidavits of property owners in the immediate vicinity of said square. Mr. Snow's amended proposition was as follows:

WASHINGTON, D. C., *September 25, 1890.*

*Gentlemen of the Board of Selection of a
Site for the Government Printing Office :*

GENTLEMEN: In response to your letter of recent date, I have the honor to state that, after consideration of the same and responding thereto, I submit the following amendment of the within proposal: I will sell the west half of said square 678, which contains in square feet 170,648 square feet, more or less, for the sum of \$243,175. Said ground is bounded on the north by G street northeast, on the south by Massachusetts avenue and F street northeast, on the west by North Capitol street, and on the east by an unnamed street or alley 60 feet wide, along entire length of said tract.

Respectfully,

C. A. SNOW.

The foregoing proposition was accompanied by the following affidavits:

WASHINGTON, D. C., *September 24, 1890.*

DISTRICT OF COLUMBIA, ss:

I, Charles A. Shields, being duly sworn, do depose and say that as a real estate broker I sold to Messrs. Lane & Malnati lots 19 and 25 in square 679, containing about 12,862.67 feet of vacant ground, for \$16,078.34, or \$1.25 per foot cash, on or about February 17, 1890.

CHARLES A. SHIELDS,
1405 F street, northwest.

Subscribed and sworn to before me this 24th day of September, 1890.

WILLIAM M. SMITH,
Notary Public.

DISTRICT OF COLUMBIA, ss:

On this day, 24th of September, in the year of our Lord 1890, before me, the subscriber, a notary public in and for the District, personally appeared John Raedy, and made oath in due form of law, deposes and says that I offered the owner of lot No. —, in square No. 677, the sum of \$1.25 per square foot, and said offer was refused, the parties stating that they valued the lot at a higher price; that said offer was made in good faith.

JOHN RAEDY.

Subscribed and sworn before me.

CHARLES W. FLECKHER,
Notary Public.

DISTRICT OF COLUMBIA, ss:

On this 25th day of September, in the year of our Lord 1890, before me, the subscriber, a notary public in and for the District, personally appeared W. H. German, and made oath in due form of law, deposes and says that he had a client who was desirous of purchasing a corner property in the city of Washington; that in accordance with his desires deponent found a piece of property situated at the corner of Massachusetts avenue and North Capitol street, being lots Nos. 1 and 42, square 625, for which he offered the owner \$2.50 per square foot, and which offer was refused, the owner holding said property at \$25,000, being at the rate of about \$4 per square foot.

W. H. GERMAN.

Subscribed and sworn before me.

JOSEPH ROY,
Notary Public.

The Public Printer reported that Mr. McDowell, corner of North Capitol street and Massachusetts avenue, had been informed that \$2.50 per square foot had recently been offered for property at the corner of North Capitol street and Massachusetts avenue, which offer had been declined; that Mr. McDowell had also knowledge of an option at the rate of \$1.50 per square foot for property at the corner of E and North Capitol streets, the option to be accepted in sixty days or followed by a forfeiture of \$1,000; that Mr. McDowell himself owns 7,000 square feet of ground at the corner of E and North Capitol streets, for which he had refused an offer of \$2 per square foot. The Public Printer, in addition, reported that Mr. T. A. Rover, who owns considerable property in the vicinity of the Government Printing Office, values the said property at \$2.50 per square foot, some of which property he had bought two years ago at the rate of \$1.50 per square foot; that Mr. Rover had recently purchased the northeast corner of North Capitol and H streets for \$6 per square foot, with improvements, and that he values the land, without the improvements, at the rate of \$4 per square foot; that Mr. Rover represents that offers which he recently made of \$3 per square foot for land opposite the Government Printing Office on North Capitol street had been declined.

After careful examination of all the bids and after all the bids which had been offered had been inspected personally by each member of the Board, a motion was made and carried unanimously for the acceptance of the amended proposition of Mr. C. A. Snow. The following articles of agreement were thereupon prepared, read, accepted, and signed by Mr. C. A. Snow, owner of the property in question, and by George S. Batcheller, Acting Secretary of the Treasury; Frank W. Palmer, Public Printer; and Edward Clark, Architect of the Capitol:

Articles of agreement, made and entered into this twenty-fifth day of September, A. D. one thousand eight hundred and ninety, between C. A. Snow, party of the first part, and George S. Batcheller, Acting Secretary of the Treasury, Frank W. Palmer, Public Printer, and Edward Clark, Architect of the Capitol, duly authorized hereto, on behalf of the

United States of America, in pursuance of an act of Congress approved August 30, 1890, party of the second part, in the manner following:

The said party of the first part, in consideration of the sum of one dollar to him in hand paid, the receipt whereof is hereby acknowledged, hereby agrees to sell to the party of the second part the following-described real estate, situated in the city of Washington, District of Columbia, to-wit:

The western half of square numbered six hundred and seventy-eight, bounded on the north by G street, on the west by North Capitol street, on the south by Massachusetts avenue and F street, and on the east by the alley, sixty feet wide, as now laid out, for the sum of two hundred and forty-three thousand one hundred and seventy-five dollars (\$243,175), which the said party of the second part hereby agrees to pay to the said party of the first part, in cash, upon the execution, acknowledgment, and delivery to the United States of America, party of the second part, of a proper deed for the conveyance and assuring to them of the fee simple of said premises, free from all incumbrances and with taxes paid to date, which said deed shall contain a clause of general warranty.

The title of the property hereby agreed to be conveyed shall be submitted to and be approved by the Attorney-General of the United States, and all the terms herein agreed upon shall be complied with within five (5) days from the date hereof.

In witness whereof the parties to these presents have hereunto set their hands and seals this 25th day of September, A. D. 1890.

C. A. SNOW. [SEAL.]

GEO. S. BATCHELLER, [SEAL.]

Acting Secretary of the Treasury.

FRANK W. PALMER, [SEAL.]

Public Printer.

EDWARD CLARK, [SEAL.]

Architect of the Capitol.

Signed, sealed, and delivered in the presence of—

C. M. HENDLEY,

H. T. BRIAN.

Mr. Snow then presented an abstract of title to the west half of square No. 678, and the following letter to the Attorney-General was authorized to be presented to that officer, together with the articles of agreement and abstract of title:

WASHINGTON, D. C., *September 26, 1890.*

SIR: The Board to provide a Site for the Government Printing Office, authorized by the sundry civil law approved August 30, 1890, has the honor to transmit to you articles of agreement between C. A. Snow, the owner of the west half of square No. 678, in the city of Washington, and said Board, together with an abstract of title of said ground, and to request that you have the title examined, and if found good that you will have prepared the deed necessary to vest the title in the United States.

By order of the board.

Very respectfully,

GEORGE S. BATCHELLER,
Acting Secretary of the Treasury,
Chairman of the Board.

The ATTORNEY GENERAL, *City.*

At a meeting of the Commission, held at the Treasury Department on Tuesday, December 2, the following resolutions were offered and adopted:

Resolved, That the President of the Board be instructed to communicate with the Attorney-General and ascertain whether the title to west half of square 678 has been perfected, so that the parties offering the same can convey complete and perfect title.

It was further resolved that, if not so perfected, the Attorney-General be requested to proceed as early as practicable to procure the property by condemnation, as authorized by law.

In accordance with the foregoing resolutions the Secretary of the Treasury addressed a communication to the Attorney-General in the following language:

TREASURY DEPARTMENT,
Washington, December 3, 1890.

SIR: At a meeting, held yesterday, of the Commission to secure a Site for a Building for the Government Printing Office I was instructed, by resolution, to ascertain whether the title to the west half of square 678, which has been selected, has been perfected, so that the owners of the property can convey a complete and perfect title to the United States.

Respectfully yours,

W. WINDOM,
Secretary.

Hon. W. H. H. MILLER,
Attorney-General, Washington, D. C.

To the foregoing the Attorney-General made this response:

DEPARTMENT OF JUSTICE,
Washington, D. C., December 3, 1890.

DEAR SIR: Your note of this date, in reference to the property under consideration for the Government Printing Office, viz, the west half of square 678, is received. The title has not been perfected.

Yours, truly,

W. H. H. MILLER,
Attorney-General.

Hon. WILLIAM WINDOM,
Secretary of the Treasury.

The efforts of the Commission to obtain a title to the property heretofore described, by negotiation, having failed, the Chairman of the Board asked the Attorney-General to commence proceedings to procure the same by condemnation. The following is a copy of the letter addressed to the Attorney-General:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., December 4, 1890.

SIR: In view of the fact, as stated in your letter of the 3d instant, that the title to the west half of square 678, which has been selected as a site for the Government Printing Office, has not been perfected by the parties offering to sell the same to the Government, I am instructed,

by resolution of the Commission, to ask that proceedings may be instituted as early as possible to procure said property by condemnation, as authorized by law.

Respectfully yours,

W. WINDOM,
Secretary.

Hon. W. H. H. MILLER,
Attorney-General, Washington, D. C.

By the terms of the act under which the Commission were appointed they were authorized to acquire suitable ground for a site for the Government Printing Office by negotiation or condemnation. They were not required to advertise for proposals; but, in order to prevent even the appearance of partiality or unjust discrimination, they authorized the public notice to owners of real estate, a copy of which is furnished in another part of this report. They fixed the boundaries therein described, for the following reasons:

First. Because they believed the public interest would be served by selecting, if possible, a site adjoining or adjacent to the present Government Printing Office.

Second. Because facilities for prompt communication between the Capitol, the several Executive and Judicial Departments, and the Government Printing Office require that the latter shall be at as short a distance from all of the former as possible.

Third. That the property to be purchased should be of such increased area in comparison with the site of the present building as would meet the requirements of this branch of the Government service for the present and a reasonable period in the future.

Fourth. Because the land selected is nearer to all railroad and steamboat lines than the site of the present building, and would thus diminish time and expense in freight transportation.

It will be seen at a glance that the consideration of nearness to the Capitol and the several Departments precluded the practicability of selecting a site north of H street, because such a selection would have increased rather than diminished the distance between the several objective points. The boundary of First street east was as far east as was deemed practicable, without imposing upon employes and the public the necessity of crossing and recrossing the tracks of the Baltimore and Ohio Railway. Ninth street, on the west, and B street north, on the south, were fixed as boundaries in those directions, so that no undue advantage might be taken by property-holders of the general purpose of the Commission to make a selection as near as possible, all other considerations being equal, to the vicinity of the present plant.

The Commission have taken especial pains to investigate the character of the soil on the tract selected, with reference to its fitness for a foundation for the proposed building, and from all sources of information at their command are convinced that a good foundation may be established thereon at a reasonable cost.

The Commission, when they signed in behalf of the Government the articles of agreement herein transmitted, entertained the hope that they might announce the purchase of this property, with good and sufficient title, by negotiation, and thus facilitate the praiseworthy movement inaugurated by Congress for the construction of a fireproof Government Printing Office. But complications affecting the question of title have arisen, so that the Attorney-General has not thus far been able to report exclusive and valid ownership in Mr. Snow, and by unanimous vote of the board the Attorney-General has been requested to commence proceedings for condemnation of the property at the earliest day possible.

The area of the present site of the Government Printing Office is, in round numbers, 66,000 square feet. The site selected by the Commission embraces more than 170,000 square feet, or nearly three times the area of the site now in use.

For convenience of reference, a diagram showing the location of blocks of land in which are located tracts and lots offered as sites for the Government Printing Office is herewith furnished; also, a tabular statement showing the names and numbers of lots and blocks and the prices at which the several pieces of property were offered.

All of which is respectfully submitted.

WILLIAM WINDOM,
Secretary of the Treasury.

F. W. PALMER,
Public Printer.

EDWARD CLARK,
Architect U. S. Capitol.

IN THE SENATE OF THE UNITED STATES.

DECEMBER 19, 1890.—Referred to the Committee on Indian Affairs and ordered to be printed.

Mr. MANDERSON submitted the following

R E S O L U T I O N :

Resolved, That the Committee on Indian Affairs, or any subcommittee thereof appointed by its chairman, is hereby instructed to inquire into the condition of the Indian tribes in the States of North Dakota, South Dakota, Montana, and elsewhere; the cause leading to the occupation of Indian Reservations by United States troops; whether the treaties with said Indians have been fulfilled; to investigate fully the facts concerning the arms and munitions of war in the possession of said Indians, and what steps, legislative and executive, are needed to disarm them and prevent supply of such armament hereafter; also to inquire whether the care and control of Indians living in the tribal relation should be transferred to any other department of the Government, and to report to the Senate by bill or otherwise. Said committee shall have power to send for persons and papers, examine witnesses under oath, employ a stenographer and interpreter, and sit during the session or the recess of the Senate at such times and places as the committee may determine; and the actual and necessary expenses of said investigation to be paid out of the contingent expenses of the Senate upon vouchers approved by the chairman of the committee.

IN THE SENATE OF THE UNITED STATES.

DECEMBER 19, 1890.—Ordered to lie on the table and be printed.

Mr. GRAY submitted the following

RESOLUTION:

Whereas it is impracticable to guard an extended frontier of nearly 4,000 miles between two different jurisdictions and prevent the evasion of high tariff duties; and

Whereas especial consideration is demanded by territorial contiguity, community of language and occupation, similarity of political and social institutions, and the existence of natural markets, rendering it desirable and in every view expedient that a system of reciprocal and free commercial exchanges between the people of the United States and those of the Dominion of Canada, should be adopted; and

Whereas on our southern border our sister Republic of Mexico has long awaited the coöperative legislation of this Government to institute a reciprocal system for the exchange of products of the industries of that country for those of the United States: Therefore be it

Resolved, That for the expansion of the markets for the productions of American skill and industry, the promotion of friendly and neighborly intercourse with those countries whose territorial limits stretch along our northern and southern boundaries, it is hereby recommended to the President of the United States to institute negotiations with the countries of Great Britain and Mexico, whereby in the interests of commercial intercourse and for the strengthening the ties of amity and good neighborhood, the reduction and total repeal of impost duties upon the leading articles of production of the peoples of the respective countries herein named may be effected by their independent and coöperative legislation.

IN THE SENATE OF THE UNITED STATES.

DECEMBER 20, 1890.—Ordered to be printed.

Mr. MORGAN submitted the following

RESOLUTION:

Whereas, in the substitute reported to the Senate for House bill No. 11045, on the 7th of August, 1890, in section 31 of said substitute, it is provided that—

“Sections six hundred and forty-three, six hundred and forty-five, two thousand and seventeen to two thousand and twenty-four, both inclusive, and sections nineteen hundred and eighty-two to nineteen hundred and eighty-seven, both inclusive, and sections two thousand and twenty-seven, and five thousand five hundred and eleven to five thousand five hundred and seventeen, both inclusive, and sections five thousand five hundred and twenty-one to five thousand five hundred and twenty-three, both inclusive, of the Revised Statutes of the United States are each and every of them hereby made a part of this act, and their provisions are made to refer and apply to this act with like force and effect as if this act was specifically mentioned or referred to therein, save as such sections are in terms changed or modified by the provisions of this act.”

And without the incorporation of such changes and modifications of said sections of the existing law into the substitute so reported, it is uncertain what changes are intended to be made therein: Therefore

Resolved by the Senate, That the Committee on Privileges and Elections are hereby directed so to amend section 31 of the proposed amendment as to show what are the changes and modifications in said sections of the existing law, which were intended to be made by the bill so reported by said committee; and to avoid the necessity of again committing said bill and proposed amendment to said committee, that they are instructed to make a supplemental report without delay, showing said changes and modifications in such existing statutes which they recommend and provide for in the amendment reported to the Senate.

IN THE SENATE OF THE UNITED STATES.

DECEMBER 20, 1890.—Ordered to be printed.

Mr. McMILLAN, from the Committee of Conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8243), submitted the following

REPORT:

The Committee of Conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8243) supplementary to an act entitled "An act to authorize the construction of the Baltimore and Potomac Railroad in the District of Columbia," having met, after full and free conference have agreed to recommend, and do recommend, to their respective Houses as follows:

That the Senate recede from its amendment and agree to the House bill, amended to read as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the construction, maintenance, and use for railway purposes of the turn-outs and sidings of the Baltimore and Potomac Railroad Company, now extending from its line between the Anacostia or Eastern Branch of the Potomac River and the Long Bridge, in the city of Washington, into the several squares of ground known and designated on the plat of the city of Washington as follows: Square seven hundred and thirty-seven; square seven hundred and thirty-nine; square six hundred and ninety-five; square northwest of square six hundred and ninety-five; square west of square six hundred and ninety-five; square north of square six hundred and ninety-seven; square east of square six hundred and forty-two; square north of square six hundred and forty-two; square six hundred and forty-one; square five hundred and thirty-six; square four hundred and ninety-three; square south of square four hundred and sixty-three; square four hundred and sixty-four; square three hundred and eighty-six; square two hundred and sixty-seven, and square south of square two hundred and sixty-seven, is hereby authorized, but Congress may at any time revoke said authority, said tracks to be maintained in such manner as will least obstruct the public streets, avenues, or alleys on which said tracks are laid, and to be under the general supervision of the Commissioners of the District of Columbia.

"SEC. 2. That it shall be the duty of the Commissioners of the District of Columbia, and they are hereby authorized and empowered, whenever they consider it a public benefit, to grant the Baltimore and Potomac Railroad Company permission to lay, maintain, and use side-tracks and sidings from the main line or lines of said railroad into any real estate in the said city abutting on the streets or avenues on which such line of such company is or may be situated, east of Four-and-a-half street and south of Virginia and Maryland avenues, which may be used or

occupied for manufacturing, commercial, or other business purposes by parties desiring the use of such facilities. Such side-tracks or sidings shall be laid and maintained under the direction of said Commissioners, and in such manner as shall least obstruct the use of the public streets for ordinary purposes: *Provided*, That the right to revoke the use of said side-tracks or sidings is reserved to Congress.

“SEC. 3. That the Baltimore and Potomac Railroad Company is hereby authorized and empowered to acquire, subject to the approval of said Commissioners, for the purposes of its business, any one or more of the squares of ground in the city of Washington south of the line of the said railroad and north of L street and east of Delaware avenue and north of the Eastern Branch and east of Thirteenth street southeast, and any one or more squares, as shall be approved by the said Commissioners, abutting on the line of said railroad on Maryland and Virginia avenues, east of Four-and-a-half street and south of its main track on Virginia avenue, and west of Twelfth street southwest, and to extend, maintain, and use tracks from convenient points on the line of said railroad into the said property, and to cross such streets as may be necessary for that purpose, and to construct thereon such facilities as may be necessary for its business as a common carrier, and approved by said Commissioners, and to maintain such facilities in connection therewith; such tracks, where they cross streets, to be laid and maintained under the direction of the Commissioners of the District of Columbia, and in such manner as shall least obstruct the use of said streets for ordinary purposes. The right to remove such tracks is hereby reserved to Congress. And in case said company shall be unable for any reason to acquire such properties or any portion thereof by purchase they may be acquired by said company in the manner provided by sections numbered from six hundred and forty-eight to six hundred and sixty-three, both inclusive, of the Revised Statutes, relating to the District of Columbia; but nothing herein contained shall authorize the condemnation of any church or school property or property of the United States: *Provided*, That nothing contained in this act, and no expenditure that may be made by said railroad company hereunder, shall be held or construed to give said company any right, legal or equitable, not now possessed to retain the passenger station of said company on Sixth street.

“SEC. 4. That Congress hereby reserves the right to alter, amend, or repeal this act.”

And the House agree to the same.

LOUIS E. ATKINSON,
JNO. T. HEARD,
Managers on the part of the House.
JAMES McMILLAN,
C. B. FARWELL,
ISHAM G. HARRIS,
Managers on the part of the Senate.

IN THE SENATE OF THE UNITED STATES.

DECEMBER 22, 1890.—Presented, referred to the Committee on Appropriations, and ordered to be printed.

COMMUNICATION FROM THE AUDITOR OF THE TREASURY
RECOMMENDING PASSAGE OF A BILL TO ALLOW COMPENSA-
TION FOR EXTRA SERVICES RENDERED BY EMPLOYÉS OF
THAT OFFICE FROM JULY 1, 1887, TO SEPTEMBER 30, 1888.

OFFICE OF THE AUDITOR OF THE TREASURY
FOR THE POST OFFICE DEPARTMENT,
Washington, D. C., December 18, 1890.

SIR: At the request of employés of this Bureau, who are interested in a claim for compensation for extra services rendered from July 1, 1887, to September 30, 1888, as set forth in Ex. Doc. No. 137, House of Representatives, Fiftieth Congress, second session, I take pleasure in recommending that said bill may be taken up and receive favorable consideration by Congress at this session.

While said services were rendered during the administration of my predecessor, I have learned that the services were actually performed and rendered necessary by a great increase of work without any increase of clerical force, as stated in a letter by my predecessor dated February 11, 1889.

I would also respectfully refer to the precedents for this action by Congress in the act of Congress granting compensation to clerks and other employés of the Adjutant-General's Office and of the Surgeon-General's Office, War Department, for extra hours of duty required of them in 1887, approved October 19, 1888, and the act of Congress granting compensation to employés of the Post-Office Department for extra hours of labor from April 11, 1885, approved September 28, 1890.

Inclosed herewith is a statement in tabular form of the amounts due each employé, and also copies of letters of my predecessor and Ex-Secretary Fairchild, recommending this legislation.

Very respectfully,

T. B. COULTER,
Auditor.

Hon. LEVI P. MORTON,
President of the United States Senate, Washington, D. C.

TREASURY DEPARTMENT, *February 13, 1889.*

SIR: I have the honor to transmit to the House of Representatives a communication from the Sixth Auditor, of the 11th instant, and a petition of the employés in his office, praying that an appropriation be made by Congress to pay them compensation

COMPENSATION FOR EXTRA SERVICES.

for extra service rendered under the direction of the Auditor from July 1, 1887, to September 30, 1888, inclusive.

Respectfully, yours,

C. S. FAIRCHILD,
Secretary.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

OFFICE OF THE AUDITOR OF THE TREASURY,
FOR THE POST-OFFICE DEPARTMENT,
Washington, D. C., February 11, 1889.

SIR: I have the honor to forward to you the inclosed petition of the employés in this Bureau for compensation for extra work performed from July 1, 1887, to September 30, 1888, inclusive. I also forward the time report, showing the number of extra hours worked by each employé.

In the time report I have omitted the names of all employés whose absence with pay exceeded the usual thirty days added to extra hours worked by them, as I consider in these cases they have already received the extra compensation.

The great increase of the current work in this Bureau, without any increase of clerical force for the three years last past, made it absolutely necessary for the extra labor of the employés, and when I requested it should be done it was performed by the great majority of the employés willingly and cheerfully, as they fully appreciated the situation.

I respectfully commend their petition, and trust you will forward it to Congress with your approval.

Respectfully,

D. McCONVILLE,
Auditor.

Hon. C. S. FAIRCHILD,
Secretary of the Treasury, Washington, D. C.

IN THE SENATE OF THE UNITED STATES.

DECEMBER 23, 1890.—Ordered to be printed.

Mr. ALDRICH submitted the following

RESOLUTION:

Resolved, That for the remainder of this session the rules of the Senate be amended by adding thereto the following:

When any bill, resolution or other question shall have been under consideration for a reasonable time it shall be in order for any Senator to demand that debate thereon be closed. On such demand no debate shall be in order, and pending such demand no other motion except one motion to adjourn shall be made. If such demand be seconded by a majority of the Senators present, the question shall forthwith be taken thereon without debate. If the Senate shall decide to close debate on any bill, resolution, or other question, the measure shall take precedence of all other business whatever, and the question shall be put upon the amendments, if any then pending, and upon the measure in its successive stages according to the rules of the Senate, but without further debate, except that every Senator who may desire shall be permitted to speak upon the measure, including all amendments, not more than once, and not exceeding thirty minutes.

After the Senate shall have decided to close debate as herein provided, no motion shall be in order but a motion to adjourn or to take a recess, when such motions shall be seconded by a majority of the Senate. When either of said motions shall have been lost or shall have failed of a second, it shall not be in order to renew the same until one Senator shall have spoken upon the pending measure, or one vote upon the same shall have intervened.

Pending proceedings under the foregoing rule no proceeding in respect of a quorum shall be in order until it shall have appeared on a division or on the taking of the yeas and nays that a quorum is not present and voting.

Pending proceedings under the foregoing rule all questions of order, whether upon appeal or otherwise, shall be decided without debate, and no obstructive or dilatory motion or proceedings of any kind shall be in order.

For the foregoing stated purposes the following rules, namely: VII, VIII, IX, X, XII, XIX, XXII, XXVII, XXVIII, XXXV, and XL are modified.

IN THE SENATE OF THE UNITED STATES.

DECEMBER 30, 1890.—Ordered to be printed.

AMENDMENT

Intended to be proposed by Mr. Reagan to the resolution of Mr. Aldrich (Mis. Doc. No. 33) proposing certain amendments to the rules of the Senate, viz: Amend the resolution to close debate by striking out the sentence beginning on line 21 and ending on line 24, and inserting the following in lieu thereof:

After the Senate shall have decided to close debate as herein provided no motion shall be in order except a motion to amend the pending bill, and five minutes debate may be allowed for and five minutes against such amendment, or a motion to adjourn or to take a recess.

And by striking out of line 25 the words, "or shall have failed of a second."

○

IN THE SENATE OF THE UNITED STATES.

DECEMBER 30, 1890.—Ordered to be printed.

AMENDMENT

Intended to be proposed by Mr. Reagan to the resolution of Mr. Aldrich (Mis. Doc. No. 33) proposing certain amendments to the rules of the Senate, viz:

Amend the resolution to close debate by striking out all of the paragraph beginning with line 29 and ending with line 32.

○

IN THE SENATE OF THE UNITED STATES.

DECEMBER 24, 1890.—Ordered to lie on the table and be printed.

Mr. MITCHELL submitted the following

RESOLUTION:

Resolved, That the Committee on the Judiciary be, and it is hereby, instructed to inquire as to the date when under existing legislation the acts now in force relating to the restriction of Chinese immigration into this country expire—whether in 1892 or 1894; and also as to whether the Chinese exclusion act of 1888, commonly known as the “Scott act,” will have any force or effect, and if so, in what respect and to what extent, after the restriction acts referred to shall have expired by the provisions of their own limitation.

○

IN THE SENATE OF THE UNITED STATES.

DECEMBER 29, 1890.—Ordered to be printed.

Mr. FAULKNER submitted the following

RESOLUTION:

Resolved, That the Superintendent of the Census be instructed to furnish the Senate information of the population of each county of the State of West Virginia, as shown by the returns filed in his office, and upon which he has officially declared the aggregate population of said State by Census Bulletin No. 16.

○

IN THE SENATE OF THE UNITED STATES.

DECEMBER 29, 1890.—Presented, referred to the Committee on Public Lands, and ordered to be printed.

RESOLUTION OF THE LEGISLATIVE ASSEMBLY OF THE TERRITORY OF OKLAHOMA RECOMMENDING THE PASSAGE OF AN ACT AUTHORIZING THE LEASING OF PUBLIC LANDS HELD FOR THE BENEFIT OF PUBLIC SCHOOLS.

TERRITORY OF OKLAHOMA,
EXECUTIVE OFFICE,
Guthrie, December 24, 1890.

To the President of the Senate of the United States:

I have the honor to inform you that the following is a true copy of a resolution unanimously adopted by the legislative assembly of the Territory of Oklahoma this day.

It is sincerely hoped favorable action may be taken thereon by your honorable body.

Very respectfully,

GEO. W. STEELE.

HOUSE CONCURRENT RESOLUTION NO. 25.

Whereas the sixteenth and thirty-sixth sections of the public lands of the Territory of Oklahoma are reserved by the United States from settlement and intended to be held for the benefit of the public schools; and

Whereas said lands are now being entered upon and occupied in clear violation of law; and

Whereas the people of said Territory are very much in need of funds for the purpose of establishing and maintaining a system of public schools; and

Whereas quite a considerable sum of money might be raised annually for that purpose from rents of said school lands: Therefore be it

Resolved by the legislative assembly of the Territory of Oklahoma, That Congress be memorialized to pass an act authorizing the leasing of said school land, and that an enrolled copy of this resolution, signed by the speaker of the house, the president of the council, and the governor, be by the governor forwarded each to the President of the United States Senate, the Speaker of the House of Representatives, and to the Hon. D. A. Harvey, our Delegate to Congress.

C. G. JONES,
Speaker pro tem. of the House of Representatives.
G. W. GARDESSHIRE,
President of the Council.

Approved December 24, 1890.

GEO. W. STEELE,
Governor.

IN THE SENATE OF THE UNITED STATES.

DECEMBER 29, 1890.—Ordered to be laid on the table and printed.

Mr. MITCHELL presented the following

MEMORIAL OF THE CHAMBER OF COMMERCE OF PORTLAND,
OREGON, REFERRING TO THE TORREY BANKRUPT BILL AS A
JUST AND WISE MEASURE AND DEMANDING ITS EARLY EN-
ACTMENT.

CHAMBER OF COMMERCE OF PORTLAND, OREGON.

T. F. OSBORN, President.

SAMUEL HEITSHU, First vice-president.

D. D. OLIPHANT, Secretary.

WILLIAM KAPUS, Second vice-president.

W. S. LADD, Treasurer.

PORTLAND, OREGON, *December 17, 1890.*

To the Congress of the United States:

Your memorialist, the Portland, Oregon, Chamber of Commerce, respectfully represents that Congress ought to exercise, without delay, the power conferred solely upon it by the Federal Constitution to enact uniform laws upon the subject of bankruptcy, for reasons as follows:

(1) The attempted enactment and enforcement by the several States of bankruptcy laws have necessarily been unsuccessful, because the power to do so was reserved to Congress. Even if it were possible for the several States to provide by legislation for the administration of the estates of dishonest and insolvent debtors and the discharge of honest bankrupts, it would be impracticable for them to act with such uniformity as would be necessary to best serve the interests of commerce. It is therefore necessary to have Congress enact a uniform bankrupt law because of the reservation in the Constitution, as well as the impracticability of State legislation upon the subject.

(2) The fact that the several States have attempted to legislate for the protection of the commercial credit of their citizens, and the adjustment of the differences which arise in the course of commercial transactions, constitutes an earnest and vehement protest against the failure of Congress to place upon the national statute books a permanent bankrupt law:

(3) The citizens of the States who reside at long distances from the centers of trade are particularly interested in the enactment of a law which shall be a guaranty to the persons from whom they purchase their supplies that at least a part of the purchase price will be paid. The existence of such a law would in effect increase the capital invested in business by them as it would extend their credit and make it possible for them to buy larger quantities of goods, and enable them to purchase their goods at a lower price, and, as a consequence, they would be able to sell them at a corresponding lower price to the consumer.

(4) In the Western and newly-settled States there is greater hazard in doing business than in the older States, and in the event of failure under circumstances which render a continuation of business impossible

there is less opportunity for obtaining employment in a subordinate capacity than in the older communities, where the occupations are more diversified, and, as a consequence, it is of the utmost importance that men who have honestly failed in their enterprise should be discharged and given an opportunity to start afresh in their multifarious enterprises for the development of the wonderful resources of the country.

(5) The multifarious transactions which constitute commerce are voluntarily entered into. It is not possible to compel an individual, firm, or corporation to become either a debtor or a creditor. The transactions entered into upon credit beget a debtor and a creditor. The obligation of the one and the claim of the other are identical in amount, and as a result, the aggregate amount owed by the debtors is exactly balanced by the aggregate amount due the creditors. The two classes are of equal importance and neither should be favored in a legislative way, but both classes should have reciprocal rights and responsibilities. It would therefore be manifestly wrong and hurtful of the best interests of both classes for a law to be passed providing for a voluntary to the exclusion of an involuntary system or the reverse.

In view of all which, be it

(1) *Resolved*, That the reservation to Congress by the Constitution of the United States of the right to pass a bankrupt law imposes an obligation to do so.

(2) *Resolved further*, That the attention of Congress is called to the fact that the several States have attempted to protect the rights of their citizens by the enactment of insolvency laws, and that these attempts constitute a demand for the enactment, without delay, of a uniform, equitable law.

(3) *Resolved further*, That the best interests of the citizens of all parts of the country, and particularly in the States most distant from the great commercial centers, will be benefited by the passage of a law designed to prevent the perpetration of fraud, punish wrong doers, extend commercial credit between the members of the commercial world, promote and foster commerce, and discharge honest insolvents from the burden of their indebtedness over the amounts paid in dividends by their estates.

(4) *Resolved further*, That the energetic, enterprising citizens of the United States who have performed the pioneer work of developing the great industries and resources of the new States ought to have, in the event of honest misfortune, the benefits of the relief provided by an equitable bankrupt law.

(5) *Resolved further*, That we protest against the enactment of a voluntary to the exclusion of an involuntary bankrupt law, and *vice versa*, and earnestly petition for one which shall be comprehensive of the whole subject by providing for both voluntary and involuntary bankruptcy.

(6) *Resolved further*, That the Torrey bankrupt bill, as passed by the House of Representatives, and now pending in the Senate, is a just and wise measure and the embodiment of the legislation authorized by the Constitution of the United States on the part of Congress, and its enactment is therefore earnestly demanded.

(7) *Resolved further*, That copies of this memorial be sent to the Senators and Representatives from Oregon.

[SEAL.] THE CHAMBER OF COMMERCE OF PORTLAND, OREGON.

By WM. KAPUS, *Vice-President*.

Attest:

D. D. OLIPHANT,
Secretary.

IN THE SENATE OF THE UNITED STATES.

JANUARY 6, 1891.—Referred to the Committee on Indian Affairs and ordered to be printed.

Mr. PLUMB presented the following

MEMORIAL OF THE DELEGATES OF THE CREEK NATION OF INDIANS PRAYING FOR THE PASSAGE OF THE BILL (H. R. 6849) PROVIDING FOR THE PAYMENT OF AWARDS MADE TO CREEK INDIANS WHO ENLISTED IN THE FEDERAL ARMY, LOYAL REFUGEES, AND FREEDMEN:

To the Senate and House of Representatives of the United States of America:

The undersigned delegates of the Creek Nation are charged by those Creeks who enlisted in the Federal Army, loyal refugees and freedmen, with the duty of presenting and urging upon the attention of and settlement by Congress of the claims of those individuals against the Government of the United States, and in doing so we respectfully beg leave to invite your attention to the following facts, which will be stated as briefly as possible, consistent with the rights and interests involved:

THE FACTS IN THE CASE.

In 1861 a portion of the Creek Indians entered into a treaty with the so-called Confederate States, but a very large minority of the nation refused to join in that treaty, but relying in good faith upon the guaranties of their treaties with the United States, separated from their brothers, leaving their homes, property, and country, and sought the lines of the Federal Army for that protection which they had failed to secure at home. All the able-bodied men who went North joined the Federal Army, leaving the old men, women, and children to be cared for by the agents of the United States.

The Creeks had been in their home in the Indian Territory for a long time and were in an advanced state of civilization. They had good houses and large farms inclosed with good fences; they had immense herds of cattle and horses, and all the comforts and many of the luxuries of civilized life. Their houses were burned, their fences destroyed, and fields laid waste by those who were hostile to the Government of the United States and opposed to their going North, and their vast herds of cattle and horses were stolen and driven to Kansas and sold or taken to feed the United States Army, and to cattle brokers who speculated and fattened upon their misfortunes. These facts are substantiated by the records of the Interior and War Departments and would be referred to here if it were not for their prolixity.

Prominent men, merchants, military officers, Indian agents, traders, and others were charged as being implicated in this nefarious traffic. The fact that these open and glaring frauds had been committed upon these Indians by prominent people was one of the main causes which brought about the "treaty of cession and indemnity" of 1866 between the Creeks and the United States, and one of the objects of which was to indemnify these people for their losses; and this brings us to the consideration of the provisions of that treaty and certain antecedent treaty provisions and acts of Congress bearing upon the question.

TREATY OF 1866, ARTICLE 3, 14 STATUTES, 786.

By the third article of the treaty of 1866 the Creek Nation ceded, for the purposes therein stated, the western half of their entire domain, and the consideration therefor was to be disposed of as set forth therein, \$100,000 of which was to be paid to the soldiers who enlisted in the Federal Army and the loyal refugees, Indians, and freedmen who were driven from their homes by the rebel forces, to reimburse them in proportion to their respective losses. The fourth article of said treaty reads as follows, to wit:

Immediately after the ratification of this treaty the United States agree to ascertain the amount due the respective soldiers who enlisted in the Federal Army, loyal refugee Indians, and freedmen, in proportion to their several losses, and to pay the amount awarded each in the following manner, to wit: A census of the Creeks shall be taken by the agent of the United States for said nation, under the direction of the Secretary of the Interior, and a roll of the names of all soldiers who enlisted in the Federal Army, loyal refugee Indians, and freedmen, be made by him. The superintendent of Indian affairs for the southern superintendency and the agent of the United States for the Creek Nation shall proceed to investigate and determine from said roll the amounts due the respective refugee Indians, and shall transmit to the Commissioner of Indian Affairs for his approval, and that of the Secretary of the Interior; their awards so made shall be duly approved; said awards shall be paid from the proceeds of the sale of said lands within one year from the ratification of this treaty, or so soon as said amount of one hundred thousand dollars (\$100,000) can be raised from the sale of said land to other Indians.

The provisions of that article were carried out, and General W. B. Hazen, U. S. Army, Superintendent of Indian Affairs, and Capt. F. A. Field, United States Indian agent, made final report under date of April 30, 1870, accompanied by abstract of claims and awards, with the evidence upon which their action was based.

Claims were presented to them amounting in the aggregate to \$5,090,808.50, and the sum total of their allowance was \$1,836,830.41, and thereafter the Secretary of the Interior paid the \$100,000 to the claimants in proportion to their respective losses, each person receiving a fraction over 5 cents on the dollar of the amount found due him, and this 5 cents on the dollar was paid to them out of their own funds.

At the time the treaty of 1866 was made the \$100,000 item was explained to them as only a payment in part. The fourth article was explained to and understood by them as providing a means of ascertaining the amount of their losses, for which they should be paid in full; that the eleventh article had reference to annuities which had been diverted, under the joint resolution of February 22, 1862 (12 Statute, 614), the act of July 5, 1862 (Id., 528), the act of March 3, 1863 (Id., 793), and the act of June 24, 1864 (13 Statute, 180), and other claims of a national character, and that article 12 confirmed all their rights under article 18 of the treaty of 1856; and under these circumstances the representatives of our people signed the treaty of 1866.

ARTICLE 18, TREATY OF 1856, 11 STATUTE, 704.

Now, we desire to invite your attention to the eighteenth article of the treaty of 1856 between the United States and the Creeks and Seminoles, whereby it was agreed that—

The United States shall protect the Creeks and Seminoles from domestic strife, from hostile invasion, and from aggression from other Indians and white persons not subject to their jurisdiction and laws; and for all injuries resulting from such invasion or aggression full indemnity is hereby guaranteed to the party or parties injured, out of the Treasury of the United States, upon the same principles and according to the same rules which white persons are entitled to indemnity for injuries or aggressions upon them committed by Indians.

This article brought the Creek and Seminole Indians within the provisions of the seventeenth section of the act of June 30, 1834, and known as the intercourse laws, which provides, in substance, that when a white person shall have property stolen or destroyed by Indians, such white person shall receive full payment therefor out of the annuities of the nation or tribe of Indians to which the Indians committing the depredations belong; but if such tribe or nation has no annuity, then the amount to be paid out of the Treasury of the United States. The last clause of this act was repealed by the 8th section of the act of February 28, 1859 (11 Statute, 401), but the liability of the United States in this class of claims was again recognized by the last clause of section 7 of the act of May 29, 1872, which provides that no payment on account of such claims shall be made without a specific appropriation therefor by Congress, and the Government of the United States has at various times since adjudicated and paid claims of this class.

DEPREDATION AGAINST THE PERSON AND PROPERTY OF INDIANS.

Claims of Indians for depredations committed by white persons come within the purview of sections 2154 and 2155 of the United States Revised Statutes, which provide, in substance, that when a white person shall be convicted of the commission of any crime or offense in the Indian country, and by reason of such crime or offense the property of any friendly Indian is taken, injured, or destroyed, he shall pay a sum equal to twice the value of the property so taken, injured, or destroyed, and if such offender can not be apprehended and brought to trial, the amount of such property shall be paid out of the Treasury.

There is an item in the act of July 5, 1862 (12 Statutes, 528), which provides:

That in case where the tribal organization of any Indian tribe shall be in actual hostility to the United States, the President is hereby authorized, by proclamation, to declare all the treaties with such tribe to be abrogated by such tribe, if, in his opinion, the same can be done consistently with good faith and legal national obligations.

Now, as a matter of fact, that great wise man and noble-hearted President, Abraham Lincoln, seeing that "good faith and legal and national obligations" toward a very large minority of the Creek Nation of Indians who were loyal to the Government of the United States, would be violated by the exercise of the authority vested in him, never issued the required proclamation, in consequence of which all treaty provisions with the Creek Nation remained in full force and effect. We desire to invite particular attention to the fact that the proclamation was never issued, as we shall take occasion to refer to it further on.

The matter of the claims of these Indians was before the Court of Claims (Thomas Connor, *et al.* v. The United States, 19 Court of Claims, 675), in which case, relying on an imperfect statement of the facts, the

court "decided as a conclusion of law that all claims which the petitioners had against the United States for damages and losses growing out of the late rebellion were adjusted, settled, and released by the treaty of 1866, and the payment thereunder of \$100,000, as provided in article 3, and that the claimants, having received that sum are not entitled to be paid any further amount," and further the court says:

The course of procedure taken by the Commissioner of Indian Affairs and the Secretary of the Interior in relation thereto, were in strict conformity with the treaty obligations, and the claimants, having received each his proportion according to his losses of the money awarded for that purpose, they are entitled to no more.

If there should have been added to the sentence just quoted the words "out of the funds of the Creek Nation," we could not question the conclusions of the court, for that was the only fund mentioned in the treaty and the only one under consideration by the court.

The court again says it is true that the twelfth article of the treaty of 1866 does declare—

The United States reaffirms and reassumes all obligations with the Creek Nation entered into before the treaty of said Creek Nation with the so-called Confederate States, July 10, 1861, not inconsistent herewith.

But the effect of that provision was clearly to renew the former treaties from that date, and nothing more. It would be an unreasonable interpretation to put upon it that the United States agreed to be responsible for all obligations on their part contained in the treaties during the time the Creek Nation was, with other public enemies, at war with them, and yet, while making a new treaty, they provided the means of settling such obligations in part, as contended by the claimants.

The eleventh article of the treaty of 1866 expressly declares that—

The stipulations of this treaty are to be in full settlement of all claims of said Creek Nation for damages and losses of every kind growing out of the late rebellion.

It is urged by the claimants that this provision applies only to national claims, while their demands are individual and personal. But that position is not warranted by the law or facts in the case. The claims of individual members who bring this action were claims of the nation within the rules of international law. (Great Western Insurance Company, case 206, *ante*.) Moreover, their payment as agreed upon was provided for by the treaty itself.

Now, we desire to show that the reasons and rulings of the court are inconsistent with the law and facts in the case.

First. The court held that the provisions of article 12 of the treaty of 1866, reaffirming and reassuming former treaty obligations, was to "renew" such obligations "from that date." This, we submit, is in violation of all rules of construction. The President of the United States never having issued his proclamation abrogating the treaties with the Creeks, all treaty provisions theretofore made were still in full force and effect at the date of the treaty of 1866, and no provision of treaty was "renewed" from that or any other date. The United States simply reaffirmed and reassumed certain obligations. It was an agreement that the former treaty stipulations not inconsistent with those of the treaty of 1866 should still remain in force. Nothing more and nothing less. The twelfth article of the treaty of June 14, 1866, specially confirms all previous treaty obligations not inconsistent with that one. (H. R. Report 78, Forty-second Congress, third session, page 302.)

Second. We believed the court erred in its construction of the eleventh article of the treaty of 1866 in holding that these claims were claims of the nation. The very article of the treaty under consideration

by the court contradicts this construction. That article recognizes and defines these claims as individual and personal and not national. The assertion of the claimants that the eleventh article of the treaty of 1866 relates to national claims is correct. That article says, "all claims of the Creek Nation," and not claims of individuals.

It seems very plain to us that the object of the treaty of 1866 was to ascertain the amount of the losses sustained by these people to the end that they might receive their pro rata share, in proportion to their losses, of the \$100,000 chargeable against the general Creek fund, and that the balance of the amount should be a charge against the United States under the 18th article of the treaty of 1856, and it was so explained to them at the time. Rules of interpretation favorable to the Indian tribes are to be adopted in construing our treaties with them (U. S. Supreme Court, 7 Wall., 737), and we submit that under that article, which is still in full force and effect, without at all considering the third and fourth articles of the treaty of 1866, the United States is bound to these people for every dollar of the losses sustained by them.

We further submit that, without considering any provision of treaty between the United States and the Creek Nation, the United States are bound to these people for the amount awarded them by virtue of the same laws, and in the same sense of justice and equity, under which the United States has assumed and paid like losses sustained by white men.

The sum of \$1,836,830.41 awarded to these people would not, by a large amount, cover the value of their cattle taken to subsist the United States Army.

The United States Supreme Court, in the case of *Wright vs. Tibbitts* (91 U. S. R., 252), held that a commission appointed under the Choctaw and Chickasaw treaty of 1866, for a purpose similar to that for which General Hazen and Captain Field were designated under the Creek treaty of 1866, was a *quasi* court. It was, in no material respect, for all the purposes of this controversy, different from the "Court of Commissioners of Alabama Claims," of the "Southern Claims Commission," or "the Mexican Claims Commission," or "Spanish Claims Commission," which have been called together, in pursuance of treaty stipulations or otherwise, to settle and adjust disputed claims, for the purpose of their ultimate payment and satisfaction.

This case is particularly applicable to the claims of the persons we represent. When the Commission, the "quasi court," passed upon these claims, they assumed the nature of an ascertained debt, "for the purpose of their ultimate payment and satisfaction."

What a travesty on justice, reason, and common sense it would be for the United States to say to these people:

"You were loyal; you were patriotic; you were driven from your homes; your houses were burned and your stock stolen and driven off; you served in the Army of the United States at the time of the Government's greatest need; you sacrificed home and country, and espoused the cause of the Union, and by reason of all this you lost property to the value of more than \$5,000,000, accumulated by long years of thrift and industry, and a large amount of which was taken to subsist the Army in which you battled for the rights of the Government of the United States. Now the United States will purchase a portion of your lands, owned absolutely by you, and out of the consideration to be paid therefor, your own money, too, the Government will take \$100,000 and pay you that amount for the \$5,000,000 worth of property lost by you. You shall suffer this loss as a penalty for your loyalty, your patriotism,

and your service to the Government of the United States. That is the settlement the Government will make with you. The persons who were legally appointed and constituted to investigate your losses scaled them down from \$5,000,000 to \$1,800,000; the Government will further scale them down to \$100,000, and then pay you that sum out of your own money."

We do not believe that your sense of honor and justice will permit you to take this view of the matter, but that in the consideration of these claims you will adopt that broader, more humane, more comprehensive, and more dignified policy which should be adopted by a great Government toward an inferior and wronged people, who, while owing it no allegiance, were second to none of your best citizens in loyalty, patriotism, and devotion to your Government. We further believe that in dealing with the rights of these people you will deal with them as you would deal with the rights of other persons, according to a reasonable, just, and fair interpretation of the contract made with them, constantly bearing in mind that your Government occupies to these claimants the relation of guardian to ward, and that you will carefully and jealously guard, adjust, settle, and pay the amount of the awards to these people, made in conformity with solemn treaty stipulation.

Since the happy and fortunate hour in which these claimants were released from military duties, in consequence of peace restored and the creation of the treaty of 1866, under which these awards were made, the men who served in the Army of the United States have in the ordinary course of nature been passing to the stillness of the grave. Let those who still survive receive your benediction of justice before they pass to "that undiscovered country from whose bourne no traveler returns."

Your petitioners and memorialists therefore respectfully and most earnestly pray that as a means of settlement of these legal claims, as well as a matter of justice, equity, and good faith, your honorable bodies will enact into a law House bill No. 6849, entitled "A bill providing for the payment of awards made to Creek Indians who enlisted in the Federal Army, loyal refugees, and freedmen."

D. M. HODGE,

THOMAS + KNIGHT,
mark.

National Delegates and Agents of the Loyal Creeks.

IN THE SENATE OF THE UNITED STATES.

JANUARY 8, 1891.—Referred to the Committee on Appropriations and ordered to be printed.

Mr. TELLER presented the following newspaper communication of Sheldon Jackson, urging the importation by the Government of the Siberian reindeer into Alaska Territory for the benefit and relief of the inhabitants of that Territory.

Alaska—Starvation ahead—Domesticate the reindeer and save the people—Moss meadows are the reindeer's pastures—In ten years they increase thirteen times—The Bear will bring them from Siberia—An agricultural experiment station wanted.

From time immemorial the Alaskans have lived upon the whale, the walrus, and the seal of their coasts, the fish and the aquatic birds of their rivers, and the caribou or wild reindeer of their vast inland plains.

The supply of these in years past was abundant and furnished ample food for all the people.

WHALES ARE DISAPPEARING.

But fifty years ago American whalers, having largely exhausted the supply in other waters, found their way into the Northern Pacific Ocean. Then commenced for that section the slaughter and destruction of whales that went steadily forward at the rate of hundreds and thousands annually, until they were destroyed and driven out of the Pacific Ocean. They were then followed into Bering Sea and the slaughter went on. The whales took refuge among the ice fields of the Arctic Ocean and thither the whalers followed. In this relentless hunt the remnant have been driven still farther into the inaccessible regions around the North Pole and are no longer within reach of the natives.

As the great herds of buffalo that once roamed the western prairies have been exterminated for their pelts, so the whales have been sacrificed for the fat that encased their bodies and the bone that hung in their mouths. With the destruction of the whale one large source of food supply for the natives has been cut off.

SO ARE WALRUSES.

Another large supply of food was derived from the walrus, which once swarmed in great numbers in these northern seas. But commerce wanted more ivory, and the whalers turned their attention to the walrus, destroying thousands annually for the sake of their tusks. Where a few years ago they were so numerous that their bellowings were heard above the roar of the waves and grinding and crashing of the ice fields, this year I cruised for weeks without seeing or hearing one. The walrus as a source of food supply is already practically extinct.

The seal and sea lion, once so common in Bering Sea, are now becoming so scarce that it is with difficulty that the natives procure a sufficient number of skins to cover their boats, and their flesh, on account of its rarity, has become a luxury.

CANS CANNIBALIZE THE SALMON.

In the past the natives, with tireless industry, caught and cured for use in their long winters great quantities of fish, but American canneries have already come to some of their streams, and will soon be found on all of them, both carrying the food out of the country and, by their wasteful methods, destroying the future supply. Five million cans of salmon annually shipped away from Alaska—and the business still in its infancy—means starvation to the native races in the near future.

With the advent of improved breech-loading firearms the wild reindeer are both being killed off and frightened away to the remote and more inaccessible regions of the interior, and another source of food supply is diminishing.

Thus the support of the people is largely gone and the process of slow starvation and extermination has commenced along the whole Arctic coast of Alaska. Villages that once numbered thousands have been reduced to hundreds; of some tribes but two or three families remain. At Point Barrow, in 1828, Captain Beechey's expedition found Nuwuk, a village of 1,000 people; in 1863 there were 309; now there are not over 100. In 1826 Captain Beechey speaks of finding a large population at Cape Franklin; to-day it is without an inhabitant. He also mentions a large village of 1,000 to 2,000 people on Schismareff Inlet; it has now but 3 houses.

ARCTIC ESQUIMAUX DECREASING.

According to Mr. John W. Kelly, who has written a monograph upon the Arctic Esquimaux of Alaska, Point Hope, at the commencement of the century, had a population of 2,000; now it has about 350. Mr. Kelly further says:

The Kavea country is almost depopulated, owing to the scarcity of game, which has been killed or driven away. * * * The coast tribes between Point Hope and Point Barrow have been cut down in population so as to be almost obliterated. The Kookpovoros of Point Lay have only three huts left; the Ootookas of Icy Cape, one hut; the Koogmute has three settlements of from one to four families; Sezaro has about eighty people.

Mr. Henry D. Woolfe, who has spent many years in the Arctic region, writes:

Along the sea coast from Wainright Inlet to Point Lay numerous remains of houses testify to the former number of the people. * * * From Cape Seppings to Cape Krusenstern and inland to Nounatok River there still remain about forty people—the remnant of a tribe called Key-wah-ling-nach-ah-mutes. They will in a few years entirely disappear as a distinctive tribe.

I myself saw a number of abandoned villages and crumbling houses during the summer, and wherever I visited the people I heard the same tale of destitution.

On the island of Attou, once famous for the number of its sea-otter skins, the catch for the past nine years has averaged but three sea-otter and twenty-five fox skins, an annual income of about \$2 for each person. The Alaska Commercial Company this past summer sent \$1,300 worth of provisions to keep them from starving.

At Akutan the whole catch for the past summer was nineteen sea otters. This represents the entire support of one hundred people for twelve months. At Unalaska both the agent of the Alaska Commercial Company and the teacher of the Government school testified that there would be great destitution among the people this winter because of the disappearance of the sea otter. At St. George Island the United States Treasury agent testified that there was not sufficient provision on the island to last through the season, and asked that a Government vessel might be sent with a full supply. At Cape Prince of Wales, Point Hope, and Point Barrow was the same account of short supply of food. At the latter place intimations were given that the natives in their distress would break into the Government warehouse and help themselves to the supply that is in store for shipwrecked whalers. At Point Barrow, largely owing to the insufficient food supply, the death rate is reported to the birth rate as 15 to 1. It does not take long to figure out the end. They will die out more and more rapidly as the already insufficient food supply becomes less and less.

THE REINDEER IS EVERYTHING.

In this crisis it is important that steps should be taken at once to afford relief. Relief can, of course, be afforded by Congress voting an appropriation to feed them, as it has so many of the North American Indians. But every one familiar with the feeding process among the Indians will devoutly wish that it may not be necessary to extend that system to the Esquimaux of Alaska. It would cost hundreds of thousands of dollars annually, and, worse than that, degrade, pauperize, and finally exterminate the people. There is a better, cheaper, more practical and more humane way, and that is to introduce into northern Alaska the domesticated reindeer of Siberia, and train the Esquimaux young men in their management, care, and propagation.

This would in a few years create as permanent and secure a food supply for the Esquimaux as cattle or sheep raising in Texas or New Mexico does for the people of these sections.

It may be necessary to afford temporary relief for two or three years to the Esquimaux, until the herds of domestic reindeer can be started, but after that the people will be self-supporting.

In the Arctic and sub-Arctic regions of Lapland and Siberia the domesticated reindeer is food, clothing, house, furniture, implements, and transportation to the people. Its milk and flesh furnish food; its marrow and tongue are considered choice delicacies; its blood mixed with the contents of its stomach is made into a favorite dish called in Siberia "manyalla;" its intestines are cleaned, filled with tallow and eaten as a sausage; its skin is made into clothes, bedding, tent covers, reindeer harness, ropes, cords, and fish lines; the hard skin of the fore-legs makes an excellent covering for snow-shoes.

Its sinews are dried and pounded into a strong and lasting thread; its bones are soaked in seal oil and burned for fuel; its horns are made into various kinds of household implements—into weapons for hunting and war, and in the manufacture of sleds.

Indeed, I know of no other animal that in so many different ways can minister to the comfort and well-being of man in the far northern regions of the earth as the reindeer.

The reindeer form their riches; these their tents,
Their robes, their beds, and all their homely wealth supply;
Their wholesome fare and cheerful cups.

Under favorable circumstances a swift reindeer can traverse 150 miles in a day. A speed of 100 miles per day is easily made. As a beast of burden they can draw a load of 300 pounds. They yield a cupful of milk at a milking; this small quantity, however, is so thick and rich that it needs to be diluted with nearly a quart of water to make it drinkable. It has a strong flavor, like goat's milk, and is more nutritious and nourishing than cow's milk. The Lapps manufacture from it butter and cheese. A dressed reindeer in Siberia weighs from 80 to 100 pounds. The reindeer feed upon the moss and other lichens that abound in the Arctic regions, and the farther north the larger and stronger the reindeer.

A BIG PASTURE OF TUNDRA.

Now, in Central and Arctic Alaska are between 300,000 and 400,000 square miles (an area equal to the New England and Middle States combined, together with Ohio, Indiana, and Illinois) of moss-covered tundra and rolling plains of grass that are specially adapted by nature for the grazing of the reindeer, and are practically useless for any other purpose.

If it is a sound public policy to bore artesian wells, and to build water-storage reservoirs, by which thousands of arid acres can be reclaimed from barrenness and made fruitful, it is equally a sound public policy to stock the plains of Alaska with herds of domesticated reindeer, and cause those vast, dreary, desolate, frozen, and storm-swept regions to minister to the wealth, happiness, comfort, and well-being of man. What stock raising has been and is on the vast plains of Texas, Colorado, Wyoming, and Montana, reindeer raising can be in northern Alaska. In the corresponding regions of Lapland, in Arctic Norway, and in Sweden and Russia are 27,000 people supporting themselves (besides paying a tax to the Government of \$400,000, or \$1 per head for their reindeer) and procuring their food and clothing largely from their 400,000 domesticated reindeer. Also in the corresponding regions of Siberia, with similar climate, soil, and environment (and only 40 miles distant at the straits), are thousands of Chukchees, Koraks, and other tribes fed and clothed by their tens of thousands of domesticated reindeer.

THE SIBERIANS ARE FAT.

During the past summer I visited four settlements of natives on the Siberian coast, the two extremes being 700 miles apart, and saw much of the people, both of the Koraks and Chukchees. I found them a good-sized, robust, fleshy, well-fed, pagan, half-civilized, nomad people, living largely on their herds of reindeer. Families own from one thousand to ten thousand deer. These are divided into herds of from one thousand to one thousand five hundred. One of these latter I visited on the beach near Cape Navarin. In Arctic Siberia the natives with their reindeer have plenty; in Arctic Alaska, without the reindeer, they are starving.

Then instead of feeding and pauperizing them, let us civilize, build up their manhood, and lift them into self-support by helping them to the reindeer. To stock Alaska with reindeer and make millions of acres of moss covered tundra conducive to the wealth of the country would be a great and worthy event under any circumstances.

But just now it is specially important and urgent from the fact stated in the opening of this report, that the destruction of the whale

and walrus has brought large numbers of Esquimaux face to face with starvation, and that something must be done promptly to save them.

The introduction of the reindeer would ultimately afford them a steady and permanent food supply.

AGRICULTURAL EXPERIMENT STATION.

Passing from Northern Alaska, with its adaptation to reindeer raising, we find the whole southern coast, stretching for thousands of miles, to possess a temperate climate. This is due to the "Kuro-siwe" or "Japan Current" of the Pacific Ocean. In this "temperate belt" it is probable that there are areas of greater or less extent that are adapted to agriculture. At least it is known that there are small farms or vegetable gardens on Kodiak and Afognak Islands, on the shores of Cook's Inlet, and in Southeastern Alaska. It is also known that wild berries grow in great profusion and abundance in many sections. But no intelligent and continued experiments have been made to test the agricultural and horticultural capabilities of the country.

FUR TRADERS AND GOLD SEEKERS.

Until a quite recent period (1867) the European population were fur-trading Russians. They were followed by fur-trading Americans, and more recently by the gold seekers. No one expected to remain long in the country, and there has been no incentive to carry forward intelligent experiments in agriculture.

As early as 1885 I called attention to the fact that there was a very wide diversity of views concerning the agricultural and horticultural capabilities of Alaska, and necessarily very great ignorance; that no systematic effort intelligently prosecuted had ever been made to ascertain what could or what could not be raised to advantage; that it was of very great importance, both to the people of Alaska and the country at large, that careful experiments should be made, extending over a term of years, to ascertain the vegetables, grains, grasses, berries, apples, plums, trees, flowers, etc., best adapted to the country; the best methods of cultivating, gathering, and curing the same; the planting and grafting of fruit trees; the development of the wild cranberry, cattle, hog, and poultry raising; butter and cheese making, etc. In 1886 my recommendation was taken up by the United States Commissioner of Agriculture. He said:

The Industrial Training School at Sitka would furnish an admirable basis for a station, where could be conducted careful experiments to ascertain the agricultural products best adapted to the climate and soil of the Territory, and what breeds of cattle and other domestic animals are most suited to its climate and soil.

Such an experiment ought to extend over a series of years.

DOMESTICATED REINDEER.

In view, therefore, of the national importance of introducing the domesticated reindeer of Siberia into Northern Alaska, and testing the agricultural capacity of Southern Alaska, I most earnestly recommend the establishment of an "agricultural school and experiment station" in connection with the system of industrial education in Alaska.

By an act approved July 2, 1862, Congress made provision for schools for the "benefit of agriculture and the mechanic arts." By an act approved March 2, 1887, provision was made for "agricultural experiment

stations" in connection with the agricultural schools. And by the act approved August 30, 1890, certain of the proceeds of the sale of public lands were set aside for the better support of these agricultural schools.

These acts of Congress require the assent of the legislature of the State or Territory in order that their provisions may become available.

But Alaska has no legislature and is governed directly by Congress. On this account, and partly because nineteen-twentieths of the children to be benefited belong to the native races, Congress has committed to the Secretary of the Interior the duty of making "needful and proper provisions for education in Alaska." It is, therefore, eminently proper that he should be authorized to extend to Alaska the benefits of the agricultural acts of 1887 and 1890, and secure the establishment of a school that can introduce reindeer into that region, and teach their management, care, and propagation, and also to conduct a series of experiments to determine the agricultural capabilities of the country.

To reclaim and make valuable vast areas of land otherwise worthless; to introduce large, permanent, and wealth-producing industries where none previously existed; to take a barbarian people on the verge of starvation and lift them up to a comfortable self-support and civilization, is certainly a work of national importance.

It was my good fortune to make my visit to the Esquimaux in the United States revenue steamer *Bear*, commanded by Capt. Michael A. Healy, who has made an annual cruise in those waters for ten years past. Having seen much of the native population and taken a great interest in their welfare, he has probably a better knowledge of their condition and necessities than any other person.

When, therefore, I suggested the feasibility of introducing the domesticated reindeer of Siberia into Alaska in connection with the Government industrial schools he immediately indorsed the proposition and rendered me much assistance in pursuing my inquiries with regard to the subject. He is also ready to coöperate in carrying out any plan that may be devised.

SHELDON JACKSON.

SITKA, ALASKA.

Captain Healy testifies.

Under orders from the Secretary of the Treasury, I have been ten years on the Bering Sea and Arctic Ocean station of the United States Revenue Marine Service.

My duties have brought me very closely in contact with and greatly interested me in the native population.

On account of this interest I have watched with pleasure the coming among them of the missionaries of the several churches and the teachers of the Government schools.

FOOD DISAPPEARING.

I have also seen with apprehension the gradual exhaustion of the native food supply.

From time immemorial they have lived principally on the whale, seal, walrus, salmon, and wild reindeer. But in the persistent hunt of white men for the whale and walrus, the latter has largely disappeared, and the former been driven beyond the reach of the natives. The white men are also erecting canneries on their best fishing streams, and the usual

supply of fish is being cut off; and, with the advent of improved fire-arms, the wild reindeer are migrating farther and farther away.

I have consulted with a few of the leading teachers, missionaries, traders, and whaling captains, and they, without a single exception, agree that the most practical relief is the introduction of domesticated reindeer into that portion of Northern and Arctic Alaska adapted to them.

In Siberia, but a few miles from Alaska, with climate and country of similar conditions, are tens of thousands of tame reindeer supporting thousands of people, and it will be a very easy and comparatively cheap matter to introduce the tame reindeer of Siberia into Alaska and teach the natives the care and management of them.

As in connection with the industrial schools in Dakota, Indian Territory, and elsewhere the Indian boy is taught the raising of stock, so in the industrial schools of Alaska it is proposed to teach the Esquimaux young men the raising of tame reindeer.

SAVE MILLIONS OF DOLLARS.

A few thousand dollars expended now in the establishment of this new industry will save hundreds of thousands hereafter. For if the time comes when the Government will be compelled to feed these Esquimaux it will cost over \$1,000,000.

With an assured support, such as will come from herds of tame reindeer, there is no reason why the present population shall not be increased in numbers and advanced to the position of civilized, wealth-producing American citizens.

M. A. HEALY,
Captain U. S. S. Bear.

The Yukon River explorer testifies.

My experience in Alaska permits me to state on authority, that the next decade will witness the extinction of the American reindeer, or rather caribou. In 1881, when I first visited the district of Norton and Kotzebue Sounds and the lower Yukon, deer were plentiful. This past winter (1889) not a single animal had been seen within a radius of 200 miles. Similar conditions are coexisting from Port Clarence to Point Barrow, and where in former years the hunters had to travel but 50 miles to reach the deer haunts, to day they traverse twice that distance. These contingencies arise from three causes:

1. The indiscriminate slaughter of young and old animals.
2. The use at the present day of improved weapons of the chase in lieu of the primitive bows, arrows, and spears.
3. The conditions of wind prevailing at the seasons when the deer go to and from the coast. It must be distinctly understood that upon a supply of these animals our Alaskan Esquimaux depend for clothing as well as their store of meat should their pelagic sources of provender fail.

BUT LITTLE MONEY NEEDED.

The proposition to introduce deer from the Siberian herds can be effected at a cost of but a few thousand dollars.

The location for the first experimental station should be on Choris Peninsula or the vicinity of Kotzebue Sound. This location has climatic similarities with Siberia. The deer food (moss) supply is abundant and herding easy.

As the results of this initial experiment become manifest, additional locations for herds can be established. Within two seasons the Chukchee herdsmen will be able to instruct the Esquimaux in the style of herding.

I have made inquiries upon the subject and now give you the result. Ten years ago the Russian steamer *Alexander* went to the Kamchatka Peninsula, and officers of the Alaska Commercial Company bought seven male and seven female deer, transporting them to Bering Island (one of the islands leased by the company from Russia). Captains Blair and Greenberg and Superintendent Lubegoil inform me that the herd now numbers one hundred and eighty. From this you can judge the rate of propagation.

The revenue steamer *Bear* can be utilized for transportation, and I know of no man more capable of conducting the experiment than Captain Healy.

I hope that the small sum required will be voted by Congress, as unless something is done for these people their annihilation is only a question of a brief period.

The whalers have so frightened the big fish that the natives are unable to pursue them in their rapid passage, while the extermination of the walrus is almost a fact.

These remarks I present as requested.

HENRY D. WOOLFE,

SAN FRANCISCO.

The Commissioner of Education approves the plan.

If this very desirable legislation is granted, and under its provisions a suitable school is established, it will be a comparatively easy matter to purchase in Siberia a herd of domesticated reindeer, transport them to Alaska, and give instruction in their care and management.

This would be a great step forward in lifting the native races of that boreal region out of barbarism and starting them toward civilization, a step from the grade of wild hunter to the grade of herdsmen who live on domesticated cattle, and besides this furnish an article of exportation and commerce. The native tribes on the Siberian side are thriving with their herds of reindeer.

It seems that all northern Alaska is filled with moss meadows (tundra), which furnish the very food that the reindeer requires.

Once started the business would grow into large proportions, and the most serious problem that threatens Alaska will be solved.

W. T. HARRIS,
Commissioner.

IN THE SENATE OF THE UNITED STATES.

JANUARY 10, 1891.—Presented by Mr. EDMUNDS and ordered to lie on the table and be printed.

MEMORIAL OF THE CITIZENS OF THE DISTRICT OF COLUMBIA
PRAYING THE PASSAGE OF THE BILL TO RESTRICT THE SMOK-
ING OF CIGARETTES, CIGARS, AND THE USE OF TOBACCO BY
MINORS IN THE DISTRICT OF COLUMBIA.

The following twenty-nine States have passed laws forbidding the sale of cigarettes and tobacco to minors under certain ages :

Maine.	South Carolina.	Kansas.
New Hampshire.	Georgia.	Nebraska.
Vermont.	Alabama.	North Dakota.
Massachusetts.	Kentucky.	South Dakota.
Connecticut.	Ohio.	Wyoming.
New York.	Indiana.	Idaho.
New Jersey.	Illinois.	Nevada.
Pennsylvania.	Michigan.	Oregon.
Maryland.	Minnesota.	Washington.
Virginia.	Arkansas.	

New York and Connecticut have in addition made it unlawful for minors under sixteen years of age to smoke or use tobacco in any public place, or resort.

SYNOPSIS OF STATE LAWS PROHIBITING THE SALE OF CIGARETTES
OR TOBACCO TO MINORS UNDER CERTAIN AGES.

Maine: Approved February 28, 1889. Age under sixteen years. Fine not to exceed \$50.

Selling absolutely prohibited, also giving by other than minor's parent or guardian.

New Hampshire: Approved August 5, 1885. Age under sixteen years. Fine \$20 for each violation.

Vermont: Approved November 22, 1888. Age under sixteen years. Fine not to exceed \$20.

Giving absolutely prohibited, also selling except upon the written order of the minor's parent or guardian.

Massachusetts: Approved March 17, 1886. Age under sixteen years. Fine not exceeding \$50.

This act makes it unlawful for any person or persons to persuade, advise, counsel, or compel any child under said age to smoke or chew tobacco.

Connecticut: Approved April 3, 1889. Age under sixteen years. Fine not more than \$50.

There is also the following additional provision:

No person under sixteen years of age shall have, smoke, or in any way use in any public street, place, or resort, any tobacco in any form whatsoever.

Any person violating the provisions of this section shall be fined not more than \$7 for each offense.

New York: Approved April 22, 1889. Age under sixteen years.

A person who sells, pays for, or furnishes any cigar, cigarette, or tobacco in any of its forms to any child actually or apparently under the age of sixteen years is guilty of a misdemeanor.

The following supplemental act went into effect September 1, 1890:

No child actually or apparently under sixteen years of age shall smoke or in any way use any cigar, cigarette, or tobacco in any form whatsoever in any public street, place, or resort.

A violation of such provision shall be a misdemeanor and shall be punished by a fine not exceeding \$10 nor less than \$2 for each offense.

New Jersey: Approved March 22, 1883. Age under sixteen years. Fine \$20.

Pennsylvania: Approved May 7, 1889. Age under sixteen years. Fine not more than \$300.

This law relates simply to cigarettes.

Maryland: Approved April 7, 1886. Age under fourteen years. Fine not less than \$10 nor more than \$100, or, in default, imprisonment not less than five nor more than thirty days.

Exception made where there is a written order of parent or guardian, or when such minor is acting solely as the agent of his employers.

Virginia: Approved February 28, 1890. Age under sixteen years. Fine not less than \$10 nor more than \$100.

South Carolina: Approved 1889. Age under eighteen years. Fine not exceeding \$100 nor less than \$25. Imprisonment not less than two months nor more than one year, or both, in the discretion of the court.

Georgia: Approved September 19, 1889. Amended November 4, 1889. Age under twenty-one years.

This act includes cigarette paper. Violation of this law is a misdemeanor, and punishable as prescribed in section 4310 of the Code of Georgia, 1882.

Alabama: Approved December 11, 1890. Age under eighteen years. Fine not less than \$10 nor more than \$50, or imprisonment at hard labor not more than thirty days.

Kentucky: Approved February 14, 1890. Age under eighteen years. Fine not less than \$5 nor more than \$25, or imprisonment not exceeding thirty days, or both fine and imprisonment.

Ohio: Passed April 10, 1888. Age under fifteen years. Fine not less than \$5 nor more than \$25, or imprisonment not more than thirty days, or both fine and imprisonment.

Indiana: Approved March 9, 1889. Age under sixteen years. Fine not less than \$1 nor more than \$10.

This act makes it unlawful for any person or persons to persuade, advise, counsel, or compel any child under said age to smoke or chew tobacco.

Illinois: Approved June 15, 1887. Age under sixteen years. Fine \$20.

Exception where there is written order of parent or guardian.

Michigan: Approved May 8, 1889. Age under seventeen years. Fine not less than \$5 nor more than \$50, or imprisonment not less than

ten days nor more than thirty days, or both fine and imprisonment, in the discretion of the court.

Exception made where there is a written order from parent or guardian.

Minnesota: Approved April 2, 1889. Age under sixteen years. Fine \$50, or imprisonment not more than thirty days, or both fine and imprisonment.

Arkansas: Approved February 22, 1889. Age under fifteen years. Fine not less than \$10 nor more than \$50.

Kansas: Passed 1889. Age under sixteen years. Fine not less than \$5 nor more than \$25.

This act also prohibits the selling, giving, or furnishing of opium or other narcotics, except upon the prescription of a physician.

Nebraska: Approved February 24, 1885. Age under fifteen years. Fine \$25.

North Dakota: Approved February 13, 1890. Age under sixteen years. Imprisonment not more than thirty days, or a fine of not more than \$50, or both imprisonment and fine.

Exception made where there is a written order of parent or guardian.

South Dakota: Approved February 26, 1890. Age under sixteen years. Fine not to exceed \$50, or imprisonment not to exceed ten days, or both fine and imprisonment.

Wyoming: Approved February 24, 1890. Age under fifteen years. Fine not to exceed \$10 and the costs of the prosecution.

This law includes cigarette paper.

Idaho: Approved February 7, 1889. Age under twenty-one years. Fine \$100 and costs.

Nevada: Approved March 7, 1889. Age under eighteen years. Fine not exceeding \$500 nor less than \$100, or imprisonment not exceeding six months nor less than fifty days.

Exception made where there is a written order of parent or guardian.

Oregon: Approved February 18, 1889. Age under eighteen years. Fine not less than \$20 nor more than \$50.

Exception is made where there is a written order of parent or guardian.

Washington: Approved November 26, 1884. Age under sixteen years. Fine not less than \$10 nor more than \$50.

WASHINGTON, D. C., January 5, 1891.

DEAR SIR: I have been requested to state briefly some of the bad effects of cigarette smoking on the young.

1. The tobacco habit retards the growth and development of the young by its influence on the heart and nervous system.

2. Cigarettes are almost always contaminated (fortified) by the addition of some form of opium, and thus the opium habit is apt to follow the tobacco habit.

3. The excessive use of tobacco creates a craving for alcoholic stimulants—and intemperance frequently results.

4. The paper in which cigarettes are wrapped often contains arsenic.

5. A habit of this sort in the young engrosses the thoughts and turns away their attention from proper channels.

6. And in conclusion I can not express too strongly, from a medical point of view, my opinion of the grave deleterious effects of the use of tobacco—especially by cigarette smoking—by young persons.

Yours, respectfully,

D. WEBSTER PRENTISS, M. D.,
Professor Materia Medica and Therapeutics,
Columbian University, District of Columbia, and
President of the Medical Society of the District of Columbia.

5 JANUARY, '91.

Dr. Prentiss has expressed my views exactly and I hope the bill may become a law and be enforced.

JOS. TABER JOHNSON, M. D.,
926 Farragut Square.

Hon. JAMES McMILLAN,
U. S. Senate.

WASHINGTON, D. C., December 20, 1890.

DEAR MADAM: Your letter of the 19th instant was duly received, and I am very willing to add my name to the "bill to prohibit the selling, giving, or furnishing cigarettes or tobacco in any form to minors under sixteen years of age in the District of Columbia." Many cases have fallen under my notice of minors suffering from nervous diseases and general impairment of the powers of mind and body from the use of tobacco, and more especially from cigarette smoking. I look upon this habit as almost equal to that of the use of alcohol, as the latter often follows as a necessary consequence. Wishing you success in the good work that you have undertaken, believe me,

Very respectfully yours,

D. R. HAGNER, M. D.

Mrs. EMMA F. SHELTON.

To the Senate and House of Representatives in Congress assembled:

Whereas we believe the use of tobacco to be one of the chief sources of demoralization among the youth of the District of Columbia; and

Whereas in our thirty years' experience in teaching more than fifty thousand young people we have found the effects of this narcotic to be precocious development of evil passions, premature age, shattered nerves, mental weakness, stunted growth, and general physical and moral degeneracy, and therefore now decline to receive into our institution any who use this noxious weed; and

Whereas we believe the mental and moral welfare of the young people of this community require legal protection from the ever vigilant emissaries of this form of vice:

Therefore we, the undersigned citizens of the United States and residents of the District of Columbia, do respectfully urge upon your honorable body the immediate consideration of Senate bill No. 4560.

HENRY C. SPENCER,
Principal Spencerian Business College.
SARA A. SPENCER,
Vice Principal.

FREEDMEN'S HOSPITAL,
Washington, D. C., December 30, 1890.

DEAR MADAM: Your letter requesting me to give my views from a medical standpoint why Congress should enact a law prohibiting the sale of cigarettes to minors was duly received.

When I was trustee of public schools I succeeded in having a resolution adopted urging the Commissioners of the District to draw a bill to be presented to Congress forbidding all dealers in tobacco to sell to minors. For some reason the Commissioners took no notice of the resolution. My reasons for having the board of school trustees take action was, I observed the pernicious habit of using tobacco in the form of cigarette smoking among boys was growing. I felt we owed it to the lads and to the community to make an effort to stop a practice that was attended with so much evil consequence to both.

Tobacco will produce a variety of disorders of a permanent character in the various organs of the body. Smoking will cause blood changes, giving it fluidity; it will cause debility of the stomach, debility and irregularity of the heart; it produces bronchial irritation, the base of the tongue is often affected, the vocal cords become impaired; the effect upon the eyes is often serious—the pupils become dilated, and the optic nerve partially or wholly paralyzed. Its deleterious effect upon the spinal cord at times is marked; the brain is frequently poorly nourished. This is largely the sequel to the debility tobacco produces of the stomach, and to the irregularity of the heart; this is why smokers have fainting spells and vertigo. Tobacco prevents in a great measure assimilation of food; in fact smokers can go for hours without eating.

To allow our youth to engage unrestrictedly in a practice that will produce the

conditions I have mentioned (and I have not mentioned half) is to permit that which will produce a race of imbeciles.

Louis Napoleon saw the effect smoking was having upon the lads of France, and issued an edict forbidding the sale of tobacco to minors.

Trusting your efforts to have a law regulating the sales of it in this District will be successful,

I remain yours truly,

Mrs. EMMA F. SHELTON.

C. B. PURVIS,

THE CATHOLIC UNIVERSITY OF AMERICA,
Washington, D. C., January 5, 1891.

Since the public seem convinced that the use of tobacco by minors is a pernicious evil, and that the practice can be reached and stopped only by the aid of legislation, I unite with the large number of physicians, and others competent to judge in the matter, in petitioning for the passage of the bill to that effect now before Congress.

JOHN J. KEANE.

HOWARD UNIVERSITY,
Washington, D. C., July 6, 1891.

This University has always occupied a pronounced position against the use of tobacco among its students, and I believe I voice the sentiment of all its faculties as well as its board of trustees in giving my hearty indorsement to the bill prohibiting the sale of tobacco to minors under sixteen, and its use by them.

J. E. RANKIN,
President.

S. 4560.—A bill to prohibit the sale of tobacco to, or its use by, minors under sixteen years of age in the District of Columbia.]

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That hereafter no person in the District of Columbia shall sell, give, or furnish any cigar, cigarette, or tobacco in any of its forms to any minor under sixteen years of age; and for each and every violation of this section the offender shall, on conviction, be fined not less than two dollars nor more than ten dollars, or be imprisoned for not less than five days nor more than twenty days.

SEC. 2. That no minor under sixteen years of age shall smoke or in any way use any cigar, cigarette, or tobacco in any form in any street, avenue, alley, or other public place or resort within the District of Columbia; and each and every violation of this section shall be punishable by a fine of not less than two dollars nor more than five dollars.

We most respectfully and urgently petition the Congress to pass at once the above bill, so necessary to the protection of the health and morals of the young of the District of Columbia.

Tennis S. Hamlin, G. B. Patch, B. F. Bittinger, W. A. Bartlett, Chas. B. Ramsdell, M. N. Cornelius, Joseph T. Kelly, John Chester, J. L. French, T. S. Wynkoop, James E. Fitch, Robert C. Fox, C. J. Bell, William Fitch, Wm. Ballantyne, W. W. Flemming, S. V. Carter, Edmond R. Colhoun, Alfred R. Quaiffe.

ST. MATTHEW'S CHURCH,
Washington, D. C., January 6, 1891.

Being thoroughly convinced that the habit of smoking is pernicious, particularly in the case of minors, I would be glad to see suitable legislation enacted that would help sensible parents in their efforts to preserve their sons from a practice which is noxious to mind and body.

P. L. CHAPPELLE, D. D.,
Rector St. Matthews.

GEORGETOWN COLLEGE,
West Washington, D. C., January 6, 1891.

DEAR MADAM: I fully approve of the purpose and method of the bill introduced into the Senate by Senator Edmunds, to prohibit the sale of tobacco to children under sixteen years of age and its use by such minors in public places. In the form of cigarettes, especially, tobacco is unquestionably an active poison, and any judicious plan for regulating or prohibiting its use by those whose constitution is not yet sufficiently strong to resist its deleterious effects will always have my hearty sympathy.

Very sincerely yours,

J. HAVENS RICHARDS, S. J.,
President.

Mrs. CHARLES W. SHELTON.

O

IN THE SENATE OF THE UNITED STATES.

JANUARY 10, 1891.—Presented, referred to the Committee on Privileges and Elections, and ordered to be printed.

COMMUNICATION FROM MESSRS. WM. H. CLAGETT AND J. R. DE LAMAR, TRANSMITTING A PROTEST SIGNED BY TWENTY-THREE MEMBERS OF THE LEGISLATURE OF IDAHO, AGAINST ALLOWING HON. FRED T. DUBOIS TO TAKE HIS SEAT IN THE SENATE.

To the honorable Senate of the United States:

We have the honor to transmit herewith a protest, signed by twenty-three members of the legislature of the State of Idaho, against allowing the Hon. Fred T. Dubois to take his seat in the Senate as a Senator from the State of Idaho, after March 4, 1891, on the ground that said Dubois was not elected to that high office. A brief statement of the facts and questions arising thereon, as shown by the duly certified copies of the journals of the two houses of the legislature, transmitted herewith, are occurrences of such a public nature that they have not up to the present time been disputed, and can not successfully be disputed, is as follows, viz:

On Monday, December 8, 1890, the legislature of the State of Idaho met pursuant to the proclamation of the governor, issued as required by section 14, article 21 of the constitution of the State.

On the first day of the session the house of representatives elected its speaker and principal officers, and on Tuesday, December 9, 1890, it completed the election of its officers, and thereafter and on that day *all* of its officers were sworn and entered upon their respective duties for the first time, and thereupon the house duly notified the senate of its organization.

On Monday, December 8, 1890, the senate took no steps toward electing its officers, but elected them all on December 9, 1890, and thereupon notified the house of representatives of its organization.

Thus it will be seen that the legislature was organized on Tuesday, the 9th of December, 1890.

On December 13 the following joint resolution passed the senate, viz:

Resolved by the senate, the house concurring, that the senate and house of representatives proceed to elect, as provided by law, United States Senators at the hour of 12 o'clock m., on Tuesday, the 16th day of December.

Which resolution was concurred in by the House of Representatives before the hour of 12 o'clock m., on Tuesday, December 16, 1890.

The law which *provided* for the election contemplated by the above resolution is found in section 14, article 21, of the State constitution, which directs the legislature "within *ten* days after its organization to elect, as *provided by law*, two Senators of the United States," and in section 20 of the act of Congress admitting Idaho into the Union, which provides that the "legislature of the State may elect two Senators of the United States as is provided by the constitution of the State."

Thus the legislature was charged by law with the duty of electing two United States Senators within *ten* days after its organization and to fulfill this duty the joint and concurrent resolution aforesaid required the election to be held within the *ten* days, viz, on Tuesday, December 16, 1890.

On Tuesday, December 16, 1890, the two houses, acting separately, voted for a United States Senator, without a choice being had.

On December 17, 1890, the two houses met in joint assembly, under the joint and concurrent resolution aforesaid, and took two ballots for a United States Senator, without a choice being had.

On the night of the 17th of December, 1890, a combination was formed by three of the candidates before the legislature, and by many of the supporters of such candidates *in* the legislature, by which it was agreed by such candidates and their respective supporters that three ballots should be taken the next day in the joint assembly and one of the three candidates in the combination elected on each ballot, the third election being to fill the vacancy which it was *assumed* would exist after March 4, 1891. Under this agreement, many members of the legislature, to secure the election of their first choice among the three candidates aforesaid, agreed to vote for one or more of the three to whose election they were violently opposed, in consideration of other members voting for their respective first-choice candidates, and thereby a majority of all the members of the legislature was obtained to carry out in the joint assembly the programme which had been arranged.

That this agreement among the members was a criminal act, section 6413 of the Revised Statutes of Idaho provides that—

Every member of either of the houses composing the legislature * * * who gives, or offers, or promises to give, any official vote in consideration that another member of the legislature shall give any such vote, either upon the same or another question, is guilty of felony.

After laying the foundation of the combination in an act declared a felony by the law of the State, it was necessary to resort to other illegal and revolutionary acts to make it successful, and accordingly when the joint assembly met again, on December 18, 1890, Senator Gunn offered therein the following resolution:

Resolved by the joint assembly of the senate and house of representatives of the legislature of the State of Idaho, That we proceed to elect two United States Senators to fill existing vacancies, and that after such election we immediately proceed to elect one United States Senator, to fill vacancy occurring March the 4th, 1891.

This resolution and the subsequent action taken thereunder were resisted by the members opposed to the illegal combination, but in spite of their efforts to the contrary the programme was carried out by the election of Hons. William J. McConnell and George L. Shoup to the Senate, and *immediately* thereafter, against the protest of members that an election at that time to fill an assumed vacancy on March 4, 1891, was illegal, the Hon. Fred T. Dubois was declared elected to fill such assumed vacancy.

Many things contribute to shield the members who entered into this combination from severe moral censure. Nearly all of them were inexperienced as legislators, and there are but two lawyers in the entire body, one of whom was relied upon by the members entering the combination to give them correct legal advice, and he is now a prominent candidate for appointment as United States district judge for Idaho.

So far as the election of Hon. Fred T. Dubois is concerned, it is submitted that in addition to the causes heretofore mentioned his alleged election is void for the reasons following, viz:

(1) Because it was unlawful for the legislature to elect any one to fill the vacancy assumed to exist after March 4, 1891, until after the two Senators elected as provided by the State constitution and the admission act had proceeded to Washington and drawn for terms, as the legislature could not know to a legal certainty until then that there would be such vacancy.

(2) That the legislature having met in joint assembly to elect two Senators to fill existing vacancies, it was a usurpation of power for the joint assembly (which was a special tribunal created by the joint and concurrent resolution of the two houses acting separately for a special purpose) to organize itself as a political convention for all purposes it might wish to accomplish, and thereby abolish the legislative functions and powers of the two houses to act separately as the law directs.

(3) That to carry out the programme secretly agreed upon it was necessary to elect Mr. Dubois *immediately* after the two Senators were elected, and that this haste made it impossible to discharge the important duty of electing a United States Senator with that deliberation which the United States Revised Statutes contemplate.

Fourth. That to carry out the programme it was necessary to dispense with the taking of a vote, to fill this *assumed* vacancy, by the two houses acting separately, as required by the United States Revised Statutes, and so this vote was dispensed with.

Fifth. That to carry out the programme it was necessary to vote to fill this assumed vacancy on the first instead of the second Tuesday after the organization of the legislature, and therefore the *time* provided by law for the election of a United States Senator was set aside.

Sixth. We further urge that it would be a grave misfortune to the State if one not elected should be permitted to take his seat in the Senate, and a misfortune almost as grave if a serious doubt should exist as to the title of one of Idaho's Senators to his seat.

Seventh. That the welfare of the State requires that the advice of the Senate should be taken as to the election of Mr. Dubois before the adjournment of the present session of the legislature, so that in case he shall be adjudged not entitled to his seat the State may be saved the expense of an extra session of the legislature to fill the vacancy (if there shall be a vacancy) after March 4, 1891.

All of which is respectfully submitted.

WM. H. CLAGETT.
J. R. DE LAMAR.

PROTEST AGAINST THE ELECTION OF THE HON. FRED T. DUBOIS TO THE SENATE OF THE UNITED STATES FOR THE STATE OF IDAHO.

We, the undersigned, members of the first session of the legislature of the State of Idaho, respectfully protest against the admission of the Hon. Fred T. Dubois to a seat in the Senate of the United States as Senator from the State of Idaho for the term beginning on the 4th day of March, 1891, on the ground that he has not been legally elected such Senator, and in support thereof we respectfully show :

(1) That the first session of the legislature of the State of Idaho was convened at the capitol of the State at 12 o'clock m. on Monday, the 8th day of December, 1890, by proclamation of the governor of the State.

(2) That the senate did not organize on Monday, December 8, 1890, and was not organized until Thursday, the 9th day of December, 1890, on which day for the first time it organized by the election of all its officers except the presiding officer who is designated by the constitution, and on that day sent notification of the fact of its organization to the other branch of the legislature and to the executive.

(3) That thereafter, on the 13th day of December, 1890, a concurrent resolution was passed by the senate to the effect that the respective houses of the legislature would proceed on Tuesday, the 16th day of December, to elect United States Senators, which resolution was concurred in by the house of representatives.

(4) That on Tuesday, December 16, being the first Tuesday after the organization of the legislature as above stated, each house of the legislature voted for the election of one United States Senator and adjourned.

On the next day, Wednesday, December 17, 1890, the two houses met in joint assembly, and the journals of each house being read, it was shown that no person had received a majority of the votes cast in either house, and the joint assembly then proceeded to vote for one Senator, and no person receiving a majority of the votes cast, the joint assembly adjourned to meet the next day.

(5) That the two houses of the legislature met for the second time in joint assembly on Thursday, the 18th day of December, 1890, and by resolution proceeded to elect two Senators to fill the existing vacancies for the State of Idaho, after which the joint assembly immediately proceeded, against the protest of members present, who objected thereto because the joint assembly had no legal right so to do until the second Tuesday after organization of the legislature (to elect a Senator for the term commencing on the 4th day of March, 1890), and the Hon. Fred T. Dubois was declared elected.

And your protestants respectfully show, that said pretended election was had before the second Tuesday after the organization of the senate, to wit, the 23d day of December, 1890.

That neither house of the legislature had voted for or named any person as Senator for said term, as required by Chapter I of Title 2 of the Revised Statutes of the United States, and the election of a Senator for said term, beginning March 4, 1891, had never been agreed to or considered favorably by either house of the legislature, but was first resolved upon in the joint assembly convened for the election of Senators to fill the existing vacancies, and was proceeded with against the protest and objection of members of the joint assembly, on the ground that such election at that time was not authorized by law.

Your protestants therefore pray that the Hon. Fred T. Dubois be not admitted to a seat in the Senate of the United States as a Senator for the State of Idaho.

JOHN S. GRAY,
President pro tempore of the Senate.

MONDAY—FIRST DAY.

HOUSE OF REPRESENTATIVES,
Boise City, Idaho, Dec. 8, 1890.

In pursuance of the proclamation of the governor of Idaho, the house was called to order by Hon. H. J. Burkhart, speaker of the house of representatives of Fifteenth legislative assembly of the Territory of Idaho at the hour of 12 o'clock m.

Chas. H. Reed, chief clerk of the house of representatives of the Fifteenth session of the legislative assembly of the Territory of Idaho, acting the chief clerk of the house, then read the following proclamation:

STATE OF IDAHO.

PROCLAMATION CONVENING THE STATE LEGISLATURE.

Whereas Idaho was admitted into the Union of States on the 3d day of July, 1890, under a constitution previously prepared and adopted by a constitutional convention of the citizens of the Territory of Idaho, and ratified at an election held on November 5th, 1889; and

Whereas it is provided in the said constitution of the state of Idaho "that the governor of the State, immediately upon his qualifying and entering upon the duties of his office, shall issue his proclamation convening the legislature of the state on a day to be named in said proclamation:"

Now, therefore, in pursuance of the foregoing provisions and by authority vested in me as governor under the constitution of the State, I do hereby issue this my proclamation, designating Monday, the 8th day of December, 1890, as the day upon

which the legislature of the State of Idaho shall convene, and the members-elect to said legislature are hereby requested to assemble at Boise City, the capital of the State, at 12 o'clock meridian on the day above named (December 8th, 1890), and proceed to organize the legislature, as provided by the constitution and laws now in force.

In testimony whereof I have hereunto set my hand and caused the great seal of the State to be affixed. Done at the city of Boise, the capital of Idaho, this 3d day of November, in the year of our Lord one thousand eight hundred and ninety, and of the Independence of the United States of America the one hundred and fifteenth.

[SEAL.]

GEO. L. SHOUP,
Governor of Idaho.

By the Governor:

E. J. CURTIS,
Secretary of State.

The following certificate of the Secretary of State was then read:

DEPARTMENT OF STATE.

Secretary's Office, Idaho, Boise City, Dec. 8th, 1890.

The board of canvassers created by sec. 10, article 21, Constitution of the State of Idaho, have declared the following named gentlemen to have been elected members of the house of representatives of the first session of the legislature of the State of Idaho.

Ada County: W. H. Smith, Frank Steunenberg, J. M. Ballentine.

Alturas.—Lyttleton Price, George E. Mills.

Bingham.—B. J. Briggs, E. S. Merrell, R. A. Caldwell.

Bear Lake.—James Lyons.

Boise.—B. H. Smith, E. W. Jones.

Cassia.—F. C. Ramsey.

Custer.—George W. Emery, S. A. Swanger.

Elmore.—Martin King.

Idaho.—Frank A. Fenn.

Latah.—K. O. Skattaboe, J. C. Martin.

Kootenai.—U. M. Casey.

Lemhi.—Thos. Pyeatt, Eli Snyder.

Logan.—Henry Armstrong, Jno. G. Dryden.

Nez Perces.—T. S. Sperry.

Owyhee.—Joseph Hawkins.

Oneida.—Peter Frederickson.

Shoshone.—J. F. Cameron, C. D. Porter, A. L. Scofield, Jno. Hanley.

Washington.—C. M. Hixon, Chas. Irwin.

Ada and Elmore.—D. B. Ethell.

Alturas, Logan, and Bingham.—D. R. Munroe.

Idaho and Nez Perces.—J. D. Goodnight.

Latah and Kootenai.—A. J. Green.

I, A. J. Pinkham, secretary of the State of Idaho, do hereby certify that the foregoing is a full, true, and correct list of the members of the house of representatives, elected to represent the several counties in the State in the first session of the legislature of the State of Idaho, as the same have been returned by the several county canvassing boards, and now appear on file in the secretary's office.

In testimony whereof, I have hereunto set my hand and affixed the great seal of the State. Done at Boise City, the capital of Idaho, this 8th day of December, A. D. 1890.

[SEAL.]

A. J. PINKHAM,
Secretary of State.

The roll of members, as they appear upon the certificate of the secretary of State, was called, all being present.

The oath of office was then administered to the members of the house by Hon. John T. Morgan, associate justice of the supreme court of Idaho.

Prayer by Rev. L. W. Gowen.

The election of a speaker being declared in order, Mr. Emery, of Custer County, placed in nomination Mr. Fenn, of Idaho County.

Mr. Jones, of Boise County, placed in nomination Mr. Ballentine, of Ada County

A ballot was then taken, which resulted as follows :

Mr. Fenn	29
Mr. Ballentine	5
Mr. Emery	1
Mr. Stennenberg	1

The chair appointed Messrs. Price, Armstrong, and Cameron a committee to escort Mr. Fenn to the chair.

The committee presented Mr. Fenn, who was introduced to the house by Mr. Burkhart as the speaker of the house.

The oath of office was then administered to the speaker by Judge Morgan.

The speaker declared the next business in order to be the election of a chief clerk

Mr. Pyeatt of Lemhi County, nominated Chas. H. Reed, of Ada County, and Mr. Hawkins of Owyhee, nominated E. B. Lemon, of Alturas County.

A ballot was then taken which resulted as follows:

Mr. Reed	18
Mr. Lemon	11
Mr. Wickersham	5
Mr. Gray	1

Mr. Reed was declared duly elected chief clerk of the house for the ensuing session.

On motion of Mr. Armstrong the house took a recess for an hour.

AFTERNOON SESSION.

House called to order at 2 o'clock p. m.

Mr. Speaker in the chair.

Absent: Messrs. Jones, Lyon, Martin, Porter, and W. H. Smith.

On motion of Mr. Emery it was ordered that the election of all the attachés of the house be made by ballot.

The speaker appointed Messrs. King of Elmore County, and Green, of Latah and Kootenai County, as tellers.

The election of a sergeant-at-arms being declared in order, Mr. Briggs placed in nomination P. L. Hughes, of Bingham County, and Mr. Green nominated John Hunter.

A ballot was taken which resulted as follows:

Hughes	17
Hunter	19
Total	36

and Mr. Hunter was declared elected.

On motion of Mr. Monroe the house proceeded to the election of an assistant chief clerk, and nominations were made as follows :

Frank Riblett, by Mr. Ramsey.

Carrie Sweet, by Mr. Monroe.

Anna Black, by Mr. W. H. Smith.

Mr. Smith withdrew the name of Anna Black and a ballot was taken, which resulted as follows:

Mr. Ribbett	12
Miss Sweet	17
Miss Black	6
Total	35

There being no choice, another ballot was taken with the following result :

Mr. Ribbett.....	9
Miss Sweet.....	26
Total	35

and Miss Sweet was declared elected.

The election of a doorkeeper was then taken up and the following nominations made :

J. W. Jackson, by Mr. Lyon.

J. H. Wallace, by Mr. W. H. Smith.

T. T. Huntington, by Mr. Mills.

A ballot was then taken, which resulted as follows :

Mr. Jackson	14
Mr. Wallace.....	7
Mr. Huntington.....	10
Mr. Hunter.....	3
Mr. Larabee	1
Blank	1
Total.....	36

There being no choice, a second ballot was taken, which resulted as follows :

Jackson	20
Wallace	6
Huntington.....	9
Larabee	1
Total.....	36

and Mr. Jackson was declared duly elected.

On motion of Mr. Hawkins the house adjourned until 10 a. m., tomorrow, Dec. 9, 1890.

F. A. FENN,
Speaker.

Attest:

CHAS. H. REED,
Chief Clerk.

(NOTE.—The proceedings relating to the election of subofficers omitted.)

TUESDAY—SECOND DAY.

HOUSE OF REPRESENTATIVES,
Boise City, Idaho, Dec. 9th, 1890.

House met pursuant to adjournment.

Mr. Speaker in the chair.

Roll called.

Absent: Messrs. Ballentine, Caldwell, Ethel, Lyon, Pyeatt, Ramsey.

Prayer by chaplain.

Journal of yesterday read, corrected, and approved.

There being no objection the speaker declared the election of officers now in order.

Mr. Armstrong then nominated Rev. J. H. Barton for chaplain. Mr. Steunenberg moved that the election be made by acclamation.

Motion prevailed, and Rev. J. H. Barton was declared duly elected.

* * * * *

On motion of Mr. Steunenberg the attachés elect of the house, Miss Hunt excepted, were brought forward and the oath of office administered.

On motion of Mr. Jones, the chief clerk was directed to notify the council that the house was permanently organized and ready to proceed to the transaction of legislative business.

* * * * *

MESSAGE FROM THE SENATE.

[First session.]

STATE OF IDAHO, SENATE CHAMBER,
Boise City, Dec. 9, 1890.

Mr. SPEAKER: I am instructed to inform your honorable body that the Senate has permanently organized by the election of the following officers and attaches:

Secretary of the senate, M. C. Athey.
Ass't secretary, Robert Larimer.
Sergeant-at-arms, G. W. Hunter.
Doorkeeper, E. F. Calahan.
Engrossing clerk, S. B. Smith.
Ass't engrossing clerk, Miss Permeal French.
Enrolling clerk, Mark Leonard.
Ass't enrolling clerk, Miss Maggie Revey.
Pages, Sydney Fuld and W. W. Gasser.
Janitor, James Lawson.
Chaplain, Rev. L. W. Gowen.
And has proceeded to the transaction of legislative business.
Respectfully,

M. C. ATHEY,
Secretary.

Mr. Mills offered the following resolution, which was adopted:

Resolved, That a committee of three (3) members be appointed by the speaker, to join a like committee which may be appointed by the Senate, to wait upon his excellency the governor and inform him that the legislature is organized and now in session and ready to receive any communications he may be pleased to transmit.

The speaker appointed as such committee Messrs. Monroe, Porter, and Ballentine.

MESSAGE FROM THE SENATE.

SENATE CHAMBER,
Boise City, Dec. 9th, 1890.

By the senate.

Mr. SPEAKER: The senate has appointed Messrs. Wells, Finck, and Dempsay a committee to join the committee you have appointed to inform his excellency the governor of the organization of the first legislature of the State of Idaho, and that we are ready to receive any communication he may desire to make.

By order.

M. C. ATHEY,
Secretary.

* * * * *

On motion of Mr. Porter the house adjourned until 11 a. m. to-morrow.

F. A. FENN,
Speaker.

Attest:

CHAS. H. REED,
Chief Clerk.

FRIDAY, FIFTH DAY.

HOUSE OF REPRESENTATIVES,
Boise City, Idaho, Dec. 12th, 1890.

House called to order at 10 a. m.

Mr. Speaker in the chair.

Prayer by the chaplain.

Roll called.

Absent: Messrs. Briggs, Casey, Ethel, King, Lyons, Mills, Porter, Price, Ramsey, B. H. Smith, and Steunenberg.

Journal of yesterday read and approved.

MOTIONS AND RESOLUTIONS.

Mr. Porter offered the following resolution :

Resolved, That the house of representatives do now proceed to vote for a United States Senator for the State of Idaho, who is to hold the full term of six years, beginning with the Fifty-second Congress.

Mr. Hawkins offered the following substitute for Mr. Porter's resolution:

I respectfully move as an amendment that this house proceed on Tuesday next, the second Tuesday after the call of this legislature, to elect two Senators to represent this State in the Senate of the United States.

Mr. Price offered the following substitute for both resolution and substitute, which was declared out of order by the speaker :

Resolved, That the house of representatives, the senate concurring, proceed to-day to the election of two United States Senators for the State of Idaho, as provided in the constitution and the act of Congress admitting the State of Idaho into the Union.

Mr. Green moved to amend the substitute offered by Mr. Hawkins, by inserting after the word "proceed" in the second line the words "at 12 o'clock m." which amendment was accepted.

The question being upon the adoption of the substitute as amended, the ayes and nays were taken with the following result:

Ayes: Ballentine, Green, Hawkins, Irvine, Jones, Martin, Scattaboe, B. H. Smith, Sperry, Steunenberg. Total, 10.

Nays: Armstrong, Briggs, Caldwell, Cameron, Casey, Dryden, Emery, Ethel, Fredrickson, Goodnight, Hauley, Hixon, King, Lyons, Merrell, Mills, Monroe, Porter, Price, Pyeatt, Ramsey, Scofield, W. H. Smith, Suydam, Swauger, Mr. Speaker. Total, 26.

And so the substitute was rejected.

On the motion of Mr. Hanley the House took a recess until 2.30 p. m.

AFTERNOON SESSION.

House called to order at 2.30 p. m.

Mr. Speaker in the chair.

Roll called. All present.

There being no objection, Mr. Porter withdrew his resolution offered this morning.

* * * * *

On motion of Mr. Price the house then adjourned.

Attest:

CHAS. H. REED,
Chief Clerk.

F. A. FENN,
Speaker.

SATURDAY, SIXTH DAY.

HOUSE OF REPRESENTATIVES,
Boise City, Idaho, Dec. 13, 1890.

House called to order at 10 o'clock a. m.

Mr. Speaker in the chair.

Prayer by the chaplain.

Roll called.

Absent: Messrs. Briggs, Caldwell, Hanley, Jones, and Mills.

Journal of yesterday read and approved.

* * * * *

MESSAGE FROM THE SENATE.

OFFICE OF SECRETARY OF THE SENATE,
Boise City, Idaho, Dec. 13th, 1890.

Mr. SPEAKER: I am instructed to inform your honorable body that the senate has had under consideration and passed senate concurrent resolution No. 3, requiring the senate and house of representatives to proceed to elect United States Senators, as provided by law, at 12 o'clock m., on Tuesday, Dec. 16th, 1890.

And you are respectfully requested to concur.

Respectfully,

M. C. ATHEY,
Secretary.

* * * * *

MONDAY, EIGHTH DAY.

HOUSE OF REPRESENTATIVES,
Boise City, Idaho, December 15, 1890.

House called to order at 10 a. m.

Mr. Speaker in the chair.

Prayer by the chaplain.

Roll called.

Absent: Mr. Mills.

Journal of Saturday read and approved.

* * * * *

Senate concurrent resolution No. 3, by Gunn, requiring the senate and house of representatives to proceed to elect United States Senators, as provided by law, on Tuesday, December 16, 1890, at 12 o'clock m., was read first time.

* * * * *

TUESDAY, NINTH DAY.

HOUSE OF REPRESENTATIVES,
Boise City, Idaho, Dec. 16, 1890.

House called to order at 11.30 a. m.

Mr. Speaker in the chair.

Prayer by the chaplain.

Roll called.

Absent: Mr. Mills.

The speaker announced that Mr. Mills had been called home on account of sickness, and, there being no objection, he was granted indefinite leave of absence.

Journal of yesterday read and approved.

* * * * *

S. C. R. No. 3, requiring the senate and house to proceed to elect U. S. Senators, as provided by law, was read second time. Mr. Steunenberg moved that the rules be suspended and the resolution be read a third time and placed on its final passage.

Question being on suspension of rules, the ayes and nays were taken, with the following result:

Ayes: Armstrong, Ballentine, Briggs, Caldwell, Cameron, Casey, Dryden, Emery, Ethel, Frederickson, Goodnight, Green, Hanley, Hawkins, Hixon, Irvine, Jones, King, Lyons, Martin, Merrell, Monroe, Porter, Price, Pyeatt, Ramsey, Scattaboe, Scofield, Smith, W. H., Smith, B. H., Sperry, Steunenberg, Suydam, Swanger, and Mr. Speaker. Total, 35.

And so the rules were suspended and the resolution was read the third time.

Question being "Shall the resolution pass?"

The ayes and nays were taken with the following result:

Ayes: Armstrong, Ballentine, Briggs, Caldwell, Cameron, Casey, Dryden, Emery, Ethel, Frederickson, Goodnight, Green, Hanley, Hawkins, Hixon, Irvine, Jones, King, Lyons, Martin, Merrell, Monroe, Porter, Price, Pyeatt, Ramsey, Scattaboe, Scofield, Smith, W. H., Smith, B. H., Sperry, Steunenberg, Suydam, Swanger, and Mr. Speaker. Total, 35.

And so the resolution passed.

* * * * *

The hour of 12 o'clock m. having arrived, the speaker announced as the next in order the balloting for United States Senators, and directed the clerk to call the roll.

The roll being called, thirty-five votes were cast, of which

Wm. H. Clagett received 6.

Fred T. Dubois received 13.

Edward A. Stevenson received 6.

Wm. J. McConnell received 5.

Geo. L. Shoup received 5.

The members voting for Mr. Clagett were: Messrs. Armstrong, Cameron, Hanley, Porter, Scofield, and Sperry—6.

Those voting for Mr. Dubois were: Messrs. Briggs, Caldwell, Ethel, Frederickson, Goodnight, Hixon, King, Lyon, Merrell, Monroe, Price, Ramsey, and Mr. Speaker—13.

Those voting for Mr. Stevenson were: Messrs. Ballentine, Dryden, Irwin, Jones, Smith, B. H., and Steunenberg—6.

Those voting for Mr. McConnell were: Messrs. Casey, Green, Hawkins, Martin, and Scattaboe—5, and

Those voting for Mr. Shoup were: Messrs. Emery, Porter, Pyeatt, Smith, W. H., and Swanger—5.

Mr. Mills being absent.

And so the speaker announced that the house of representative has failed to give a majority of the whole number of votes cast to any person.

On motion of Mr. Emery, the house took a recess until 2.30 o'clock p. m.

* * * * *

On motion of Mr. Caldwell, the house adjourned.

F. A. FENN,
Speaker.

Attest:

CHAS. H. REED,
Chief Clerk.

WEDNESDAY, TENTH DAY.

HOUSE OF REPRESENTATIVES,
Boise City, Idaho, Dec. 17, 1890.

House called to order at 10 a. m.

Mr. Speaker in the chair.

Prayer by the chaplain.

Roll called.

Absent: Messrs. Caldwell, Casey, Hixon, Martin, Merrill, Mills, Porter, Ramsey, W. H. Smith, and Steunenberg.

Journal of yesterday read and approved.

* * * * *

MESSAGE FROM THE SENATE.

OFFICE OF THE SECRETARY OF THE SENATE,
Boise City, Idaho, Dec. 17, 1890.

MR. SPEAKER. I am instructed to inform your honorable body that the senate has had under consideration and passed senate concurrent resolution No. 5, providing that the lieutenant-governor shall preside during the joint session of the legislature.

Mr. Emery moved that the rules be suspended and the house proceed to consideration of S. C. R. No. 5.

Motion prevailed.

Mr. Price offered the following substitute for S. C. R. No. 5:

Resolved by the house of representatives (the senate concurring), That the speaker of the house preside at all joint assemblies of the senate and house during the present session.

The ayes and nays were called for and taken with the following result:

Ayes: Ballentine, Caldwell, Goodnight, Irvine, King, Monroe, Price, Steunenberg. Total, 8.

Nays: Armstrong, Briggs, Cameron, Casey, Dryden, Emery, Ethel, Fredrickson, Green, Hanley, Hawkins, Hixon, Jones, Lyons, Martin, Merrill, Porter, Pyeatt, Scattaboe, Schofield, W. H. Smith, B. H. Smith, Suydam, Swanger, Mr. Speaker. Total, 26.

And so the substitute was rejected.

On motion of Mr. Emery, S. C. R. No. 5 was then concurred in.

By unanimous consent Mr. Price offered the following resolution, which was adopted:

Resolved, That the chief clerk forthwith inform the Senate that the House is in session and ready to receive the Senate in joint assembly for the purpose of balloting for the election of a United States Senator.

The sergeant-at-arms announced the members of the senate and its officers in waiting, and, by direction of the speaker, were admitted to the house.

JOINT SESSION.

The joint session of the two houses was called to order by the lieutenant-governor, the president of the senate.

The roll of the senate was then called by the secretary of the senate; all present.

The chief clerk then called the roll of the house; all present, except Mr. Mills; excused.

The president then read from the Revised Statutes of the United States that portion relating to the election of United States Senators.

The secretary of the senate read from the journal that portion of the proceedings of yesterday relating to the ballot taken for United States Senators, and the chief clerk of the house read from the journal of the house yesterday that portion relating to the ballot for United States Senators.

It appearing therefrom that the same person has not received a majority of all the votes in each house, the president directed that the joint assembly proceed to choose, by a *viva voce* vote of each member present, a Senator.

The rolls of the respective houses were then called with the following result:

Total number of votes cast were 53, of which William J. McConnell received 9, William H. Clagett received 8, Geo. L. Shoup received 9, Fred T. Dubois received 17, Alexander E. Mayhew received 3, Edward A. Stevenson received 7.

Those voting for Mr. McConnell were Messrs. Brigham, De Lamar, Gunn, Wells, and Wing, of the Senate, and Messrs. Casey, Green, Martin, and Scattaboe, of the House—9.

Those voting for Mr. Clagett were Messrs. Finch and Langrishe, of the Senate, and Messrs. Armstrong, Cameron, Hauley, Porter, Scofield, and Sperry, of the House—8.

Those voting for Mr. Shoup were Messrs. Gray, McPherson, and Shoup, of the Senate, and Messrs. Emery, Hawkins, Pyeatt, W. H. Smith, Suydam, Swanger, of the House—9.

Those voting for Mr. Dubois were Messrs. Rodgers, Smith, Underwood, and Weiler, of the Senate, and Messrs. Briggs, Caldwell, Ethel, Frederickson, Goodnight, Hixson, King, Lyon, Merrill, Monroe, Price, Ramsey, and Mr. Speaker—17.

Those voting for Mr. Stevenson were Messrs. Branstetter, Dempsey, Jewell, and White, of the Senate, and Messrs. Irwin, Jones, and B. H. Smith, of the House—7.

And those voting for Mr. Mayhew were Messrs. Ballentine, Dryden, and Steunenberg of the House—3.

Absent, Mr. Mills, of the House.

No person having received a majority of all the votes cast, Mr. Wells moved that a second vote be taken; which motion prevailed.

SECOND BALLOT.

The rolls of the respective houses were then called, with the following result:

Total number of votes cast, 53; of which William J. McConnell received 5, Fred T. Dubois received 17, William H. Clagett received 8, Geo. L. Shoup received 13, Alexander E. Mayhew received 5, and Edward A. Stevenson received 5.

Those who voted for Mr. McConnell were Mr. Brigham, of the Senate, and Messrs. Casey, Green, Martin, and Scattaboe, of the House—5.

Those who voted for Mr. Dubois were Messrs. Rodgers, Smith, Underwood, and Weiler, of the Senate, and Messrs. Briggs, Caldwell, Ethel, Fredrickson, Goodnight, Hixson, King, Lyon, Merrell, Monroe, Price, Ramsey, and Mr. Speaker, of the House—17.

Those voting for Mr. Clagett were Messrs. Finch and Langrishe, of the Senate, and Messrs. Armstrong, Cameron, Hanley, Porter, Scofield, and Sperry, of the House—8.

Those voting for Mr. Shoup were Messrs. De Lamar, Gray, Gunn, McPherson, Shoup, Wells, and Wing, of the Senate, and Messrs. Emery,

Hawkins, Pyeatt, W. H. Smith, Suydam, Swanger, of the House—13.

Those voting for Mr. Mayhew were Messrs. Ballentine, Dryden, Irwin, Jones, and Steunenberg, of the House—5.

Those voting for Mr. Stevenson were Messrs. Branstetter, Dempsey, Jewell, and White, of the Senate, and Mr. B. H. Smith, of the House—5.

No person having received a majority of all the votes cast, the President declared there was no election.

On motion of Mr Gray, of the senate, the joint assembly adjourned.

* * * * *

THURSDAY.—ELEVENTH DAY.

HOUSE OF REPRESENTATIVES,

Boisé City, Idaho, December 18, 1890.

House called to order at 11.30 a. m.

Mr. Speaker in the chair.

Prayer by the chaplain.

Roll called.

Absent, Messrs. Cameron and Porter.

Journal of yesterday read and approved.

* * * * *

The Sergeant-at-Arms announced the members of the Senate and its officers in waiting, and by direction of the Speaker were admitted to the House.

JOINT SESSION.

The joint session of the two houses was called to order by the Lieutenant-Governor, the president of the Senate.

The roll of the Senate then called by the secretary of the Senate.

All present.

The Chief Clerk then called the roll of the House.

All present.

The Chief Clerk of the House read from the journal of the House of yesterday that portion relating to the joint assembly, which was approved.

Senator Gunn offered the following resolution :

Resolved, By the joint assembly of the Senate and House of Representatives of the Legislature of the State of Idaho, That we proceed to elect two United States Senators to fill existing vacancies, and that after such elections we immediately proceed to elect one United States Senator to fill vacancy occurring March the 4th, 1891.

Senator Gray then offered the following amendment :

I move to amend the resolution to read as follows : That we do now proceed to elect one Senator from North Idaho, and then proceed to elect one Senator from South Idaho to fill vacancies now existing.

Senator raised the point of order that the amendment was not in order, which was sustained by the Chair.

Senator Gray then withdrew his amendment and offered the following as a substitute for the original resolution :

I move that the resolution read as follows : That we proceed to elect two Senators to fill the vacancies now existing.

The question being on the adoption of the substitute the ayes and nays were called for and taken with the following result :

SENATE ROLL CALL.

Ayes: Branstetter, De Lamar, Dempsey, Finch, Gray, Jewell, Langrische, White; total, 8.

Nays: Brigham, Gunn, McPherson, Rogers, Shoup, Smith, Underwood, Weiler, Wells, Wing; total, 10.

HOUSE ROLL CALL.

Ayes: Armstrong, Ballentine, Cameron, Casey, Dryden, Emory, Hanley, Hawkins, Irwin, Jones, Martin, Porter, Scofield, Smith, W. H., Smith, B. H. Sperry, Steunenberg; total 17.

Nays: Briggs, Caldwell, Ethel, Fenn, Frederickson, Goodnight, Green, Hixon, King, Lyons, Merrell, Mills, Monroe, Price, Pyeatt, Ramsey, Scattaboe, Suydam, and Swanger; total 19.

Total ayes in all, 25.

Total nays in all, 29.

And so the substitute was rejected.

The question recurring on the original resolution, the ayes and nays were taken with the following result:

ROLL CALL OF SENATE.

Ayes: Brigham, Gunn, McPherson, Rogers, Shoup, Smith, Underwood, Weiler, Wells, Wing; total 10.

Nays: Branstetter, De Lamar, Dempsey, Finch, Gray, Jewell, Langrische, White; total 8.

ROLL CALL OF HOUSE.

Ayes: Briggs, Caldwell, Ethel, Fenn, Frederickson, Goodnight, Green, Hixon, King, Lyons, Merrell, Mills, Monroe, Price, Pyeatt, Ramsey, Scattaboe, Suydam, Swanger; total 19.

Nays: Armstrong, Ballentine, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, Jones, Martin, Porter, Scofield, Smith, W. H., Smith, B. H., Sperry, Steunenberg; total 17.

Total ayes in all, 29.

Total nays in all, 25.

And so the resolution was adopted.

The president directed that the joint assembly proceed to the election of a United States Senator to fill an existing vacancy by a *viva voce* vote of each member present.

The rolls of the respective houses were then called, with the following result:

Total number of votes, 54: of which George L. Shoup received 31, William H. Clagett received 12, Alexander E. Mayhew received 10, W. J. McConnell received 1.

Those voting for George L. Shoup were—Messrs. Brigham, Gunn, McPherson, Rogers, Shoup, Smith, Underwood, Weiler, and Wells, of the senators; and Messrs. Briggs, Caldwell, Emery, Ethel, Fenn, Frederickson, Goodnight, Green, Hixon, King, Lyon, Martin, Merrell, Mills, Monroe, Price, Pyeatt, Ramsey, Scattaboe, Smith, W. A., Suydam, and Swanger, of the house—31.

Those voting for William H. Clagett were—Messrs. De Lamar, Finch, Gray, and Langrische, of the senate; and Messrs. Armstrong, Cameron, Casey, Hanley, Hawkins, Porter, Scofield, and Sperry, of the house—12.

Those voting for Alexander E. Mayhew were—Messrs. Branstetter, Dempsay, Jewell, and White, of the senate; and Messrs: Ballentine, Dryden, Irwin, Jones, Smith, B. H., and Steunenberg, of the house—10.

Mr. Wing of the senate voting for William H. McConnell.

George L. Shoup, having received a majority of all the votes cast, was declared duly elected United States Senator.

Mr. Emery moved to adjourn, upon which the yeas and nays were called and taken, with the following result:

ROLL CALL OF SENATE.

Ayes: Branstetter, De Lamar, Dempsay, Finch, Gray, Jewell, Langrische, White; total, 8.

Nays: Brigham, Gunn, McPherson, Rogers, Shoup, Smith, Underwood, Weiler, Wells, Wing; total, 10.

ROLL CALL OF HOUSE.

Ayes: Armstrong, Ballentine, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Jones, King, Porter, Scofield, Smith, W. H., Smith, B. H., and Steunenberg; total, 15.

Nays: Briggs, Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Lyons, Martin, Merrell, Mills, Monroe, Price, Pyeatt, Ramsey, Scattaboe, Sperry, Suydam, Swanger, Mr. Speaker; total, 20.

Ayes in all, 23.

Nays in all, 30.

And so the motion to adjourn was lost.

The joint assembly then proceeded to the election of a United States Senator to fill the other existing vacancy.

SECOND BALLOT.

The rolls of the respective houses were then called with the following results:

Total number of votes cast, 54; of which W. J. McConnell received 29, Wm. H. Clagett received 15, and Geo. Ainslie received 10.

Those voting for W. J. McConnell were—Messrs. Brigham, Gunn, McPherson, Rogers, Shoup, Smith, Underwood, Weiler, Wells, and Wing, of the senate; and Messrs. Briggs, Caldwell, Ethel, Fenn, Frederickson, Goodnight, Green, Hixon, Lyon, Martin, Merrell, Mills, Monroe, Price, Pyeatt, Ramsey, Scattaboe, Suydam, and Swanger, of the house—29.

Those voting for W. H. Clagett were—Messrs. De Lamar, Finch, Gray, Langrische, of the senate; and Messrs. Armstrong, Cameron, Casey, Emery, Hanley, Hawkins, King, Porter, Scofield, Smith, W. H., and Sperry, of the house—15.

Those voting for Mr. Ainslie were—Messrs. Branstetter, Dempsay, Jewell, and White, of the senate; and Messrs. Ballentine, Dryden, Irwin, Jones, Smith, B. H., and Steunenberg, of the house—10.

Mr. McConnell having received a majority of all the votes cast was declared duly elected United States Senator.

Senator Gray moved to adjourn, upon which the ayes and nays were called for and taken, with the following result:

ROLL CALL OF SENATE.

Ayes: Branstetter, De Lamar, Dempsay, Finch, Gray, Jewell, Langrische, White, and Wing; total, 9.

Nays: Brigham, Gunn, McPherson, Rogers, Shoup, Smith, Underwood, Weiler, Wells; total, 9.

HOUSE ROLL CALL.

Ayes: Armstrong, Ballentine, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irvine, Jones, Porter, Scofield, Smith, W. H., Smith, B. H., Sperry, Steunenberg; total, 16.

Nays: Briggs, Caldwell, Ethel, Fenn, Frederickson, Goodnight, Green, Hixon, King, Lyons, Martin, Merrell, Mills, Monroe, Price, Pyeatt, Ramsey, Scattaboe, Suydam, and Swanger; total, 20.

Total of all ayes, 25.

Total of all nays, 29.

And so the motion to adjourn was lost.

The joint assembly then proceeded to the election of a United States Senator whose term should begin March 1, 1891.

By request of Senator Gray his objection to the election of a third United States Senator is entered on the journal.

THIRD BALLOT.

The rolls of the respective houses were called with the following result:

Total number of votes cast 54; of which Fred T. Dubois received 32, Wm. H. Clagett received 12, and John Haley received 10.

Those voting for Mr. Dubois were—Messrs. Brigham, Gunn, McPherson, Rogers, Shoup, Smith, Underwood, Weiler, Wells, and Wing, of the Senate; and Messrs. Briggs, Caldwell, Casey, Ethel, Fenn, Frederickson, Goodnight, Green, Hixon, King, Lyons, Martin, Merrell, Mills, Monroe, Price, Pyeatt, Ramsey, Scattaboe, Sperry, Suydam, and Swanger of the House—32.

Those voting for Wm. H. Clagett were—Messrs. De Lamar, Finch, Gray, and Langrische, of the Senate; and Messrs. Armstrong, Cameron, Emery, Hanley, Hawkins, Porter, Scofield, Smith, W. H., of the House—12.

Those voting for Mr. Haley were—Messrs. Branstetter, Dempsey, Jewell, and White, of the Senate; and Messrs. Ballentine, Dryden, Irwin, Jones, Smith, B. H., and Steunenberg, of the House—10.

Mr. Dubois having received a majority of all the votes cast was declared duly elected U. S. Senator for the term commencing March 1, 1891.

On motion of Mr. Wells, the joint assembly dissolved.

HOUSE IN SESSION.

Mr. Speaker in the chair.

On motion of Mr. Green, the house adjourned.

F. A. FENN,
Speaker.

Attest:

CHAS. H. REED,
Chief Clerk.

FRIDAY—TWELFTH DAY.

HOUSE OF REPRESENTATIVES,
Boise City, Idaho, Dec. 19th, 1890.

House called to order at 10 a. m.

Mr. Speaker in the chair.

Prayer by the chaplain.

Roll called. Absent, Mr. Casey.

Journal of yesterday read.

Mr. Ballentine moved the following amendment to the journal:

Mr. Gray objected to the balloting for United States Senator for the term commencing March 4th, 1891, and ending March 3d, 1897, upon the ground—

1st. That such procedure was in violation of the resolutions of the separate houses, that they proceed to the election of two United States Senators to fill the existing vacancies.

2nd. That the proposed voting for United States Senator for the long term was unconstitutional and illegal, and not in accordance with the Federal statutes relating thereto. That no voting or action had been taken in either house or resolution passed by them prior to the action taken by the joint convention for said election.

Question being, Shall the amendment be adopted? the ayes and nays were taken with the following result:

Those voting aye, were Messrs. Armstrong, Ballentine, Cameron, Emery, Dryden, Hawkins, Irvine, Martin, Porter, Settaboe, Schofield, Smith, B. H. Steunenburg—13.

Those voting in the negative, Messrs. Briggs, Caldwell, Casey, Ethel, Goodnight, Green, Hanley, Hixon, Jones, King, Lyon, Merrill, Mills, Monroe, Price, Pyeatt, Ramsey, Smith, W. H. Sperry, Suydam, Swanger, and Mr. Speaker—23.

And so the amendment was rejected and the journal approved.

FRANK A. FENN,
Speaker.

Attest:

CHARLES H. REED,
Chief Clerk.

UNITED STATES OF AMERICA,

Department of State, secretary's office, Idaho.

I, A. J. Pinkham, secretary of the State of Idaho, do hereby certify that the annexed are true and correct extracts from the journal of the house of representatives of the first session of the legislature convened at Boise City, December 8th, 1890, and now of record in this office.

In testimony whereof, I have hereunto set my hand and affixed the great seal of the State. Done at Boise City, the capital of Idaho, this 25th day of December, A. D., 1890.

A. J. PINKHAM,
Secretary of State.

[SEAL.]

Article IV, Sec. 15, of the constitution of the State of Idaho, provides:

"The seal of the Territory of Idaho as now used shall be the seal of the State until otherwise provided by law."

FIRST DAY.

SENATE CHAMBER,
Boise City, Idaho, Dec. 8th, 1890.

At the hour of 12 o'clock noon on Monday the 8th day of December, A. D. 1890, being the day and hour designated in the proclamation of the governor of the State convening the legislature of the State of Idaho for the first session, the members-elect of the Senate assembled in the Senate chamber of the capitol at Boise City, and were called to

order by Lieutenant-Governor Norman B. Willey, president of the Senate.

After prayer by the Rev. Mr. Skidmore, Mr. Gunn moved that M. C. Athey be elected secretary of the senate *pro tem*.

The president then read the proclamation of the governor convening the legislature of the State of Idaho at Boise City, Idaho, on the 8th day of December, 1890.

The president of the senate then called the roll of members as certified to by the secretary of state, and the following-named gentlemen responded to their names:

Ada County.—John S. Gray and H. C. Branstetter.

Alturas County.—James Gunn.

Bingham County.—George B. Rogers.

Boise County.—Stephen Dempsay.

Custer County.—James M. Shoup.

Elmore County.—Green White.

Latah County.—J. W. Brigham.

Lemhi County.—W. M. McPherson.

Logan County.—Edward C. Smith.

Shoshone County.—John A. Finch and J. S. Langrishe.

Washington County.—Edward S. Jewell.

Bear Lake, Bingham, and Oneida Counties.—J. L. Underwood.

Cassia and Owyhee.—J. R. DeLamar.

Idaho and Nes Perce.—I. S. Weiler.

Latah and Nes Perce.—William Wing.

Latah and Kootenai.—J. M. Wells.

The oath of office was then administered to the senators-elect by Mr. Justice Sullivan, chief justice of the supreme court of the State of Idaho.

Mr. Gray moved that the Senate adjourn until 2.30 o'clock p. m. of this day. The motion was carried.

* * * * *

Senate met pursuant to adjournment at 2.30 o'clock p. m., the lieutenant-governor presiding. Roll was called and all the senators were present.

Mr. Shoup moved that a committee of five be appointed by the chair to report rules for the government of the senate. The motion was carried.

Mr. Gray moved that the rules of the legislative council of the fifteenth session be adopted, so far as consistent, for the regulation of the senate until the report of the committee on rules be adopted. The motion was carried.

Mr. Brigham moved the president appoint a committee of three on organization to designate and determine the number and order of offices to be filled by the senate. The motion was carried. The president of the senate then announced the following committees:

Committee on rules of government of the Senate.—Messrs. Shoup, Weiler, Langrishe, Gray and Branstetter.

Committee on Organization.—Messrs. Brigham, Gunn and Jewell.

* * * * *

Mr. Wells moved that the senate adjourn until to-morrow at 10 o'clock a. m.

Which motion prevailed, and the senate adjourned.

N. B. WILLEY,
President of the Senate.

Attest:
M. C. ATHEY,
Secretary.

SECOND DAY.

SENATE CHAMBER,
Boise City, December 9th, 1890.

Senate met pursuant to adjournment at 10 o'clock a. m.

Senate was opened by prayer by Rev. Mr. Gowan.

Roll called. All present.

Committee on organization made the following report:

Mr. PRESIDENT: We, your committee on organization, appointed to designate and determine the number and order of the offices to be filled by the senate ask leave to report, as follows:

- 1st. President *pro tempore* of the senate.
- 2d. Secretary of the senate.
- 3d. Assistant secretary of the senate.
- 4th. Engrossing clerk.
- 5th. Assistant engrossing clerk.
- 6th. Enrolling clerk.
- 7th. Assistant enrolling clerk.
- 8th. Sergeant-at-arms.
- 9th. Two pages.
- 10th. Door-keeper.
- 11th. Janitor.
- 12th. Chaplain.

Respectfully submitted.

J. W. BRIGHAM, *Chairman.*

Mr. Weiler moved that the report be adopted.

Which motion prevailed.

Mr. Wells moved that the senate do now proceed to the election of officers as designated in the report of the committee on organization.

Mr. Gray moved to amend by adding the words that the election be by ballot.

Mr. Wells accepted the amendment.

The motion prevailed.

The president of the senate appointed Messrs. Finch and Dempsay as tellers.

Mr. Finch placed in nomination Mr. M. C. Athey for secretary of the senate.

Mr. Gunn moved that the secretary cast the vote of the senate for M. C. Athey for secretary of the senate.

Which motion prevailed.

The president declared M. C. Athey duly elected secretary of the senate.

Mr. Weiler placed Mr. Robert Larimer in nomination for assistant secretary of the senate.

Mr. Finch moved that the secretary cast the vote of the senate for Mr. Robert Larimer for assistant secretary of the senate.

Mr. Weiler moved to amend by adding the words "that in all other cases where there is but one candidate for the office the same proceeding shall be had."

Mr. Finch accepted the amendment.

The motion prevailed.

The president declared Mr. Robert Larimer duly elected as assistant secretary of the senate.

Mr. Wells moved that the secretary cast the vote of the senate for Mr. S. B. Smith for engrossing clerk of the senate,

Which motion prevailed.

• • • • •

MESSAGE FROM THE HOUSE.

Which motion prevailed.

* * * * *
Mr. Brigham moved that the secretary cast the vote of the senate for Rev. Mr. Gowan for chaplain of the senate.

Which motion prevailed.

Mr. White moved that the officers and attachés of the senate be in the senate chamber at 2 o'clock this afternoon to take the oath of office.

Which motion prevailed.

Mr. Finch moved that the senate adjourn until 2 o'clock this afternoon.

Which motion prevailed.

AFTERNOON SESSION.

The senate resumed its session at 2 o'clock p. m.

The president in the chair.

Roll called. All present.

* * * * *
The oath of office was administered to the attachés of the senate by the president.

* * * * *
Mr. Gunn moved that the secretary proceed to the chamber of the house of representatives of the first legislative assembly of the State of Idaho and inform them that the senate is now organized and ready for the transaction business.

The motion prevailed.

* * * * *

Mr. Wells moved that a committee of two be appointed to act with a like committee of the house to wait upon his excellency the governor, to inform him that the legislature is now organized and ready to receive any communication he desires to make.

The motion prevailed.

The president appointed as such committee Messrs. Wells and Dempsey.

* * * * *

MESSAGE FROM THE HOUSE.

OFFICE OF CHIEF CLERK OF THE HOUSE OF REPRESENTATIVES,
Boise City, Idaho, Dec. 9th, 1890.

MR. PRESIDENT: I am instructed to inform your honorable body that the house of representatives has appointed Messrs. Monroe, Ballentine, and Porter, as a committee to act with a like committee from the senate, to wait upon his excellency, George L. Shoup, governor of Idaho, and inform him that the legislature of Idaho is organized and ready to receive any communication he may desire to make.

Respectfully,

CHARLES H. REED,
Chief Clerk.

Mr. Gunn moved that the secretary of the senate proceed to the house and announce that a committee consisting of three senators have been appointed by this body to act with a like committee from the house, and inform his excellency George L. Shoup that the legislative assembly is now organized and ready to receive any communication he may desire to make.

The motion prevailed.

Messrs. Wells, Dempsey, and Gunn, of the committee appointed to wait upon the governor, were excused.

* * * * *

On motion of Mr. De Lamar the Senate adjourned until ten o'clock a. m. to-morrow.

N. B. WILLEY,
President of the Senate.

Attest:

M. C. ATHEY,
Secretary.

FIFTH DAY.

BOISE, IDAHO, Dec. 12, 1890.

The senate met at ten o'clock a. m., pursuant to adjournment.

Mr. President in the chair.

Roll called.

All present except Mr. Wells.

Prayer by the chaplain.

Journal of yesterday was read and approved.

* * * * *

Mr. Underwood offered the following resolution:

Resolved, That both houses of the legislature meet, as provided by law, on Saturday, the 13th inst., at the hour of 11 o'clock a. m., and proceed to ballot for United States Senator.

MESSAGE FROM THE GOVERNOR.

* * * * *

After reading the message from the governor, the resolution offered by Mr. Underwood was taken up and considered.

Mr. Gunn offered the following substitute:

Resolved, by the senate, the house concurring, that the senate and house of representatives proceed to elect, as provided by law, United States Senators at the hour of 12 o'clock m., on Tuesday, the 16th day December, 1890.

Which was adopted.

And, on motion of Mr. Gunn, was referred to the committee on judiciary. * * *

On motion of Mr. Gray the senate adjourned until 10 o'clock to morrow.

N. B. WILLEY,
President of the Senate.

Attest:
M. C. ATHEY,
Secretary.

SIXTH DAY.

SENATE CHAMBER,
Boise City, Dec. 13, 1890.

The senate met at 10 o'clock a. m., pursuant to adjournment.

Mr. President in the chair.

Prayer by the chaplain.

Roll called.

All present except Messrs. Branstetter and Langrishe.

Journal of yesterday was read, corrected, and approved. * * *

Mr. Gray, from the committee on the judiciary, submitted the following report:

SENATE CHAMBER, *Dec. 13, 1890.*

Mr. PRESIDENT: The judiciary committee, to whom was referred senate concurrent resolution, No. 3, that the senate and house of representatives proceed to elect, as provided by law, United States Senators at the hour of 12 o'clock m., on Tuesday, Dec. 16, 1890, have had the same under consideration and respectfully report the same back, with the recommendation that it do pass.

GRAY, *Chairman.*

* * * * *

Senate concurrent resolution No. 3 was taken up and considered.

Mr. Gunn moved that the resolution be adopted.

Mr. Shoup moved that the resolution be indefinitely postponed.

Which motion, after discussion, was withdrawn and the motion to adopt was agreed to.

N. B. WILLEY,
President of the Senate.

Attest:
M. C. ATHEY,
Secretary.

NINTH DAY.

SENATE CHAMBER,
Boise, Dec. 16, 1890.

The senate met at 11.30 o'clock a. m., pursuant to adjournment.

Mr. President in the chair.

Prayer by the chaplain.

Roll called.

All present except Mr. De Lamar, who was excused.

Journal of yesterday was read, corrected, and approved.

* * * * *

At 12 o'clock meridian the president announced the business before the senate to be the consideration of the subject contained in senate concurrent resolution No. 3, to wit, the election of United States Senators.

After the reading of that portion of the United States Revised Statutes relating thereto, the senate proceeded to vote for United States Senator. Upon calling the roll, the vote stood as follows:

Those who voted for Fred T. Duboise, were Messrs. Rogers, Smith, Underwood, and Weiler—4.

Those who voted for George L. Shoup were Messrs. Gray, McPherson, and James M. Shoup—3.

Those who voted for W. J. McConnell were Messrs. Brigham, Gunn, Wells, and Wing—4.

Those who voted for Wm. H. Clagett were Messrs. Finch and Langrishe—2.

Those who voted for Mr. Ed. A. Stevenson were Messrs. Branstetter, Dempay, Jewell, and White—4.

Whole number of votes cast, 17. Necessary to a choice, 9.

The president announced that not a majority of all the senators elected having voted for United States Senator, therefore there has been no election.

Mr. Gunn moved that the senate do now proceed to elect a second United States Senator to fill existing vacancy.

Mr. Weiler moved that the senate take a recess until 2 o'clock p. m. Which motion prevailed.

Senate resumed its session at 2 o'clock p. m.

Mr. President in the chair.

Roll called.

All present except Messrs. De Lamar and Weiler.

* * * * *

MESSAGE FROM THE HOUSE.

OFFICE OF CHIEF CLERK OF HOUSE OF REPRESENTATIVES,
Boise City, Dec. 16, 1890.

MR. PRESIDENT: I am instructed to inform your honorable body that the house of representatives has had under consideration and passed senate concurrent resolution No. 3, requiring the senate and house of representatives to proceed to elect United States Senators as provided by law, which are herewith transmitted.

CHARLES H. REED,
Chief Clerk.

At 4.30 o'clock p. m., on motion of Mr. Gunn, the senate adjourned until 10 o'clock a. m. to-morrow.

N. B. WILLEY,
President of the Senate.

Attest:

The senate met at 11 o'clock a. m., pursuant to adjournment.

Mr. President in the chair.

Prayer by the chaplain.

Roll called.

All present except Messrs. Finch and Smith.

Journal of yesterday read and approved.

* * * * *

Mr. Shoup introduced the following senate concurrent resolution, and moved its adoption:

Resolved by the Senate, the house of representatives concurring, That until otherwise provided the lieutenant governor shall preside at all joint conventions of the two branches of the legislature.

Which was agreed to.

MESSAGE FROM THE HOUSE.

OFFICE OF CHIEF CLERK OF THE HOUSE OF REPRESENTATIVES,
Boise City, Idaho, Dec. 17th, 1890.

Mr. PRESIDENT: I am instructed to inform your honorable body that the house of representatives has had under consideration and adopted senate concurrent resolution No. 5, providing that the lieutenant governor shall preside during joint sessions of the senate and house of representatives, which is herewith transmitted.

CHARLES H. REED,
Chief Clerk.

MESSAGE FROM THE HOUSE.

OFFICE OF CHIEF CLERK OF THE HOUSE OF REPRESENTATIVES,
Boise City, Idaho, Dec. 17th, 1890.

Mr. PRESIDENT: I am instructed to inform your honorable body that the house of representatives is now in session and ready to receive the senate in joint session for the purpose of balloting for the election of a United States Senator.

Respectfully,

CHARLES H. REED,
Chief Clerk.

The senate proceeded to the hall of the house of representatives.

After the adjournment of the joint session the senate reassembled in the senate chamber.

Mr. President in the chair.

And at 12.45 o'clock p. m., on motion of Mr. Weiler, the senate took a recess until 2.30 o'clock p. m.

The seal of the Territory of Idaho as now used shall be the seal of the State until otherwise provided by law.

IN THE SENATE OF THE UNITED STATES.

JANUARY 12, 1890.—Ordered to lie on the table and be printed.

Mr. PLATT presented the following

MEMORIAL FROM CITIZENS OF THE UNITED STATES PRAYING
THE PASSAGE OF THE BILL (H. R. 10881) RELATING TO INTER-
NATIONAL COPYRIGHT.

To the honorable the Senate of the United States :

The undersigned citizens of the United States pray your honorable body to pass the bill (H. R. 10881) relating to international copyright.

The honor of the nation demands that authors everywhere, whose productions inure to the use and advantage of our people, should have a reasonable compensation for their skill and industry secured to them by law. In the absence of such a law, the works of American authors are subjected to an unfair competition with foreign literature, whereby the prosperity and vigor of the literary art amongst our people are greatly depressed. The enactment of such a law would powerfully encourage the production of native works by native authors, thus preserving and spreading American principles and ideas in our own land and multiplying their influence abroad. The stimulus to American authors supplied by such a law would operate, conformably to natural laws, to create, establish, and maintain amongst us for all time a sound, cheap native literature.

WASHINGTON, January 12, 1891.

IN THE SENATE OF THE UNITED STATES.

JANUARY 12, 1891.—Ordered to lie on the table and be printed.

Mr. CULLOM presented the following

**MEMORIAL OF CITIZENS OF ILLINOIS REMONSTRATING AGAINST
THE PASSAGE OF THE CONGER LARD BILL, AND PRAYING THE
PASSAGE OF THE BILL TO PREVENT THE ADULTERATION OF
FOOD PRODUCTS.**

**MEMORIAL OF THE FARMERS' MUTUAL BENEFIT ASSOCIATION OF
THE STATE OF ILLINOIS.**

SPRINGFIELD, ILL., *October 21, 1890.*

Hon. LEVI P. MORTON,

President of the Senate of the United States:

The undersigned, delegates to the State convention of the Farmers' Mutual Benefit Association of the State of Illinois, held this day at Springfield, Ill., most respectfully present this, their petition, to the Senate of the United States, praying for the speedy passage of Senate bill No. 3991, commonly known as the Paddock pure food bill, which bill was introduced in behalf of the Farmers' Alliance of Nebraska by Hon. A. S. Paddock, a Senator of that State, and chairman of the Agricultural Committee of the Senate. Said bill, if passed, will prevent the adulteration and misbranding of food and drugs. Senator Paddock, in his able report No. 1366 on the bill, states "that of 376 articles of diet in daily use in every household 255, or more than two-thirds, were found to be adulterated."

The adulteration and sale of these counterfeit articles of food depresses and lowers the price of the honest and genuine food products of the farmer. The Paddock bill is therefore in the interest of the agricultural classes, and while it allows free competition, it compels all food products, under heavy penalties, to be, first, healthful; second, plainly and honestly branded; third, of proper quality or strength; fourth, not "doctored;" fifth, not counterfeit; sixth, made from proper substances; seventh, free from any adulteration whatever; and we therefore pray for its speedy passage.

We earnestly oppose, however, the passage of the Conger compound lard bill, which places a tax on compound lard and prohibitory restriction on the sale of the same and increases the number of revenue officers of the country.

The reasons for our opposition to the Conger bill are as follows:

First. It singles out only one article, which it alleges is adulterated, and provides no remedy for the 255 other articles as set forth and provided for in the Paddock bill.

Second. It increases the number of revenue officials of the country. We already have over 100,000 officeholders who are eating up the substance of the taxpayer.

Third. The Conger lard bill was introduced at the request of a Boston pork-packer; the Paddock bill at the instance of the Farmers' Alliance of Nebraska. The Conger bill is supported by all the pork-packers of the country and by the Big Four of Chicago. It will create a monopoly and will enable the large packers to form a lard trust. The Paddock bill has the united support of the farmers of the entire country.

Fourth. The Farmers' Alliances of Alabama, Arkansas, Florida, Georgia, North Carolina, South Carolina, Louisiana, Mississippi, Tennessee, and Texas protest against the passage of the Conger bill, and a remonstrance against its passage was signed by 10,000 farmers from Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, Kansas and Colorado at the St. Louis Fair, October 11, the last past.

Fifth. The Farmers' Alliance, at their national convention held in St. Louis, Mo., in December, 1889, adopted the following plank in their declaration of principles: "*Believing in the doctrine of 'equal rights to all and special privileges to none,' we demand that taxation, National or State, shall not be used to build up one interest or class at the expense of the other.*" We believe that the money of the country should be kept as much as possible in the hands of the people, and hence we demand that all revenues, National, State, or county, shall be limited to the necessary expenses of the Government, economically and honestly administered." And the Farmers' Congress, held again in August of this year (1890) at Council Bluffs, Iowa, reaffirmed said plank in the following language: "*Believing in the doctrine of equal rights to all and special privileges to none, we demand that our national legislation shall be so framed as not in the future to foster and build up one industry at the expense of another.*"

Therefore, as the Conger bill builds up the industries of the hog-packers, the big four, and the monopolists generally, at the expense of the industries of compound lard, we declare it to be contrary to the intent and spirit of the platform and organization of the National Farmers' Congress of America.

Therefore, opposed to fraud, we favor the Paddock pure food bill.

Opposing, however, centralization, opposing increase in the officials of the country, opposing class and sectional legislation, we oppose the Conger lard bill, and we remain, respectfully,

IN THE SENATE OF THE UNITED STATES.

JANUARY 17, 1891.—Presented, referred to the Committee on the District of Columbia, and ordered to be printed.

STATEMENT OF BUILDINGS RENTED BY THE UNITED STATES IN
THE DISTRICT OF COLUMBIA, INCLUDING THE BUILDINGS
RENTED FOR THE USE OF THE DISTRICT GOVERNMENT.

TREASURY DEPARTMENT,
January 16, 1891.

SIR: In reply to your communication of the 11th ultimo, I have the honor to inclose herewith a list of the buildings in the District of Columbia rented by the Government and the amount of rental paid therefor, including buildings rented for the use of the District government. The statement shows a yearly rental paid amounting to \$177,698.

Respectfully, yours,

WM. WINDOM,
Secretary.

Hon. JUSTIN S. MORRILL,
United States Senate.

Statement of buildings rented by the United States in the District of Columbia, including buildings rented for the use of the District government.

Location.	Purpose, etc.	Annual rental.
Rented by Department of State: Seventeenth street NW	Stable and wagon-shed	\$600
Rented by the Treasury Department:		
No. 1308 F street	For Marine-Hospital Service	1,800
No. 1333 and 1335 F street	For Bureau of Statistics	3,070
No. 1428 E street	Treasury stables	650
New Jersey avenue SE	For Coast and Geodetic Survey, main office.	10,500
No. 205 New Jersey avenue SE	For Coast and Geodetic Survey, archives.	6,000
		22,020
Rented by the War Department:		
No. 1814 G street NW	For Medical Dispensary	1,000
Eighteenth and G streets NW	For office of Records of the Rebellion	3,000
Seventeenth street, between F and G	For office of Record and Pension Division.	2,400
		6,400
Rented by the Navy Department:		
No. 1425 New York avenue NW	For Navy Pay Office	720
No. 1707 New York avenue NW	For Naval Dispensary	2,400
Corner of New York avenue and Seventeenth street NW.	For Hydrographic Office	1,500
Pennsylvania avenue and Nineteenth street ...	For Nautical Almanac Office	960
		5,580

Statement of buildings rented by the United States in the District of Columbia, including buildings rented for the use of the District government—Continued.

Location.	Purpose, etc.	Annual rental.
Rented by the Interior Department:		
Northeast corner Eighth and G streets NW....	For Bureau of Education	\$4,000
Northwest corner Eighth and G streets NW ..	For General Land Office	2,000
Atlantic Building, F street NW	For Indian Office	5,500
Hooe Building, F street NW	For Geological Survey	10,000
Sun Building, F street NW	Census Office	1,800
Inter-Ocean Building, Ninth street NW	do	15,870
Lincoln Hall Building, Ninth and D streets NW ..	do	3,600
Second National Bank, Seventh street NW ..	do	5,040
Harrison Building, Third and G streets NW ..	do	12,500
Corner Massachusetts avenue and North Capitol street.	do	4,200
		<u>64,510</u>
Rented by the Post-Office Department:		
Part of Seaton House Building, Louisiana avenue.	For city post-office	8,000
Fourth and East Capitol streets (cellar and first floor).	For branch city post-office	900
No. 1413 F street NW. (first floor)	do	1,000
Northwest corner Eighth and E streets NW ..	For Money-Order Office, Post Office Department.	8,000
No. 914 E street NW	For Money-Order Division, Sixth Auditor's Office.*	4,000
Nos. 418 and 420 Ninth street NW. (second and third floors).	For Topographer's Office	1,500
Nos. 611 and 613 E street NW	For Division of Post-Office Supplies	4,000
Nos. 479 and 481 C street NW	For mail-bag repair shop	3,000
		<u>30,400</u>
Rented by the Department of Labor:		
Building corner New York avenue and Fifteenth street.	For Department of Labor	5,000
Rented by the Interstate Commerce Commission:		
Sun Building (three floors)	Interstate Commerce Commission	<u>11,480</u>
Rented by the District of Columbia:		
First street N W	For District Building	3,600
No. 501 D street N W	For Police Headquarters	1,200
No. 503 D street N W	For Health Office	1,000
Anacostia, District of Columbia	Addition to police-court building	600
	For police station	200
For use of the public schools:		
Seventeenth street, between P and Q streets, NW.	Minor School Building	2,500
H street, between Sixth and Seventh streets, NW.	Miller School Building	1,200
Sixth street, between B and C streets, NE....	Peabody annex	696
Mount Pleasant	First Baptist Church	120
Fourteenth and N streets NW. (two rooms) ..	Memorial Lutheran Church	600
No. 1615 M street NW. (two rooms)	Bethel Hall	480
Nos. 603 and 605 O street NW	Schools	800
No. 628 O street NW	do	600
Nos. 624 and 626 O street NW	do	1,800
No. 917 P street NW. (two rooms)	do	336
No. 15 D street NW	do	360
Anacostia, District of Columbia	Anacostia Lodge, F. A. A. M. (school) ..	400
For use of the District militia:		
Pennsylvania avenue and Seventh street	Center Market Armory	5,000
Fifteenth street NW	Washington Light Infantry Armory	1,500
No. 339 Pennsylvania avenue NW	Third Battalion Armory	900
No. 706 O street NW	Seventh Battalion Armory	1,200
No. 414 Third street NW	Eighth Battalion Armory	1,000
New York avenue, between Thirteenth and Fourteenth streets, NW.	Rink Armory	2,400
No. 702 Seventeenth street NW	Headquarters	1,296
No. 704 Seventeenth street NW	Store-room	120
Nos. 927 and 929 D street NW	Rifle Gallery Armory	1,800
		<u>31,708</u>

* At rate of \$4,000 until February 1, 1891, and \$9,000 thereafter for another building.

Statement of buildings rented by the United States in the District of Columbia, including buildings rented for the use of the District government—Continued.

RECAPITULATION.

Buildings rented by Department of State	\$600
Treasury Department	22,020
War Department	6,400
Navy Department	5,580
Interior Department	64,510
Post-Office Department*	30,400
Department of Labor	5,000
Interstate Commerce Commission	11,480
District of Columbia	31,708
Total	177,698

* And \$5,000 additional after February 1, 1891.

IN THE SENATE OF THE UNITED STATES.

JANUARY 17, 1891.—Ordered to lie on the table and be printed.

Mr. STEWART submitted the following

M O T I O N :

I move that the bill (H. R. 11045) be recommitted to the Committee on Privileges and Elections with instructions to so amend the bill as to provide for elections of members of Congress on days when no other elections are held in the several States and so as to provide for separate and independent registration of such electors as may be qualified to vote for members of Congress.

○

IN THE SENATE OF THE UNITED STATES.

JANUARY 15, 1891.—Ordered to be reprinted as a miscellaneous document.

NOTES OF A HEARING BEFORE THE SENATE COMMITTEE ON
FISHERIES, OF PARTIES INTERESTED IN THE BILL (S. 227,
FORTY-NINTH CONGRESS, FIRST SESSION,) FOR THE PROTEC-
TION OF FISHERIES ON THE ATLANTIC COAST.

THE MENHADEN FISHERY.

The bill, as proposed to be amended, was read, as follows :

[S. 227. Forty-ninth Congress, first session. In the Senate of the United States, December 9, 1885.]

Mr. SEWELL introduced the following bill, which was read twice and referred to the Committee on Fisheries :

A BILL for the protection of fisheries on the Atlantic coast.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall not be lawful for any person or persons, by day or night, to put, place, haul, draw, or in any manner use any purse-net, pound, fyke, weir, or other appliance for the capture of menhaden upon the high seas within [two] three miles of the Atlantic coast, or in any arm of the sea, river, haven, creek, basin, or bay along the said coast within the jurisdiction of the United States and not within the jurisdiction of any State.

SEC. 2. That it shall not be lawful for any person or persons, by day or night, to put, place, haul, draw, or in any manner use any purse-net, pound, fyke, weir, or other appliance upon the high seas within [two] three miles of the Atlantic coast, or in any arm of the sea, river, haven, creek, basin, or bay along the said coast within the jurisdiction of the United States and not within the jurisdiction of any State, for the capture of fish to be manufactured into oil or into fish-guano or other fertilizing material.

SEC. 3. That any person violating the provisions of this act shall, upon conviction thereof, be liable to a penalty of one thousand dollars, of which one-fourth shall be paid to the person upon whose information the said conviction shall be had, and the remainder shall be *paid into the Treasury of the United States*.

SEC. 4. That any steam or sailing boat or vessel of any description, and any net or nets, or other apparatus or tackling, which shall be used, or shall be *knowingly* hired or loaned for the purpose of being used, in any of the aforesaid waters, contrary to the true intent and meaning of this act, shall be forfeited to the United States; and it shall be the duty of the United States marshals of the districts bordering upon the said coasts to seize the said boats, vessels, nets, tackling, or other apparatus; and any marshal making such seizure shall report the same to the United States district court judge of the district bordering upon that portion of the sea upon which such seizure is made, or of the district within which such seizure is made; and the said judge, upon satisfactory evidence that the said boats, vessels, nets, tackling, or other apparatus have been used, or have been *knowingly* hired or loaned for the purpose of being used, contrary to the true intent and meaning of this act, shall condemn the same and direct their sale at public auction by the said marshal; and the proceeds of the said sale shall be devoted, first, to the payment of the costs and charges of the said proceedings, and the remainder, if there be any, shall be [appropriated to the uses of the United States Commission of Fish and Fisheries] *paid into the Treasury of the United States*.

SEC. 5. That any boat or vessel, net or nets, or other tackling or apparatus which shall be used, or which shall be *knowingly* loaned or hired *to be used* [for the purpose of being used] for any purpose contrary to the provisions of the first or second section of this act, shall be liable for the penalty imposed by the third section of this act, for which sum the said boat, vessel, net or nets, or other tackling or apparatus may be seized in port and proceeded against by way of libel in any district court of the United States having jurisdiction of the offense.

SEC. 6. *The provisions of this act shall not apply to the use of nets having meshes not less than nine inches.*

[The amendments proposed to be made are to strike out the words between brackets [] and to insert the words printed in *italics*.]

The CHAIRMAN (Senator PALMER). I suppose there are a number of interests to be heard. If there is no objection on the part of any member of the committee, we will first hear the fertilizing interest connected with the menhaden fisheries. I think Mr. de Ghequier and some others are here to represent that interest. Who will be your spokesman, gentlemen?

Mr. DE GHEQUIER. I am not, strictly speaking, representing the fish interest, but simply the fertilizers.

The CHAIRMAN. That is what we want to hear.

STATEMENT OF A de GHEQUIER.

Mr. A DE GHEQUIER (of Baltimore). I was at a meeting on Monday, in New York, which was attended very largely by parties from the South, the North, and the West, and at this meeting, by resolution of the members present, and afterwards by resolution of the board, the following memorial was decided upon to be presented to the Committee on Fisheries of the Senate.

Hon. THOMAS W. PALMER,

Chairman Committee on Fisheries, United States Senate, Washington, D. C. :

The National Fertilizer Association herewith begs to respectfully submit for your earnest consideration some of the reasons why Senate bill No. 227 should not be favorably reported upon and passed :

In the first place, it is not admitted that the operation of the menhaden fisheries caused any diminution of food fish along the New Jersey coast, nor that the bill will benefit any class of the community. For the menhaden, as is well known, is not, strictly speaking, a food-fish ; on the other hand, the industries directly or indirectly engaged in catching, preparing, and utilizing the menhaden and its products give employment to a far greater number of men dependent for the support of their families upon their present occupations than the total number of complaining or amateur fishermen along the Jersey coast can possibly amount to.

In the second place, if it is claimed that the catch of food-fish along the Jersey coast is growing less and less, a claim which is by no means supported by facts, it would seem the part of wisdom to seek for the cause of it in a scientific way by obtaining the opinion of experts, notably the United States Commission on Fish and Fisheries, and other fishermen of experience along the whole Atlantic coast, rather than to blame for it a branch of industry which appears to have no tangible connection with diminution of fish along the Jersey coast. Were we looking for causes for this alleged decrease in food-fish along the Jersey coast, we would have to consider the immense amount of sewage emptied by the cities of New York, Brooklyn, Jersey City, Hoboken, etc., into the very waters where the decrease of fish is claimed to occur, and for other causes unnecessary to mention here.

The fertilizer trade, though not further interested in the matter than to protect the vast agricultural interests of the country with which it is so closely connected, begs to submit other reasons still.

Fish-scrap in its various forms furnishes a most valuable material for supplying fertilizers with the requisite amount of ammonia, and the extent to which this is done may be inferred from the fact that large quantities are annually consumed by the trade and converted into fertilizers. The fertilizing properties of this menhaden scrap, through the operation of the soil, produce such an enormous food supply in wheat and corn (not to mention its influence upon cotton and tobacco) that it is in this connection, and in this alone, the menhaden should be considered a "food-fish."

The destruction of the menhaden fishery means not alone an increase in the cost of food in this country, but also a decrease in the quantity and value of all products of the soil. To withdraw this source of ammonia from the agriculturist would mean, therefore, to narrow down to that extent the supply of ammoniates, and under the laws of supply and demand, the price of other sources of ammonia would be enhanced to a degree that would compel the tillers of the soil to pay an increased price for fertilizers. It is not the manufacturers, but the farmer who requires fertilizers for the proper cultivation of his land and the raising of profitable crops, who would thus be taxed for the benefit of the promoters of this bill. Besides, since nature has supplied us with a source of ammonia on our coast, and immediately and cheaply available for agriculture, from the time of the Indian down to the present day, it would seem well to hesitate before striking down this industry and placing our farming community in a state of dependence upon the importation of fertilizing material from foreign countries. And it is this aspect which, in the opinion of our association, imparts to this subject the character of a serious question of political economy.

The association foregoes to call attention to the direct effect of the passage of the bill upon the menhaden fish industry, upon the vast amount of capital and labor thrown out of employment, etc., but feels confident that a full and fair consideration of the several facts laid before you in this memorial will induce you to pause before favorably indorsing a measure which in its ultimate effects would inflict an injury upon the people of the country, whom it is the province of prudent and wise legislation to protect and guard.

By order of the board of directors of the National Fertilizer Association, at a meeting held in the city of New York, February 8, 1886.

J. M. GLIDDEN,
(Of Boston,) *President.*

E. H. FROST,
(Of Charleston, S. C.) *Vice President.*

A. DE GHEQUIER,
(Of Baltimore,) *Secretary.*

The CHAIRMAN. Do you wish to say anything further?

Mr. DE GHEQUIER. I simply wish to say that there is only one available source of ammonia outside of this.

The CHAIRMAN. Are those ideas incorporated in these resolutions?

Mr. DE GHEQUIER. This memorial which I have just read, and of which the original is in your hands, embodies about all we wish to say.

The CHAIRMAN. All we want is the gist of the matter.

Mr. DE GHEQUIER. We should have to import ammonia from the other side if this source of supply is cut off.

Senator STANFORD. What extent of country is fertilized by this fish?

Mr. DE GHEQUIER. The annual production of fertilizers now reaches about a million of tons. Outside of this source of supply there are imported from England from 60,000 to 80,000 tons in addition.

The CHAIRMAN. Upon what area of country is that million tons used?

Mr. DE GHEQUIER. That is spread all over the country. The Western States are beginning to use it now. California begins to develop manufactories there.

The CHAIRMAN. What do you call the manure?

Mr. DE GHEQUIER. It is an ammoniac superphosphate. It is sold under various names. There are two classes of fertilizers; one is simply phosphoric acid, bones, etc., treated with sulphuric acid, and made available, and the other is this same acid phosphate, supplied with ammonia, either in its direct form or with nitrogen, and then the potash salts which are imported from the other side.

The CHAIRMAN. What is considered an average weight for an acre?

Mr. DE GHEQUIER. At present they apply in this country about 200 pounds to the acre as an average, but the farmers begin to learn now that if they apply more it is better. There are farmers in Maryland who raised this last year by the application of 600 pounds of fertilizers 62 bushels to the acre.

The CHAIRMAN. What is the market price per ton of this ammonia?

Mr. DE GHEQUIER. The market price varies according to the value of the ingredients. Of course fertilizers that analyze very high command a higher price in the market.

The CHAIRMAN. Give us the maximum and the minimum.

Mr. DE GHEQUIER. One fertilizer has been sold in the market for \$95 a ton. That was an imported one. The average fertilizer here analyzes about 8 per cent. of phosphate, 2 per cent. of ammonia, and from 1 to 2 per cent. of potash.

The CHAIRMAN. What is that worth?

Mr. DE GHEQUIER. That is worth from \$30 to \$36, cash price at the factory.

The CHAIRMAN. What is the minimum price?

Mr. DE GHEQUIER. Low-graded acid phosphates may be bought from \$14 upwards.

Senator SEWELL. How many tons of the fish product go into the fertilizer?

Mr. DE GHEQUIER. About 30,000 dried fish, and certainly not less than that of scrap of wet fish.

Senator SEWELL. Forty-five thousand tons is mixed with a million tons of fertilizer?

Mr. DE GHEQUIER. Rather constitute a portion of it.

Senator SEWELL. What is the price of that scrap?

Mr. DE GHEQUIER. The scrap is worth sometimes as high as \$2.50 to \$3. It is sold entirely by analysis.

Senator SEWELL. Is it not sold by the ton?

Mr. DE GHEQUIER. By the ton, but only on the analysis basis. For instance, the manufacturer contracts to buy 200 tons, and to pay so much per unit on that quantity.

Senator ALDRICH. What proportion of the ammonia which is used in your fertilizers comes from the fish product; can you tell? What proportion of the whole amount used, I mean? Can you give any idea of that?

Mr. DE GHEQUIER. Thirty thousand tons in a million.

Senator ALDRICH. What proportion of the ammonia comes from the fish product that you use? You buy ammonia in other forms, I suppose.

Mr. DE GHEQUIER. Yes.

Senator ALDRICH. What proportion of the amount you use comes from the fish product?

Mr. DE GHEQUIER. I should say 50 per cent. of it; fully 50 per cent., because outside of the ammonia the fish scrap contains, of course, always a certain amount of phosphate of lime.

Senator ALDRICH. You manufacture about 1,000,000 tons?

Mr. DE GHEQUIER. Of fertilizer.

Senator ALDRICH. So that 500,000 tons of that represent the fish product. That is, the ammonia for it is furnished from the fish product?

Mr. DE GHEQUIER. The ammonia for about 500,000 tons of that is furnished by the fish.

Senator DAWES. Is that confined to menhaden, or does it include other kinds of fish?

Mr. DE GHEQUIER. To my knowledge there are no other kinds of fish for the purpose; that is the only one that is used for oil in the first place, and the refuse afterwards is used for fish scrap.

Senator DAWES. In what locality is the menhaden taken mostly?

Mr. DE GHEQUIER. I believe the fishermen are more competent to

answer that than myself. We have them in the Chesapeake and along the Atlantic coast.

Senator DAWES. Do you know anything about the habits of the fish?

Mr. DE GHEQUIER. Except what I understand that the menhaden is very strange in its habits. Since they passed the law in Maine prohibiting the fishing of menhaden, it has not been seen on the coast of Maine. [Laughter.] It seems to have abandoned localities where it is not allowed to be caught.

STATEMENT OF JOSEPH WHARTON.

Mr. JOSEPH WHARTON (of Philadelphia). I own land in the State of New Jersey. Some of the land is very poor in the State of New Jersey. There are a few oases. The main difficulty in prosecuting agriculture there is to get anything to fertilize the soil with; and I was advised to put up a menhaden factory on the shore for that purpose, which I did. I have been engaged in that for many years. I am fully persuaded that the whole region of New Jersey from the central line, where they get marl, out to the sea, will be very much endangered by the stoppage of the menhaden catching. The whole Atlantic coast, as the gentleman who has just spoken has given us to understand, depends upon artificial fertilizers. The western soil does not need them to any great extent; but the whole Atlantic coast depends upon artificial fertilizers, and as you have just heard one-half of the whole amount of those artificial fertilizers depends on the menhaden scrap, and the menhaden scrap is just so much clear gratuity taken by man from the sea.

The sea is constantly robbing the earth, as everybody knows. Its fragments pass down into the rivers, and from the rivers into the sea; and whatever little quantity of that man can regain in any way is certainly fair gain—proper for him to do. He is taking back a little from the hungry and greedy sea that is constantly devouring everything. Of all the forms in which fertilizers can be taken from the sea, and there are several, the kelp, for instance, on the English and Irish coasts, and some few other forms of fish fertilizers, dog fish on the coast of Maine, for instance, there is nothing comparable to the menhaden fishery. I suppose that all the other forms in which anything useful to the soil is taken from the sea do not amount to one-hundredth part of that which is taken by the menhaden fishery from the sea for the improvement of the land; and to destroy the menhaden fishery, which this bill would virtually do, because it is really in the nature of breaking up the entire business, would be to deprive the entire Atlantic coast of one-half of the resources which it now has for fertilizing, and the whole of that one-half which would be robbed from the Atlantic coast would be just that which comes for nothing. It is not the result of anything that is grown upon the land, but it is doubling the land somewhere else for the benefit of that part of the land which requires fertilizers, and it is a clear gain from the sea just as if it was taken from the air—an absolute clear gain to the soil of one-half of the entire amount of the artificial fertilizers which the whole Atlantic coast requires. The robbing of the farms of the whole Atlantic coast of one-half of their artificial fertilizers is so serious a matter that I can not think that the committee can consider this bill favorably, if they get that fact fairly impressed upon their minds.

There is no other point in which the agriculture of the Atlantic coast could be so seriously injured as by the stoppage of the menhaden industry. The damage that would be done to the persons engaged per-

sonally in the industry will be spoken of, no doubt, by some of those who are engaged in the fishery, but that is of less importance, in my judgment, than the damage to the farmers.

I could say more, but there are other gentlemen here waiting to speak, and I think I had better give them the opportunity.

The CHAIRMAN. You speak of this bill affecting the destruction of the menhaden fishery. Do you know the habits of the menhaden?

Mr. WHARTON. I know them in a general way.

The CHAIRMAN. Or the character of the menhaden fishery? This merely applies to fishing within 3 miles of land. Are not menhaden caught outside of that line?

Mr. WHARTON. They certainly are, but to capture menhaden you must go where the menhaden are. The menhaden are not quite so obliging as the gentleman who just now spoke would have us believe. They will not accept the invitation of men, but you have to go for them where they are. The habit of the menhaden fishers, as you will learn from some of the other gentlemen, is to follow the fish wherever they are found. The habit of the fish is to come to the coast. Where they come from is not clearly known, but they come upon the coast of the United States. They reach the coast probably somewhere about South Carolina, but they are never caught down there. Then they gradually and slowly travel up along the coast at variable distances from the shore, until they get up to the coast of Maine, or even farther, and there they halt awhile and turn down southward and go along the coast again, and they are caught during that northward and southward migration principally.

The CHAIRMAN. Do you know where they are reproduced—where they spawn?

Mr. WHARTON. No; I do not think anybody knows that; I am not competent to answer it, at all events; but to answer directly the question which this merely leads up to, the fish are sometimes close to shore, sometimes very abundant in the bays even, and sometimes far out to sea. I suppose there were never as many menhaden seen in a mass as those which Professor Baird, the head of the Fish Commission, mentioned in one of his reports. He said he saw in a single school of these fish—he sailed through them in the *Fish Hawk* a great many days, and he saw more in that one mass of fish which were noticed outside of what is ordinarily considered the fishing limit—out in the open sea there were more in that one mass of fish by perhaps a hundred fold than all that have ever been caught by man since the fishing of menhaden was first invented. The multitude of them is beyond computation. It is only a small fraction that come along the coast, but to deprive the fishermen of the opportunity of catching fish within 3 miles of the shore would in a great many instances entirely destroy the day's work or the week's work. They have to catch the fish where they happen to find them, and to establish an arbitrary line within which the fish shall not be caught would interfere with the business, and make it unprofitable to that extent that it would be better to quit the business altogether. It is a precarious business, the profit of it is very slender, and anything that would tend seriously to diminish the little profit would simply destroy it. The experience of the fishermen for the last two years or more, I think, has been a general loss. They have lost money instead of gaining. Last year I think that was universal.

Senator DAWES. What is the interest that is benefited by the bill?

Mr. WHARTON. I think that is as the gentleman who has just spoken has expressed it, a matter of the amateur fisherman along the coast

more than anything else. People go from the cities to the seashore, and they like to go out in a little boat, cast a line over the side, and catch a fish or two. They take a little of Mrs. Winslow's soothing sirup along with them and get their noses red and their faces sunburnt, and they can do that without catching fish as well as with.

Senator DAWES. Is there any industry affected?

Mr. WHARTON. None.

Senator DAWES. Is any invested capital affected?

Mr. WHARTON. There is a very slight industry of catching fish by hook and line for the market, but that is really quite insignificant. The chief part of the food fish caught for market are not caught by hook and line.

Senator DAWES. These are not used for food directly?

Mr. WHARTON. They can be used. I have eaten menhaden and found them good, but they are too bony. One name of the menhaden is bony. They are thought to be too bony for food.

The industries that are supposed to be promoted by this bill I should like to hear some of the advocates of the bill speak for. I have not been able to discover any important interest or industry that desires the passage of the bill.

Senator SEWELL. You see no industry connected with the bill itself? Do you call the employment of several thousand people, who live on hook-and-line fishing and supply the market of New Jersey, no industry?

Mr. WHARTON. I should like first to be satisfied that there are several thousand Jersey men depending on the hook-and-line industry for their livelihood. I have been along the Jersey coast a great deal.

Senator SEWELL. From the Delaware to the Sandy Hook there are.

Mr. WHARTON. You may be better informed upon that, but I think it a matter of some doubt as to that coast. I should think a very few hundred would embrace the whole of them, and even many of those depend on other things. They only practice fishing for part of the year.

Senator SEWELL. How many men are employed in the menhaden fisheries in New Jersey?

Mr. WHARTON. I would rather refer that to some of the other gentlemen who are more competent to speak.

Senator ALDRICH. Do I understand you to admit that the catching of menhaden does interfere with these people at all, or is it a matter of fancy?

Mr. WHARTON. I do not believe it interferes with them in the least. I think that is altogether a notion and a fancy. I do not like to refer to a gentleman who is not present, Professor Baird; I wish he was here. One of the things he said was that the destruction of menhaden by other fish is so infinitely beyond anything man can do in the way of destroying menhaden that what man does is utterly insignificant. That I thoroughly believe.

STATEMENT OF E. G. BLACKFORD.

Mr. EUGENE G. BLACKFORD (of New York). Mr. Chairman, I do not appear here as a menhaden fisherman, or in the interest of menhaden fishermen at all, nor in the interest of any of the parties affected. As commissioner of fisheries of the State of New York I have paid considerable attention to all matters pertaining to fish, especially sea fish, and I had the honor of assisting the Senate committee a few years ago in its investigations along the coast in the vicinity of New York. At one time I became strongly imbued in favor of the necessity of legislation for the protection of the sea fisheries.

I thought that this enormous catch of fish that was taken every year by menhaden steamers and mackerel vessels would certainly tend to deplete the ocean of valuable food fishes; and some two years ago I, as a member of the American Fisheries Society, meeting here in Washington annually, was asked to prepare a paper, and I started to prepare a paper in favor of legislation for the protection of sea fisheries. Not being much of a writer or speaker, it was a matter of considerable labor for me, and I went to work to get together my facts from my own diaries that I kept of the daily supplies of the markets, and of the prices and notes that I take of the large catches, in order to prepare this paper to be read; but when I got my material all together I found the facts were entirely opposite to the views which I had entertained, and the more I looked into the subject the more I became impressed that there was no necessity for legislation for the protection of any of the free-swimming ocean sea fishes.

I mention that particularly because I do not wish to be understood as not favoring protection of the fish that go into the fresh waters to spawn; but as to fish that spawn upon the ocean and do not go into rivers and streams to spawn I believe nature has provided for such an immense amount of reproduction that men can not, with all the million contrivances for catching fish, have any appreciable effect upon the total amount of fish in the sea. This view, as I said, I came to from examining into the facts, although I had started in favor of protective legislation, and I think that you yourselves, if you would give this matter careful investigation of the statistics that may be attainable with regard to, for instance, the mackerel fishery, of which we have figures going back a hundred years or more, and for codfish and other sea fishes, will find that notwithstanding the immense catch and large consumption of these fish, both for food and for other purposes, these same fish in our markets to-day are just as plenty and just as cheap, and I think somewhat cheaper because of the increased facilities for catching them.

I have understood that there has been a bill already reported to the House of Representatives restricting the catch of mackerel. Gentlemen in its favor argue, I suppose, on the same basis that they do for the restriction of the catch of menhaden, that it has a tendency to impair the quantity or quality of the supply for food. With regard to that particular fishery let me give you just one instance, a year ago, if it is not foreign to the subject to speak of the mackerel.

The CHAIRMAN. No, sir.

Mr. BLACKFORD. About the 1st of April the mackerel fleet struck an immense school of fresh mackerel, and they all loaded up and came into New York, and there was at one time upwards of 15,000,000 mackerel lying around the wharves in the vicinity of Fulton Market. Those mackerel were unloaded there just as fast as possible. Men, women, and children came from all parts of the city with baskets, and the wagons of licensed venders, and there was no question about the price. They gave a basketful for 5 or 10 cents, and would load a man's wagon for 25 cents. For the space of two or three weeks the poorer classes had the benefit of this immense catch of mackerel. They were distributed all through the city. Of course it was the means of a large class of people making money; not myself, although I am in the fish business. This glut of fish interfered with my business, so to speak, but for the people generally it was a great blessing, especially for the poorer class.

That single fact of itself in regard to the mackerel fishery is conclusive. That fishery has been prosecuted with all the perseverance

and ingenuity and enterprise that the fishermen of our coast are capable of for one hundred years, and yet there is this enormous take, which goes to prove that man as a factor is of no account in depleting the waters of the ocean.

The CHAIRMAN. Permit me to interrupt you. What was the reason of their giving away that immense amount of mackerel; could they not have been salted?

Mr. BLACKFORD. A large portion of those were salted, but at that season of the year the mackerel are inferior in fatness, the quality is not of the kind that makes them most desirable for salting, but a very large portion of that catch was salted and sold salted at a very low price, sold in the salted state for from \$2.50 to \$4 per barrel. I should like very much to read a short paper I wrote in connection with this, to have it incorporated into your minutes as my views with regard to it. It will take about seven or eight minutes to read.

The CHAIRMAN. Can you submit it and have it incorporated just as well?

Senator DAWES. Have you several copies?

Mr. BLACKFORD. I have copies of it. I can send you some.

Senator DAWES. Suppose you send each member of the committee one.

Mr. BLACKFORD. I will do so.

Senator SEWELL. You have said to the committee that you do not think fishing for menhaden depletes the food fish along the coast. Are your remarks principally directed to deep-sea fishing?

Mr. BLACKFORD. Yes, sir; that is, to what are called free swimmers, the free ocean fish.

Senator SEWELL. Has not the take of fish on the New Jersey inland waters been very much decreased in the last few years?

Mr. BLACKFORD. I can not say that it has from my observation.

Senator SEWELL. The people engaged in the menhaden fishery deny ever taking any food fishes. My recollection is that when you spoke before a committee of the Senate a few years ago you gave an account of some very large diminution of food fishes by the menhaden fishermen and selling them in the Fulton Market.

Mr. BLACKFORD. That is a fact. They did make very large catches of weakfish, and they steamed direct to Fulton Market, and we had just such a time of cheap fish in New York as I have before described, owing to that catch.

Senator SEWELL. Is it not customary for them to take anything within their reach?

Mr. BLACKFORD. I can not say from actual observation. From facts coming under my own observation in connection with the marketing of fish, I know that should they be able to catch large schools of bluefish, weakfish, Spanish mackerel, or any of the other valuable food fishes, it would pay them very much better to bring them to Fulton Market and sell them for food than it would to take them to the factories; it would bring them more money, and consequently their interest would be to market them. I know it has been alleged that they do catch a very large amount of food fish which is turned into oil and scrap, *but so far as my knowledge goes*, and I meet a great many of the fishermen and others connected with it, I have never found anything to confirm the idea or to prove that they did catch any considerable number of food fishes and use them for oil or scrap.

Senator SEWELL. Do you know anything about the proportion of fish that is caught within the proposed 3-mile limit of the coast, or do you confine your statement to the outside?

Mr. BLACKFORD. With regard to the catching of menhaden, I do not. I am not sufficiently well informed in the practical workings of menhaden fisheries to say whether the 3-mile limit would prohibit and destroy their fishery or not. There are others, of course, who are more familiar.

Senator SEWELL. Have you any knowledge of the habits of the fish, so as to be able to give the committee an idea of whether the hauling of these purse nets on the bottom of the shore within the 3-mile limit is or is not destructive of the feeding grounds of the fish? Take the sheepshead, for instance. They have a certain feeding ground. If you haul a deep net over it, dragging the ground, does it not interfere with them?

Mr. BLACKFORD. If I understand the method of the menhaden fishermen rightly, they do not really scrape the ground; they have a leaded line which goes to the bottom of the seine to keep the seine extended down, but I do not think they ever scrape the bottom of the sea.

Senator SEWELL. That depends altogether on the depth of the water where they are hauling.

Mr. BLACKFORD. Of course the sheepshead feed on muscles and small crustacea. For two years I made a series of investigations into the food of our principal food fishes, what they went for. For instance, they strike the bass and the bluefish. I employed a man to take a certain number of fish out of the market every day, open their stomachs, and examine them, and the only fish we have found who feed to any extent upon the menhaden are bluefish and striped bass, and the striped bass, particularly on the coast of North Carolina, seem to have a larger proportion of menhaden in them than the bass that we get farther east. It was rarely, if ever, we got menhaden out of the stomach of striped bass that was caught north of Sandy Hook.

Senator DAWES. You say you are a dealer in fish?

Mr. BLACKFORD. Yes, sir.

Senator DAWES. Do you deal in menhaden?

Mr. BLACKFORD. No, sir; not at all.

Senator DAWES. You deal in food fish?

Mr. BLACKFORD. In food fish.

Senator DAWES. So that anything that tends to furnish to you food fish cheaply would be for your interest, would it not?

Mr. BLACKFORD. Yes, sir.

Senator DAWES. If the taking of menhaden destroyed, directly or indirectly, the supply of food fish for you it would be against your interest, would it not?

Mr. BLACKFORD. Entirely so, sir. Anything that tends to make any of our food fishes scarce is an injury to my personal business.

Senator DAWES. What is the official position which you hold?

Mr. BLACKFORD. Commissioner of fisheries for the State of New York. I am one of four commissioners.

Senator DAWES. How long have you held that position?

Mr. BLACKFORD. Seven years.

Senator STANFORD. Are the pastures of the menhaden in the open ocean?

Mr. BLACKFORD. I should suppose that most of their food was found on the ocean, not particularly confined to the shores, but extending out probably to a considerable distance. So far as our investigations have proved the matter, we find that they feed upon minute jelly fish. They do not seem to eat anything of any size. We find a little, small, black

crustacea occasionally in their stomachs, but their principal food appears to be a small jelly fish, which sometimes will cover the water of the ocean for miles.

Senator STANFORD. Where do they spawn?

Mr. BLACKFORD. That is a fact which has never been demonstrated beyond question; we only arrive at it by inference. I think I testified before the Senate committee when it met in the vicinity of New York to the fact of finding small menhaden, about three-fourths of an inch to an inch long, in the waters of the Great South Bay. I think they were taken in the latter part of June. I should judge from the knowledge of the growth of fishes, they might possibly have been from six weeks to two months old, showing that the fish might have spawned in the month of May. They certainly must have spawned in that vicinity, for the young fish could not have traveled any great distance. Still, at the same time, the number of fish found is so small in comparison with what we ought to find when we know their spawning beds, that it does not prove the habits of the fish entirely. The finding of these young menhaden was an exceptional circumstance, and went to prove that they had been spawned within six weeks or two months in the vicinity of the waters of the Great South Bay on the south side of Long Island.

Senator STANFORD. You really have no evidence whether they spawn in deep or shallow water?

Mr. BLACKFORD. No, sir; we have not.

Senator DAWES. State that again.

Mr. BLACKFORD. As a rule, we do not know, we have no positive evidence, as to their general habit of spawning. The circumstance which I spoke of was an exceptional one of finding these young menhaden.

Senator DAWES. I understood Senator Stanford to inquire whether you were satisfied that they spawned in deep or shallow water.

Mr. BLACKFORD. We are not satisfied as to which they do spawn in, whether it is in deep or shallow water.

The CHAIRMAN. You speak of ocean-spawning fish?

Mr. BLACKFORD. Yes, sir.

The CHAIRMAN. What is the other distinction that you apply?

Mr. BLACKFORD. What are termed anadromous fish, fish that run up into the rivers from the ocean and find fresh water, where they spawn; for example, the shad and the salmon are the most notable examples of that kind, and the smelt also.

The CHAIRMAN. What are the ocean-spawning fish?

Mr. BLACKFORD. Codfish, bluefish, and eels are ocean spawners to a large extent.

The CHAIRMAN. By that do you mean that they spawn along the shores or out at sea?

Mr. BLACKFORD. There is no doubt that a very large number spawn at sea, in fact that the bulk of them spawn in the ocean and not along the shore.

The CHAIRMAN. You also said that from the character of facts which had come to your knowledge you were satisfied that all the fishing done by men did not affect the supply.

Mr. BLACKFORD. Of these particular fish known as ocean-spawning fish.

The CHAIRMAN. Does that apply to all fish?

Mr. BLACKFORD. All fish that are termed ocean-spawning fish, menhaden, bluefish, striped bass, and codfish particularly.

Senator STANFORD. The pasture ground of the fish that run up the rivers is limited.

Mr. BLACKFORD. Ocean fish, when coming into rivers to spawn, very seldom feed after getting a short distance up the river. For instance, a salmon when it enters a river has its stomach full and distended with food, and as it gets nearer to the spawning bed it becomes more and more cleaned out, and finally when you open a salmon that has arrived at the spawning bed you find the stomach entirely empty—no food at all.

The CHAIRMAN. How would this bill affect the interest of those men who follow fishing for a livelihood?

Mr. BLACKFORD. You mean the food fishermen, the men who fish for food fish for a living?

The CHAIRMAN. Yes.

Mr. BLACKFORD. From my own observation I can not see that the menhaden fishermen have affected the supply of food fish on our coast. I do not know but that the circumstance has already been stated to the committee—it is a matter which has been published by the United States Fish Commission—that in 1764 the bluefish disappeared entirely from our coast and were gone for several years. That was previous to any menhaden fishing or the catching of fish on any extensive scale, whether mackerel, menhaden, or others. The habits of sea fishes are governed by certain natural laws; there is no doubt that they are not influenced by man and can not be calculated upon, and their movements are erratic according to those unknown laws. For instance, bluefish a year ago this last summer were wonderfully abundant all along the Jersey coast; our market was glutted with them, and the price went down to 2 cents a pound. If they had not been taken off the market and refrigerated they would have sold for a cent a pound. They were very abundant. Last summer, on the contrary, they were very scarce, but the fishermen all reported that the bluefish were very abundant away off shore, but they would not take the hook and line, and they were off under such circumstances in deep water that the men could not use the nets. So the bluefish were not scarce last summer to the fishermen along the coast, because the fish itself was scarce, but because they did not go into the shore. They were all off at sea.

Senator DAWES. Could that be attributed to the fact that the fishermen had taken their food off in the shape of menhaden?

Mr. BLACKFORD. No, sir; for the very reason that the year before this the menhaden fishermen were prosecuting their industry with the same perseverance that they have for the last ten years and the bluefish were plenty the year before.

Senator DAWES. Is this law of the fish that you do not quite understand what makes the change of fishing grounds?

Mr. BLACKFORD. There are certain conditions probably of temperature more than anything else—the temperature of the water—that govern the movements of these large schools of fish. We have already ascertained that the temperature does affect the movements of shad. A few degrees rise in the temperature will bring the shad in larger quantities, and a few degrees fall of temperature will stop them. We think there is no doubt that more or less applies to all fishes, but still we have not facts to prove it in regard to them as we have in regard to shad.

Senator DAWES. Allow me to make an inquiry in reference to this bill; you know so much about fishes and I so little. This bill confines its operations to within 3 miles of the coast, and also within portions of the 3 miles that are not within the jurisdiction of any State. If the prohibition is within 3 miles and still it is only in such portions of the 3

miles as are not within the jurisdiction of any State, can you tell me what that would affect? What portion of the 3 miles bordering on any State is outside of the concurrent jurisdiction of the State and the United States?

Mr. BLACKFORD. As I understand it, for instance you take a very large open bay on the coast. If a line is drawn from the headland here to the headland there [illustrating], inside of that line is within the jurisdiction of the State, while outside of that line to the extent of 3 miles is under the jurisdiction of the United States.

Senator DAWES. Can you think of any other application of it?

Mr. BLACKFORD. That is the only one I recall at the present time. So far as this provision would affect the menhaden fishermen, to destroy or remove their fishery beyond the 3-mile limit, I am not qualified to speak practically. That is a matter on which they can inform you better than I can.

Mr. D. T. CHURCH. Mr. Blackford, I wish you to state something about the spawning of the menhaden. What was the tendency of the evidence that you found in relation to the spawning? Do they not spawn late in the fall?

Mr. BLACKFORD. So far as I can recollect, without having the notes before me, we found the fish largest with spawn along in October and November. The fish that were caught early seemed to be entirely stripped as though they had just recovered from the act of spawning. The fish that were caught very late had all of the appearance of approaching ripeness. We never yet have had any menhaden that showed the spawn actually ready for spawning, but later in the season, and I think it was in the latter part of October or possibly the first of November, we found the specimens of menhaden that were sent to us very large with spawn. We had some sent to us from eastern waters in the vicinity of Rhode Island or Massachusetts that showed that, and we also had some from the coast of North Carolina that showed the same indications of the approach of the spawning season.

Senator DAWES. That was in the fall?

Mr. BLACKFORD. Very late in the fall.

Senator DAWES. Do you infer from that that they spawn in the winter.

Mr. BLACKFORD. No, sir. I think possibly that the fish spawn very early in the spring.

Mr. DE GHEQUIER. They are in that condition when they are going south.

Mr. BLACKFORD. They are in that condition when heading south. I am not entirely convinced that all these schools of fish that we speak of coming along the coast from south to north and then turning and going back actually do so. I think large numbers of fish that we think do that go off into deeper water. We know that shad do not go south. We know that shad lie off in the ocean close to the mouths of rivers.

Senator DAWES. Do you infer from the condition of these fish that they are seeking in the fall their spawning home?

Mr. BLACKFORD. Yes, sir; I do. That would be the natural inference from what we know of the habits of the spawning fish; that when a fish is so large with spawn, whatever direction it may be heading, then, of course, it must be towards the grounds where its instincts take it for the reproductive process.

Senator DAWES. And they are never headed inshore in that condition?

Mr. BLACKFORD. That I am not qualified to speak of, not having seen the fish.

The paper referred to by Mr. Blackford is as follows:

Is legislation necessary for the protection of the ocean fisheries?

[By Eugene G. Blackford, Commissioner of Fisheries, State of New York.]

One of the questions that frequently perplexes the mind of the fish culturist and the legislator is, how to protect in the best manner the valuable food fisheries of the seacoast and ocean.

On the one hand, there are the market fishermen, who use sailing vessels and work either in the deep outside waters, or, with net and hook, gather their prey along the shores and in the bays of our coast. This industry gives employment to over eighty-five thousand men and a capital of over \$30,000,000.

On the other hand, we have the large fleet of steamers that patrol the ocean catching the menhaden, and from them manufacture oil and fertilizers, an occupation involving nearly \$3,000,000 and giving employment to over two thousand men. These facts give some idea of the magnitude of the interests involved and of the importance of the question under discussion.

For the last five years a large number of the former class of fishermen have claimed that the steamers seriously affected their business, stating that many kinds of fish that were formerly abundant are now scarce, and that, unless laws are passed prohibiting the menhaden steamers from fishing within 3 miles of the shore, or in some way restricting their operations, many kinds of the valuable fishes will be exterminated or driven from our shores. In pursuance of this idea they have petitioned both State and national legislatures to that effect.

The question has been largely discussed by the press, the State and National fish commissions, and in the United States Senate. The latter has appointed a Committee on Fisheries, with Hon. E. G. Lapham as chairman. This committee has for the past two years taken the testimony of all classes of fishermen, and obtained the views and theories of fish culturists and ichthyologists. And, in addition to this, we have the valuable information and statistics gathered with great care by Prof. S. F. Baird, the eminent Commissioner of Fish and Fisheries of the United States.

It has been my privilege to assist in obtaining information on the subject for the Senate committee, the United States Fish Commission, and the New York State fishery commission, and I have read with great interest all of the evidence that has been taken by them bearing on this subject. And now, in discussing the question as to the advisability of any legislation to protect the ocean or sea fisheries, it is best to look over the facts which have thus far been brought out and see what would be the best way to provide for the continuance of the abundant supply that we now enjoy.

The first thing that we want to ascertain is whether what we know as salt-water fish, are scarcer now than in former times, and I would say here, that the absence of statistics covering any considerable space of time makes an answer to this question somewhat difficult, but, thanks to the New York Fishmongers' Association, and to the Boston fish bureau, a beginning has been made to supply this hiatus, and it is hoped that the National Government will very soon take definite measures for the purpose of getting, annually, correct statistics of the amount of fish caught in the waters and on the coast of the United States. Having been a dealer in fresh fish in Fulton Market, New York, for the past seventeen years, I have had the opportunity of noticing during this period the varying supply of various kinds of fish, and I beg leave to submit my views as to the scarcity or plentifulness of these various species.

First and most important of all our fishes is the cod. I believe that there has been no considerable diminution in quantity in the last decade, judging from the quantity brought to market and the prices obtained; and as some indication of the range of price, I may say that during the year 1883 cod sold as low as \$1 per hundred weight. In some years there has been a perceptible decrease in the catch, but it has been followed by such enormous catches that the markets have been glutted. The statistics of the Boston fish bureau show the catch of the New England fleet to be: For 1881, 775,027 quintals; for 1882, 898,904 quintals; for 1883, 1,061,698 quintals, showing an absolute increase in two years of nearly 300,000 quintals. Surely these figures need not occasion any alarm or fear that codfish cakes will be beyond the reach of the most impecunious fish culturist.

Next, and hardly second in importance, is the bluefish. It is a matter of historical record that these fish disappeared entirely from our coast in the year 1764, and did not make their appearance again for several years, and then they were taken in vast numbers. Suppose such a disappearance should take place this summer. How quickly the fishermen would appeal to the legislatures to abolish the menhaden steamers, and the angler would cry out for the destruction of the pound and trap nets. Each would probably claim that the scarcity was owing to these instrumen-

talities. This one instance of the bluefish in 1764 should lead us to be careful and conservative in regard to legislation, and to carefully consider whether there are not some great natural laws that determine the appearance and disappearance of fish on our coast, rather than attribute it to the comparatively puny efforts of man to affect the supply.

But let us turn to the question as to their present apparent scarcity or plentifulness. During the year 1882 bluefish were scarcer than they had been for some years, and the wholesale price did not go below 5 cents. This scarcity was particularly noticeable on the New Jersey coast. But the season of 1883 was unusually productive, and bluefish sold as low as $2\frac{1}{2}$ cents per pound, and, had it not been for the large quantities that were taken out of the market and stored in refrigerators for winter use, the price would have declined to 1 cent per pound.

It would seem to be a fair inference that the bluefish needs no protection at present.

The fresh mackerel is another important factor in the food supply of the people. It has attracted a great deal of the attention of fish economists, and it is one of the fishes in regard to which, through the statistics of the Boston fish bureau, we can speak somewhat intelligently.

In 1825 the New England catch was 260,000 barrels; in 1826, 160,000 barrels; in 1827, 200,000 barrels; in 1828, 240,000 barrels, and in 1831, the largest quantity on record was taken, amounting to 390,000 barrels. After this wonderful catch the number steadily declined until the year 1840, during which season only 55,000 barrels were taken. In 1851 there was another wonderful catch of 330,000 barrels; in 1859, only 100,000 barrels; in 1863, 310,000 barrels; in 1868, 180,000 barrels; in 1870, 320,000 barrels; in 1877, 110,000 barrels; in 1880, 245,000 barrels; in 1881 and 1882 the number is the same, 260,000 barrels; in 1883, 160,000 barrels. These figures, covering a period of fifty-eight years, would seem to indicate that their plentifulness or scarcity is not governed materially by the purse seines of the Gloucester fleet.

In my own experience in the New York markets I have just seen such fluctuations in the quantities brought to that city, and whenever there occurs a bad season the fishermen and others interested talk of the probability of the mackerel being all caught up, and of the necessity of some protection for the mackerel fisheries.

The opening of the present season has been a remarkable one. The first vessel arrived March 24, and the mackerel were so small that the captain refused to take off his hatches to show the fish, and insisted on selling them "unsight unseen," and he was fortunate enough to find a purchaser on those terms at $2\frac{1}{2}$ cents each. There were something like 100,000 fish in the load, and they were so small that it took five of them to weigh a pound. The firm that bought them succeeded in selling a few hundred at 4 cents each, and then the price rapidly declined, until the larger portion of the cargo was sold at 50 cents per hundred. About that time the unfortunate buyer called my attention to the fact that it was a great shame that such small mackerel were caught, and that Congress ought to pass a law to prohibit such a wicked waste.

The first load of mackerel was followed by several loads with fish a very little larger in size, but about the 20th of April a new school made its appearance, the average weight of the fish being about 1 pound each, and at least 1,500,000 of this size have, up to the present time, been marketed, and a large portion of them have been sold as low as 2 cents each.

The porgy, or, as it is sometimes called, the scup, is another important fish that furnishes abundant and cheap food, and about which considerable controversy has been had during the past few years, between the net men on one side and the hook-and-line men on the other, the latter claiming that the pounds and traps of the former were exterminating these fish, and efforts were put forth to have laws enacted that should restrict or abolish pound and trap fishing. But nothing came of such endeavors. This was in 1871, and fishing has been carried on in the same manner ever since, and in the New York market last week porgies sold as low as 75 cents per barrel, or about one-half a cent per pound.

I might continue on through the list of food fishes, and occupy your time, and possibly your attention, but I think I have said enough on this branch of the question.

Now, let us consider the menhaden fisheries, against which is brought the charge that they are prosecuted to such an extent, by both sail and steam vessels, that they have materially decreased the numbers of menhaden and seriously impaired the catch of food fishes. You will find, by referring to the reports of the United States Menhaden Oil and Guano Association, that in 1875, with 283 sailing vessels and 25 steamers, 492,878,000 fish were taken; that in 1881, with 286 sailing vessels and 73 steamers, 454,192,000 fish were caught; and in 1882, with 83 steamers and 212 sailing vessels, only 346,638,000 were caught, and last year, 1883, with 136 sail and 69 steamers, there was the enormous catch of 613,461,000 fish. These figures, taken in connection with the statements that have been made to me by captains of merchant vessels, and fishing smacks, that during the fall of 1883 they sailed through miles of menhaden, would warrant the belief that this fish is very far from being exterminated, and that,

with them as with the food fishes that are taken for market, there are seasons of great abundance and seasons of scarcity, and that up to the present time these seasons have not been affected, either one way or the other, by human agency.

Another significant fact is, that during the early part of the menhaden season of 1883, and up to nearly its close, the fishing was so poor and unprofitable that the fishermen themselves began to think they had "killed the goose that laid the golden egg," when all at once the fish appeared in countless numbers, and in a few days they had taken enough to turn what had promised to be a most disastrous season into one of large profit to all concerned.

Now, having presented these facts to you in a crude and disjointed form, permit me to say, in closing, that although what are known as the hook-and-line fishermen, almost without exception, testify (and I believe truly) that they find their occupation and means of living seriously impaired; yet from my experience and observation in the markets, I believe the facts to be that, with the exception of striped bass and lobsters, all kinds of sea food fishes are as abundant now as they were fifteen years ago; and believing this, I am forced to the conviction that any legislation looking to the restriction of the fishing by the menhaden fishermen is unnecessary, and that any laws prohibiting pound and trap net fishing would cut off a large proportion of abundant and cheap food for the people, and nothing would be gained.

But I do hope that Congress will take some action that will provide for the collection of statistics as to the quantities of fish taken, so that in future, when questions affecting these vast industries come before them, they will then be able to frame legislation that will protect the fisheries and not oppress the fishermen.

Mr. ENDICOTT. I would like to ask Mr. Blackford to state whether in his opinion the pollution of the waters by gases and oils has a detrimental effect upon the fisheries.

Mr. BLACKFORD. That is a question which, I believe, received some attention at the last meeting of the association in the Cooper Institute, New York. On that occasion some action was taken, which looked towards a petition for legislation to prevent the pollution of the water. I think it was admitted by all that it had been a source of great detriment to the fishing in our bays, and especially in New York Harbor. I will quote from the report of the association for 1883, page 75:

"Mr. BENKARD. I would like to bring up the subject of the pollution of our waters, which brings many of our fish cultural efforts to naught. I would respectfully offer the following:

"Whereas it is the sense of this association that the continual and increasing pollution of the waters of New York Bay from the refuse of certain factories threatens eventually to kill or drive away all fish, shellfish, and bivalves natural to said waters: Therefore—

"*Be it resolved*, That this association beg to call the immediate attention of the fish commissioners of the States of New York and New Jersey, also of the members of their legislatures, to this impending calamity."

I seconded that resolution and made a few remarks to the effect that a great many fish, which had formerly been abundant in the bay, were no longer to be found there. Striped bass, and particularly lobsters, had been driven out entirely. These latter used to be taken abundantly on the Jersey flats. Shrimps, too, which were very numerous and formed food for larger fish, were almost exterminated, and what few remained were tainted with a flavor of kerosene. Oysters and clams have been killed by thousands in the vicinity of Rockaway. The water has been so polluted by the factories of Barren Island as to render a number of oyster beds, that used to be considered valuable, of no importance whatever. I think, though I am not certain, that the New Jersey legislature has taken some action, and I am of the decided opinion that if our association moved in the matter, legislation could be brought about which would be able to control this matter at least in our own State of New York.

MEMORIAL SUBMITTED BY J. BOOKER.

JOHN BOOKER (of Hampton, Va.). Mr. Chairman, I am charged with the duty of presenting to you the petition of James S. Darling, of Hampton, Va., who is engaged in the menhaden fishery. I will read it:

To the honorable members of the Senate and House of Representatives of the United States of America in Congress assembled:

The petition of James S. Darling respectfully represents that he is a citizen of the town of Hampton, county of Elizabeth City, State of Virginia; that he is at present, and has been for the last eight years, engaged in the taking and catching of the menhaden fish, for the purpose of manufacturing the same into oil and fish-guano; that

his place of business, consisting of factories, drying floors, storage houses, quarters for hands, boats, tackles, nets, etc., is located on a barren sand hill, never before used for any other purpose, at the mouth of Back River, on the Chesapeake Bay, in said county and state; that he has expended in and about the erection of said buildings and apparatus a large sum of money, to wit, the sum of \$45,000; that the said property is utterly useless for any other business or purpose than that for which it is now being used, and, if forced upon the market, your petitioner would hardly realize from the sales of the same the sum of \$1,000; in truth and in fact it would be almost worthless.

Your petitioner further sheweth that he employs in carrying on said business one hundred and sixty-five hands, all of whom have been trained to this business, and whose families are entirely dependent upon this enterprise for a livelihood.

Your petitioner further sheweth that he expends annually in cash, in the county of Elizabeth City, from \$40,000 to \$50,000, by which said expenditures many of the poorer classes are greatly benefited.

Your petitioner now shows that there is pending before the Senate of the United States a bill known as "Senate bill No. 227," having for its object the protection of fisheries on the Atlantic (a copy of which is herewith filed).

Your petitioner further shows that should said bill become a law, owing to the nature of said business, the same being always situated in isolated spots, that his said property would be entirely worthless; in fact and in truth the passage of such a bill would be virtually to confiscate the entire property of your petitioner, and leave him, after eight years of hard work, almost destitute; that one hundred and sixty-five citizens of his county will be thrown out of employment, who are entirely unfitted for any other occupation, and that women and children will be left in a destitute condition.

Your petitioner is advised that the passage of the said act, proposing, as it does, to legislate upon the subject of fisheries in waters lying within the jurisdiction of the States, is unconstitutional.

Wherefore your petitioner prays, first, that the said bill may not become a law. But should Congress, in its infinite wisdom, see fit to pass such a law, that they, at least, make provisions in said act for the payment of such property as would virtually, under the provisions of said bill, be confiscated.

And your petitioner will ever pray, etc.

J. S. DARLING.

Senator DAWES. Where does the petitioner reside?

Mr. BOOKER. He resides at Hampton, in the State of Virginia, on the Chesapeake Bay. There are a great many factories that come under that same head.

STATEMENT OF D. T. CHURCH.

D. T. CHURCH (of Tiverton, R. I.). Mr. Chairman, as I come here as the representative of the menhaden interest, I suppose I may now say a few words as to what we are capable of proving in relation to this question.

In the first place, we start with the statement that we are not in any sense an enemy to a food fisherman; that our taking of menhaden does not have any effect whatever on the fishing for food fishes, and there is not a particle of evidence to that effect and never has been. It never can be produced to show that we affect in any way the taking of food fish on this coast. We are prepared to prove that. We will take as an illustration any fish that you may mention on the southern coast of New England, whether it is a codfish, a mackerel, a bluefish, a tautog, or any other fish. We have the evidence, and can give it to you square and straight if you want it, for the evidence is within our reach.

Senator DAWES. Do you mean that none of these fish feed on the menhaden?

Mr. D. T. CHURCH. No; what I mean to say is this, in short, that the appearance and disappearance of fish, whether it is a menhaden, a scup, a codfish, a mackerel, or a bluefish, anything of that kind is from natural causes, and that man has nothing whatever to

do with it. We can give you information showing that there is no fish, whether the codfish, the mackerel, or any of the varieties I have mentioned, but what has come and gone within the last forty years, two or three times. We can produce evidence to show there are fish that have made their appearance and lived on this coast for years and then have disappeared entirely, and not one been seen for twenty years.

In connection with this I will call your attention to one fact, which I think should settle the whole affair. This question was under discussion some years ago, and the people on the New England coast and on the New Jersey coast and down in Virginia were very much stirred up about it. About 1870, Mr. Dawes, if I remember aright, was the man who, in connection with that controversy, introduced a measure here appointing the United States Fish Commission to investigate the subject. After mature investigation by a set of men appointed by the Government of the the United States to settle this question that has been agitating the country for the last fifteen or twenty or twenty-five years, it has been conclusively determined, and the figures given to show, that man is not an enemy to a salt-water fish. Take the bluefish, for instance; they destroy all food fish that they can. Mr. Baird says that the bluefish alone in one year destroy 150,000,000 tons of fish, and he gives that as a low estimate. The menhaden fishermen, by the figures, for the last ten or fifteen years have taken 200,000 tons a year of these fish, which is in the proportion of 1 fish in 750. Instead of going into any extended defense, we produce this one fact, that the United States Fish Commission, which the Government of the United States has spent two or three million dollars upon to settle this question, make the statement that as to destroying fish the bluefish alone destroy 750 where we destroy 1.

The CHAIRMAN. Is that statement in regard to the bluefish general, or does it merely apply to our coast?

Mr. D. T. CHURCH. It applies to our coast within Professor Baird's observation; it applies to the coast that he goes on. Now, take another fish, which is the scup in New England, to give you a short history, and give you the point of just where this argument comes. The scup by history of the country was coeval with the whites coming into New England, in Massachusetts and Rhode Island. Massasoit, the Indian, entertained the first white man the Indian met by feeding him on a scup or porgy. When your father and my father, the old standbys, came on deck there was not a scup known in our waters. Before the year 1800 they were gone before there was ever a trap or a purse net set in the United States or thought of. The scup disappeared from the waters of New England. When Thomas Jefferson was elected President in 1800 the scup again made their appearance and were called the Jefferson fish for that reason—Democratic fish, because they came in in the year 1800. From the year 1800 to 1867 everybody could catch just as many scup as he chose at any place in Narragansett Bay.

Senator DAWES. You mean up to 1861.

Mr. D. T. CHURCH. In 1867 it was when the scup disappeared again.

Senator DAWES. I thought it was when the Democratic party disappeared. (Laughter.)

Mr. D. T. CHURCH. The scup, as I say, by 1867, had begun to grow scarce. Before that time anybody could catch a scup where he saw fit. You could go to into Narragansett Bay, put your line and hook overboard, and catch plenty of them. In 1867 the scup began to grow scarce, and by 1870 they were gone. Then these came in and then

arose the contest which was the foundation of the United States Fish Commission. An application was made to the legislature of Rhode Island to pass a bill, and Spencer F. Baird was one of the parties who drew the provisions of the bill. It was confiscation without judge or jury. I was in the business then; had my gear; my means of livelihood was in the business. We went before the legislature to fight for bread and butter, and by a chance Mr. Stevens, who was a fisherman himself, was lieutenant-governor and presiding officer of the senate of Rhode Island, and he defeated that bill. We have the record that Spencer F. Baird says that if that bill had been passed in 1867 or 1868 or 1869, when they tried to pass it, all the tendency of legislation in the United States would have been exactly opposite from what it is to-day, for the reason that in 1870 free fishing was allowed—anybody was allowed to fish where he saw fit. The scup, from a product of 100,000 barrels, went down to a product of less than 1,000 barrels. People who had been fishing there for a lifetime could not catch scup in Narragansett Bay. After 1870 the scup came on again, and in 1874 there were more scup on the southern coast of New England than ever was known in the history of the business. There were over 100,000 barrels taken in one year. There were only 1,000 barrels taken in 1870, and in 1874 there were over 100,000 barrels taken in the vicinity of Newport, showing that by allowing the fish free access to the coast things come out right.

That illustration I could repeat over and over again as to other fish. I could give you the sea bass; I could give you the mackerel; I could give you the tautog; I could give you the very fish that Senator Sewell speaks of, the weakfish. For instance, the other day I went into a place in Boston where a man was down square on this thing. He took the ground that we were the enemies of the fish. We talked it all over for a little while. The man said: "Mr. Church, do you recollect that in 1870 the squeteague came onto our coast, which they had not done for thirty years?" When I was ten years old the men who were on the deck would catch a boat-load right in Narragansett Bay. It was a common thing to catch the squeteague or weakfish, but I never caught one in my life with hook and line in Narragansett Bay. In 1870 that bay was literally crammed with them; you could catch them by the hundreds of thousands of tons. They were so plentiful that they did not ship them to New York, because it would not pay to take them out of the water and put them in a box. We can take every fish of that kind on the southern coast of New England, and give you practical illustrations of it if you want them, but if you do not want them we will not give them.

The CHAIRMAN. Please state the conclusions you have formed.

Mr. D. T. CHURCH. The conclusion I have formed from observation is this: That the supply and plentifulness of fish is from natural causes which man knows nothing about.

The CHAIRMAN. Does that apply to all fish?

Mr. D. T. CHURCH. To every fish; for instance, we go into this fish question—take it as a matter of history. We go to Sweden or go to Norway; there they have a record of over fifteen hundred years of the fish business. We can go to work and show you that there is a city on the coast of Norway of over 10,000 inhabitants that made their livelihood from herring for over a hundred years. We can prove to you that every herring left that vicinity; that the city became depopulated, and they were gone for a hundred years and more before they came back, and when they came back they became just as plenty as they had been be-

fore they left. Man simply gives the fact. I can offer you evidence as to codfish. Men used to fish for cod on the southern coast of New England, but in 1860 or 1861 they went away, because there were no codfish. The codfish were gone, and gone forever apparently; but in 1878 the codfish came onto this coast in immense quantities, and you could catch as many codfish as you saw fit. A man in Rhode Island could go off Newport and catch a boat load of fish. A 12 foot boat could go out and you could fill it with codfish. That applied to all the waters from Cape Ann clear to the capes of the Delaware. In 1878 there were landed in the city of Philadelphia so many codfish that they sold for less than \$1 a hundred. I can produce hundreds of fishermen who did not go fishing because it did not pay to catch them.

In that connection I will make this statement to show just how that comes: The Rhode Island fish commissioner came before the Rhode Island legislature about that time, that very winter of 1878, with an ironclad law, making the statement that they were public enemies of Rhode Island; that they should be restricted and not allowed to catch fish. Then, as a climax to his statement, he said: "Gentlemen, there is no fish in Rhode Island waters; Rhode Island fishermen can not catch fish." When he got through, I said: "Gentlemen, to end this argument, I will agree under contract, and I will put down \$10,000 that I fulfill my contract, that I can produce within one month 100,000 pounds of codfish, every one caught in the waters of the State of Rhode Island, and every one shall be landed for 1 cent a pound in the city of Providence, if the gentleman will put up \$10,000 to the contrary." The gentleman walked out, and that ended the matter. I can give you all these points, and can give you illustrations and evidence in abundance if you want them.

Senator DAWES. What is your opinion as to the policy of the close season?

Mr. D. T. CHURCH. I do not think that is necessary, or, indeed any legislation. Of course, to a certain extent my testimony is interested, because I am a fisherman; but I can give you disinterested testimony—perhaps the highest authority in the world—the British commissioner, Thomas H. Huxley, a man high in the scientific world. He was put on the British commission in 1863, with direct instructions by the Parliament of Great Britain to go into an exhaustive examination of the question whether the fisheries of Great Britain would be destroyed by the improved methods of catching fish—the same question that we have here. The same arguments were used there then that are used here at present. For three years the investigation continued, and after asking sixty-three thousand questions he came before the Parliament of Great Britain, and with the commission unanimously agreed that there was no need of any legislation as to any fish that lived and spawned in the sea; and that is my judgment.

The CHAIRMAN. Have you that report?

Mr. D. T. CHURCH. Here it is.

Senator STANFORD. Have you observed that when one class of fish disappears another comes?

Mr. D. T. CHURCH. It is very apt to be that way.

Senator STANFORD. May not that account for the disappearance of a class of fish?

Mr. D. T. CHURCH. Take the Spanish mackerel; they were on the coast for twenty years, and when they left the bluefish came in. We were down in Maine in the menhaden fishery, and the legislature of that State passed a law against it, and the menhaden left. Of course

the law had nothing to do with it, but when the menhaden left a fish came in called the cayac, and there seemed to be as many fish of about the same species as plenty as the menhaden were on the Great George.

Senator SEWELL. Have you caught them?

Mr. D. T. CHURCH. No, sir; that is outside work there.

Senator SEWELL. The theory of this bill is based on protection within a certain distance of the shore for the hook-and-line fisheries. Why is it a special damage to your interest that we should protect them within 3 miles from shore and give you the rest of the ocean?

Mr. D. T. CHURCH. It amounts to the destruction of the business; there is evidence conclusive on that point from fishermen who know all about it. I know from my own observation that it would amount to the practical destruction of our products to the extent of about three-fourths or probably four-fifths of the fish.

Senator SEWELL. Do you mean that three-fourths of the fish are caught within the 3-mile line?

Mr. D. T. CHURCH. Yes, sir; more than that. This last year a school of porpoises came on to the coast and spread themselves from the capes of Virginia to Sandy Hook. It seemed as though the ocean was full of porpoises. Wherever porpoises are, other fish, no matter whether the menhaden, the bluefish, or fish of any other kind, get out of the way. The porpoises are the scavengers of the sea. The result was that the menhaden, regular fat sea menhaden, went into the Chesapeake Bay and located between the mouth of the Potomac and 40 miles above. That stretch of forty miles on the Potomac was the great place for the menhaden fishing last year, and they were never known there before. If we could not have fished within the 3-mile limit nobody would have had a chance to catch any of those fish, and all the Virginian fisheries would have been destroyed by such a law.

Senator DAWES. If you apply the 3-mile limit to the coast that you know of, and then exclude from the 3 mile limit that of which the States have jurisdiction, what is left?

Mr. D. T. CHURCH. There is not anything left. The United States gives us a license to fish, and that license extends anywhere on tide-water. The law says that coasting vessels and fishing vessels shall have a license; the original law of 1790, I think, was drawn so that we have a right under the license to fish wherever we can.

Senator DAWES. How far does the jurisdiction of the State extend?

Mr. D. T. CHURCH. It does not extend anywhere on the tide-water, so far as fishing is concerned.

Senator DAWES. Not within the 3-mile limit?

Mr. D. T. CHURCH. The United States has full control anywhere where a vessel can float, in any bay, river, or inlet.

Senator ALDRICH. If this bill should pass, and you should be excluded from fishing within 3 miles of the shore, as it proposes, would it be possible or profitable for you to carry on your business?

Mr. D. T. CHURCH. No; it would amount to an annihilation of the business.

Senator SEWELL. You say the State has no right in the matter. Did not the State of Maine pass a law prohibiting this fishing within her borders, and has she not carried it out?

Mr. D. T. CHURCH. It has always been a cloudy line where they run together, but we have always taken the ground, and always won it, that the United States controls the matter. The State did pass such a law, but it is something the State has never been able to enforce.

ARGUMENT OF HENRY A. REEVES (OF GREENPORT, N. Y.).

Mr. REEVES. Mr. Chairman and gentlemen, I know very well that your time is too valuable to be spent in idle or irrelevant discussion, and, therefore, with a view to economy of time by avoidance of mere digression or dispute in the heat of debate, I have committed to paper what I desire to say to you upon the pending bill. I shall hope thereby to make my argument more direct and more compact, if not more impressive.

A single word personal to myself may be a proper preliminary. I am not a lawyer nor a paid attorney or advocate of the interest which, with my associates, I represent before you. Of course there would be nothing improper in being such an attorney, but it is best to be frank in such matters, and I wish it understood that in coming to this hearing I am moved simply by regard to the welfare of the community in which I live—a community very seriously, I may say vitally, affected by the bill under consideration.

Mr. Chairman, I address your committee on behalf of the menhaden fishery, against which a fatal blow is aimed by this bill. Because under it many hundreds, nay thousands, of worthy citizens, resident in greater or lesser numbers along the coast of all the Atlantic States from Maine to the Carolinas, are threatened with loss of immediate employment and the total destruction of their present industrial pursuits, I respectfully ask that you give to this case the attention which its actual importance deserves.

The bill before you, Senate bill No. 227, introduced on December 9, 1885, by Mr. Sewell, has for its nominal object, as expressed in the title, "protection of fisheries on the Atlantic coast." On a careful reading I find that it is wholly taken up with provisions for regulating one particular branch of the sea coast fisheries, and with imposition of penalties sufficiently severe to secure observance of such provisions; and on a still more careful consideration of the import and effect of those provisions I am forced to the conclusion that the bill, whatever its intent, does practically work destruction of the menhaden fishery. A few words may serve to set forth this latter fact so plainly that you will readily see and appreciate its full force.

To take menhaden in quantities available or profitable for use at factories, purse-nets are indispensable; no other means of catching them in either shoal or deep water exists. A prohibition on such nets is an embargo on the business. The fish are migratory, coming northward in early spring and going southward in late fall, inside the Gulf Stream, and apparently moving as the temperature of the water varies. An instinct of food seeking or of spawning brings them toward the coast and keeps them scattered in masses near the land or inside the bays, sounds, harbors, and estuaries indenting the shore from Maine to Florida during the period of their stay. While vast schools and numberless smaller bodies may sometimes be seen over many hundreds of miles within a distance of 1 or 2 miles from shore, it is rare to see any considerable number or large body further from land than this distance of 1 to 2 miles. The great bulk, fully nine-tenths or more, of these fish annually rendered at factories are caught in purse-nets, either inside of headlands or in the open ocean within a mile from shore. No factory does, or ever did, get enough fish taken in the outer ocean over a mile from shore to keep it running for a week. Hence, to stop the use of purse-nets within 2 miles from shore means the absolute closure of the busi-

ness as now carried on by either steam or sailing vessels. Only a few open areas resorted to by the fish, such as the middle part of Long Island Sound, the space between Block Island and Montauk Point, [the wider part of Chesapeake Bay], the wider parts of the Carolina Sounds, etc., would be left available for the fishery, and even if it were practicable for vessels while fishing to recognize and respect the 2 mile limit, it would be utterly futile to try to get in such limited spaces fish enough to make the business pay expenses.

It is therefore the language of soberness and truth to say that the passage of the bill would compel the immediate stoppage of the menhaden fishery—an industry which takes out of the teeming sea a material otherwise waste and valueless and from it makes articles so useful to mankind that their yearly production brings a cash return of millions of dollars. This direct and inevitable effect of the bill should be kept clearly in view. It does not propose mere restriction or useful regulation—it destroys and annihilates. Under it the factories would necessarily close; the capital invested to the amount of \$1,500,000 or more, in buildings, machinery, steamers, boats, nets, and other gear, which would have little or no value for other uses, would be practically confiscated, and the thousands of good citizens either directly employed in the fishery and at the factories, or engaged in other lines of dependent industries, would be deprived of occupation in which they now earn honest livelihoods for themselves and their families.

This is not rhetorical exaggeration; it is not the plea of an advocate amplifying his case for effect; it is a simple, truthful, exact statement of the certain results attendant upon the passage of this bill. Such being the case, the question naturally arises, Why is such destructive legislation proposed? What necessity exists to warrant it? What reason can be given for striking out of existence so important, so useful, and so deserving an industry? Surely, there ought to be a real and commanding necessity in order to justify such an extreme exercise of legislative power. And if there be such a necessity it must needs be susceptible of proof. It must be tangible and real—something which can be measured and weighed in the scales of common sense and fair reason. What evidence that such a necessity exists has ever been or can be produced? I doubt not the good faith or sincerity of those who inspired or who favor this bill, but I believe them to be laboring under illusions which prevent their seeing either the full scope of their own measure or the weakness of the support on which it rests. I invite them to make public the definite grounds of their demand that the menhaden fishery be destroyed; and I respectfully insist that every member of Congress, before he gives his vote to the destruction of any legitimate industry, owes it as a solemn duty to himself and to his constituents, whether directly affected by the bill or not, to be sure that a necessity does exist so great and controlling as to justify such a step.

So far as I have been able to discover, after attentive consideration of this subject for years, there are but two allegations advanced by the opponents of the menhaden fishery to sustain their claim that it ought to be legislated out of existence. This bill, therefore, may fairly be supposed to stand on one or other, or both, of these allegations, which I hope to show you are merely allegations, unsupported by adequate proof. The bill assumes that to destroy the menhaden fishery would afford "protection" to other "fisheries on the Atlantic coast" This could only be possible in one of two ways, which answer to the two central ideas of the allegations referred to.

(1) It is alleged that the taking of menhaden with purse nets involves

the capture or destruction of food fish to an extent which warrants legislative prohibition of the use of such nets. I answer that no single instance has ever been shown of any considerable number of food fish being caught in a purse net, except a few large hauls of chequets or weakfish, which were mistaken by the fishermen for menhaden and were, whenever practicable, carried to the nearest market. Only a few such cases—less than half a dozen in a series of twenty or thirty years—have ever happened; but, even if it had been a frequent occurrence, its effect on the supply of weakfish has not been perceptible, and so far as these fish are concerned no complaint ever fell under my eye. The other surface sea fish which are supposed to feed upon menhaden to any considerable extent, are bluefish, bonitos, Spanish mackerel, pollock, and striped bass. Of these five varieties of edible fish, I confidently assert that there never were any large number taken in purse nets. Certainly, there will be no dispute of this assertion as respects bonitos, Spanish mackerel, pollock, and striped bass. I greatly doubt if five thousand of either or all those fish were ever taken in these nets since their use began in 1852.

The unvarying testimony of the officers and crews of the vessels, both sail and steam, employed in the menhaden fishery is that they do not take enough edible fish of all kinds to supply their own table, and this is not due to indifference or inattention, for the menhaden, as they are dumped into the vessel's hold, are carefully watched, and all eatable fish are picked out. In the volume of such testimony taken before the Senate committee in 1882 this fact is made clearly apparent. Every officer or fisherman examined swore to substantially the same thing—that, with the few exceptions as to weakfish, they had never known any considerable number of edible fish to be taken in purse nets. These men are honest and truthful; I can personally avouch the same general truth. For nearly thirty years I have resided at Greenport, where the menhaden fishery is carried on to a greater extent than at any other port in the State of New York, and, while I have never had a penny of interest in the business, I have been a close observer of its various phases, and I have conversed with hundreds of men engaged in the fishery, questioning them when there could be no possible suspicion of interest to bias their answers, and they have invariably told me that, with the exceptions noted, they had never known any considerable quantity of edible fish to be taken in purse nets.

This testimony extends to the bluefish, the only edible variety about which there could possibly be or has ever been any serious contention. These fish are ravenous, swift, and wide ranging; they are essentially a bottom fish, the main supply now marketed being taken with hooks dropped in deep water, much as cod are caught; but in pursuit of food they rise to the surface, and then show themselves, breaking the water, and at a distance, especially with the sun shining on them, may be mistaken for menhaden. They dash in and out among a school of menhaden, biting and tearing, apparently more in wantonness than to gratify their appetite. Indeed, as those whose business it is to open and clean bluefish for the table will testify, only a small percentage will have in their stomachs any trace of menhaden, while nearly all will have the whole or the partly digested bodies of small fish swallowed entire, including young fish of their own species. Bluefish are provided by nature with strong jaws and sharp teeth; they are dangerous customers to have in the net, which they readily bite in holes, or, what is worse, weaken in places without showing the full extent of the havoc they have wrought. No fisherman would knowingly inclose one of them, and no great number are ever inclosed.

The fishermen do their work in the daylight, and are rarely deceived in the character of the fish they undertake to inclose. When making a set, if on coming close to a supposed school of menhaden they find that the fish are wholly or principally weakfish, mackerel, or bluefish, they give up the pursuit and return to their vessel. Their business is exclusively the taking of menhaden for rendering at factories, and they avoid as far as possible the capture of any other species. Occasionally a few bluefish get wedged in among the menhaden so that they do not reach the net to bite their way out, and they find a fitting finale in the fishermen's mess.

It is emphatically true of bluefish, as it is true of bonitos, Spanish mackerel, pollock, and striped bass, that the menhaden fishermen do not and never did take any considerable number in their nets. And as to such bottom fish as cod, hake, flounders, flat-fish, porgies, or scup, sheepshead, sea bass, tautog, etc., which might feed on menhaden when they have a chance, it is enough to say that they are wholly outside the limits of this inquiry, since purse-nets, except when drawn in some very shoal waters, do not reach these fish; in fact there is no pretense that purse-nets affect the supply of these bottom fish, and there could not well be any such pretense, because it is precluded by the very operation of pursing the net, which lifts its lower line and draws it up over and away from the bottom fish, tons of which might lie inclosed within the circuit of the net without a single fish being caught.

(2) Proof failing on the first allegation, there remains the second, which is, that the operation of the menhaden fishery, especially since steamers have come into use, tends to diminish the chief supply of food for edible species by reducing the quantity available to their need and by scattering it over larger areas, thus driving away from the bays, rivers, harbors, etc., and to greater distances in the open sea, the several kind of food fishes which are supposed to make of menhaden their regular diet. To any one acquainted with the facts as they historically have been and as they actually are, it is not easy to treat this theory soberly, so untenable, if not absurd, does it appear, yet it is undoubtedly held with firm faith by many worthy people, and it is the main reliance of those who, whether they believe in it as a theory or not, support this bill. It must therefore be examined and discussed.

At the outset it should be known that this claim or hypothesis of what they allege to be the effects upon food fishes of steamers in pursuit of menhaden is upheld only by those persons who are directly or indirectly interested in fishing with hook and line, either for local markets and summer seacoast hotels, or to a still greater extent in the way of sport for themselves or for city people whom they take out in boats for a day's recreation on the salt water.

None of the fishermen engaged in the regular business of taking food fish for general consumption join in this outcry against the purse nets; they know its futility and injustice. The men who take fish in ponds, fykes, weirs, or other traps, which are now not only the methods most in vogue, but also the most effective and most scientific methods for supplying to city markets fresh fish in its best condition as food, at first when purse nets were a new contrivance, and especially when they were first used on narrow bays, were inclined to antagonize them; they feared that such nets would be ruinous to their own mode of fishing, and for some years they remained suspicious of the "pesky purse netters;" but further experience has convinced them that there is no interference and no detriment to them resulting from the use of the purse nets. The smack fishermen, who supply the city markets with fresh cod, sea bass,

and even with the disputed bluefish itself, and the large number of fishermen engaged in taking mackerel, have no complaint to make against the menhaden fishermen except that sometimes they can't get all the menhaden they want as bait with which to set their trawls or otherwise to allure their finny prey.

It ought to be further recalled that the section of seacoast on which this alleged damage to hook-and-line fishing is claimed to result from the use of purse nets may be said to be practically limited to the coasts of New Jersey and Long Island. Elsewhere, both north and south, so far as I can learn, there is no serious trouble, and no complaint has been made public. The demand for the destruction of the menhaden fishery is confined to those persons, few or many, who want to enjoy hook-and-line fishing along the coasts of Long Island and New Jersey, and who fancy they would be more sure of a day's successful sport or catch if the bays, rivers, harbors, and the open sea for 2 miles out could be turned by legislation into a fish preserve from which the obnoxious steamers and the terrible purse nets should be rigidly excluded.

Admitting that this fancy of theirs, for which no verified basis of fact has ever been presented, deserves serious attention—and it seems to have so far impressed the committee as to secure, at a former meeting, its partial acceptance and favor for this astonishing bill—its whole foundation is upset by a single established fact, which is matter of record, and does not admit of denial. Bluefish were not accounted of much commercial importance as a food fish until after 1870. For many years they were not seen at all on the northern seaboard, and a generation grew up in such ignorance of the bluefish's superior table qualities that when they again visited their old resorts, and some of them were shipped to market, they could not be sold for more than 1 or 2 cents per pound.

It happens, also, that steamers as a more speedy and sure means of pursuing menhaden did not begin to supplant sailing vessels until after 1870. Yet it is true—indisputably true—that since then the yearly supply of bluefish, as well as of edible fish in general, has steadily increased in New York City markets, and though population has grown rapidly and facilities for transportation of fresh fish to distant points have multiplied, and the use of refrigerator rooms for storage of iced fresh fish has taken large quantities to be kept until out of season, so that the demand for fresh bluefish might fairly be expected to outrun the supply, prices have not materially changed during recent years.

The operations of the menhaden fishermen have extended, the number of steamers has enlarged, and the aggregate catch has increased, yet during this same period of ten or twelve years the bluefish have been caught in greater and greater numbers, and their market price, which is the surest criterion of relative scarcity or plenty, has fluctuated within very narrow limits, averaging but little above what it was fifteen years ago. It thus appears, conclusively, that so far as concerns the question of "protection" to the bluefish which are sold in the main distributing markets of the country, there is no need of any; their number increases and their selling price remains at a low figure, without any legislation.

It follows, that if there be need of "protection" to any kind of "fisheries on the Atlantic coast," it must be the fishery with hook and line out of small boats propelled by oars or sails, either for profit or pleasure; and the only kinds of fish so taken which could be affected by the menhaden fishery are bluefish, chequet, Spanish mackerel, bonitos, and striped bass. The question is pertinent, then, in what way and to what

extent does the pursuit of menhaden by steamers and their capture in purse nets affect these varieties of edible fish?

It has already been shown that none of them feed upon menhaden exclusively or mainly, and that no considerable number of any one or of all of them was ever caught in purse nets, except on three or four occasions.

Such being the case, the presumption must be that the asserted effect of the menhaden fishery upon even those fish which are chummed for or trolled for or otherwise caught out of small boats with hooks and lines can not be important. This presumption can only be overcome by positive proof to the contrary.

The advocates of the bill should be required to produce such proof before the least tolerance is given to their demand for that extraordinary sort of "protection" which involves the destruction of another, a larger, and a far more useful branch of the fisheries. Have they done this? Has a single item of reliable proof from disinterested and competent sources been laid before the fisheries committee, going to show that the clamor against the menhaden steamers has any solid basis? I can not learn that this has been done; I can not learn that any valid testimony from witnesses who speak with positive certainty, and are entitled to full credence, has been submitted in support of this bill. Abundance of ideas and beliefs may have been elicited; opinions naturally vary widely on subjects so recondite and so little understood as the habits and movements of fishes in the great deep. You may have had theories advanced or views expressed by experienced men, and even by scientists themselves, which a larger knowledge and more complete inquiry would disprove; in fact, on the fundamental question underlying this whole agitation—the question of what effect, if any, man's operations have ever had or can have on the quantity of fish in the sea—such leading American authorities as Professors Baird and Goode and Mr. Blackford began their investigations years ago with a prejudice, if I may so speak, against the menhaden fishermen similar in kind if not in degree to the sentiment toward them held by many good people of New Jersey and Long Island; but in their case continued observation and analysis of recorded facts led them to modify their first impressions, and to coincide with Huxley and other naturalists, who affirm that nothing man can do will make any material difference with the coming or going, the scarcity or plenty, of fishes in the sea.

The bill, I respectfully submit, rests upon assumptions and ignores facts. But even if, for argument's sake, this asserted effect be admitted, it is still a legitimate inquiry whether the larger ought to give way to the smaller, the more valuable and more useful to the lesser, the practical and beneficial industry to the quest of sport or pleasure.

The foregoing discussion has, I think, demonstrated that the only kind of "fisheries on the Atlantic coast" which claim to need "protection," and in order to get it demand the destruction of the menhaden fishery, is that which is practically restricted to the coast of two States, and which employs small boats during a few months of the year for taking food fishes with hook and line, largely for sport. This is the actual extent and nature of the need for "protection" which, it is assumed by the bill, warrants and requires the absolute extirpation of an industry foremost among the maritime activities of the American people. Ought there to be the least hesitancy in any honorable legislator's mind as to his duty in relation to such a bill? If the sense of right and justice to which I appeal were not of itself enough to enforce the conclusion that this bill does not deserve any countenance or support from

either house of Congress, I desire to ask your further attention briefly to the economic aspect of this matter.

Aside from the uses made of menhaden for food, either fresh, salted, or put up in oil like sardines, the principal products of the fishery, indeed the only ones which concern this inquiry, are oil and scrap or guano. The oil as now made is a clean, sweet, pure, and limpid article, largely used in the industrial and mechanic arts, and also mixed with other animal oils. There is no way of reaching the precise production of oil and scrap, because no authenticated figures covering the whole field of this industry have ever been reported, but a sufficiently near approximation can be had.

The United States Menhaden Oil and Guano Association was organized in January, 1874, and its local statistical committees, in their yearly reports to its secretary, have included nearly or quite all the manufacturers within their respective districts. From its reports for the thirteen years from 1873 to 1885, both inclusive, it appears that the total production of oil at the factories, so reported, was 31,314,156 gallons, or an average of 2,408,781 gallons each year; that the price of fish oil, which, in 1870, just preceding the introduction of steamers into the fishery, was 60 cents a gallon, has gradually declined, until for 1885 it averaged under 30 cents a gallon; and that a fair average price for the thirteen years would be 40 cents, at which figure the aggregate yield of oil was worth to the manufacturer \$12,525,662.40, or an average of \$963,512.50 each year.

Beside this direct cash value of oil produced from menhaden, amounting yearly to nearly \$1,000,000, the utility of the manufacture to the country in cheapening prices of all kinds of animal oils, and also, to a considerable extent, of vegetable oils, while it can not be computed with exactness, has obviously been very large.

Further light on the importance of this product of the menhaden fishery may be had from a comparison with the importation of whale oil during the same period. As appears from the tabular statements in the New Bedford Shipping List's Annual Review of the Whale Fishery for 1885, it appears that during the thirteen years from 1873 to 1885, both inclusive, there were brought into American ports 12,708,543 gallons of whale oil, which, at the average price for those years of 53 cents, would have been worth \$6,735,527.79; but of this quantity there were exported 2,382,381 gallons, worth \$1,262,661.93, leaving for domestic consumption a total of 10,326,162 gallons, or less than one-third the production of menhaden oil, and a total value of \$5,472,865.86, or less than one-half of that of the menhaden oil made in the same period.

The other product of the menhaden fishery, the refuse left after expressing the oil, is called scrap, pomace, or fish guano. It was formerly used in the crude state, either as a fertilizer applied direct to the land or, to a far larger extent, it was mixed as an ingredient in the manufacture of commercial fertilizers, its large percentage of ammonia making it the most important and active agent in quickening and strengthening the other properties which give such fertilizers value as plant food. Of late years most of it has been sun-dried at the factories, and thereby made more available for carriage to distances and more convenient and efficacious for use. It still remains the chief source of supply of ammoniacal basis for commercial fertilizers, though increasing demand has led to partial substitution of other substances, none of which, however, have taken its place.

From the annual reports of the above association, it appears that, reducing the crude scrap when reported to its equivalent weight in dry

scrap, there have been manufactured at the factories reporting to the association in the thirteen years from 1873 to 1885, inclusive, 610,399 tons, or a yearly average of 46,954 tons. As it is estimated that in a ton of manipulated fertilizer ready for the soil the usual proportion of scrap is one-quarter, it is seen that the factories in the past thirteen years have contributed the ammoniate for 2,441,596 tons of fertilizer, or at the yearly rate of 187,816 tons. As it is usually considered that in growing cotton, for which crop these fertilizers are largely used, 250 pounds are needed to raise one bale, it would follow that if the fish scrap made on an average each year at the factories reporting to the association were all applied to the raising of cotton, it would have yielded a crop of 1,502,528 bales.

A still more striking view of the immense importance to the agricultural interests of this country which the menhaden scrap or guano possesses may be seen if the fact be recalled that since 1870 the large and then increasing importations of Peruvian guano, which sold at \$40 and upwards per ton and took several million dollars each year out of the pockets of American farmers, have been almost stopped, and its place in the economy of fertilizing American fields has been taken by the menhaden scrap. If we assume that without the scrap there would have been need for an equal quantity of Peruvian guano, then the 610,399 tons of scrap would have been worth to growers of cotton, sugarcane, corn, and other farm products, a sum not less than \$36,623,940, or at the yearly average of \$2,817,210. The saving, moreover, effected by this exchange of a foreign for a home-made guano will readily appear from the fact that, whereas the former sold for \$60 or more per ton, the latter has averaged in price less than \$30 per ton.

There are other considerations which might be urged in connection with this branch of the subject; but I have said enough to show conclusively the great economic importance of the products of the menhaden fishery—an importance which runs far beyond the immediate cash return which they bring to their manufacturers—and I do not wish to weary your patience.

I ought not, however, to close without again reminding you that this bill, if enacted, would work a practical confiscation of the capital invested in factories, machinery, drying platforms, scrap-houses, steamers, boats, nets, and other gear employed in the business. Most of this material, machinery, apparatus, and vessel property is adapted to the particular uses for which it is designed, and would have little or no value for any other purpose. To forbid its use in taking and rendering menhaden is therefore to confiscate nearly or quite its entire present value to its owners, who, in prosecuting a legitimate industry, have expended large sums of honestly earned money. They now have considerably over \$1,500,000 in property which this bill would render almost valueless. I therefore insist, as the simplest dictate of common justice, that before the bill becomes law, should such a calamity be possible, it ought to provide for a commission to appraise and award the compensation which should be paid to the owners of this confiscated property.

Such, gentlemen, has been, to my mind, the overmastering import of this bill as dealing a death blow to the menhaden industry that I have not stopped to examine it in a merely critical sense. But a pertinent illustration of its rash and reckless nature is afforded in its second section, which forbids the use of purse-nets “or other appliances” along the Atlantic coast or in any bay, river, harbor, etc., “for the capture of fish to be manufactured into oil or into fish guano or other fertilizing

material." No matter what the nature of the fish from which oil or guano may be made, whether fit for food, like porpoises, or merely predaceous, like sharks, they may not be taken in any purse-net "or other appliance" along the entire Atlantic coast for 2 miles out to sea, where alone they would or could be taken to any advantage, and are thus left to the undisturbed possession of the ocean, "protected" by the American Congress from the enterprise of American citizens who might utilize them for the benefit of themselves "and the rest of mankind." This is to be done over 2,000 or more miles of seaboard, although the source of trouble supposed to require such heroic treatment—the *casus belli* in this war upon legitimate industry—is confined to about 200 miles of coast, and is there a myth or a mere guess, with no solid basis of ascertained fact. To still further exemplify the wholesale folly of this section, it may be stated that on the coast of Maine last year another species of herring, locally known by the Esquimaux term, kiack, were found to yield oil in paying quantities, and two factories manufactured 50,000 gallons of oil and 900 tons of scrap. Under the bill this kiack fishery, on a coast where there is no pretense and hardly a possibility of interference with any other fishery, is to be cut down in its promising infancy in order that Long Branch hotels may hope to have fresh bluefish on their tables continuously and short branch railroads may entice fresh travelers from the interior in quest of promised sport with hook and line.

Finally, with a few words in review of the main point presented in the bill and of the argument I have essayed to make against its passage, I am done.

The only kind of "fishery on the Atlantic coast" that demands any measure of "protection" against the menhaden fishery has been shown to be fishing with hook and line in small boats going out from the shore, mostly in bays, rivers, and harbors, which are clearly within what the lawyers call the *fauces terræ*, and are therefore subject to State jurisdiction. The feeling which inspires this demand is limited to a narrow strip of seacoast, principally of New Jersey, and even there is not shared by farmers and others who do not have a direct concern in the use of boats, or in the business of keeping summer hotels and boarding houses.

These parties in interest, the hook and line fishermen (perhaps not all of them, but a majority), the hotel and boarding-house keepers and the managers of shore lines of railway, have or claim to have become convinced that the fishing which is so great an attraction and so valuable an industry, has been impaired and broken up by the operations of the menhaden fishermen, and in order to be "protected" they ask Congress to pass this bill. They do not adduce any attested and established facts in support of their claim, but when questioned the most experienced fishermen on that coast offer only opinions and beliefs.

Were the steamers to be stopped, as this bill would stop them, other conditions remaining unchanged, there is no evidence whatever that bluefish would be any more plentiful in the waters for which protection is asked. Indeed, only a year ago last August, with all the steamers in full pursuit of menhaden, there came on the Jersey coast such a run of bluefish that at Sea Bright they were reported to have been sold at 2 cents apiece, and for a time, about the same period last year, the bluefish were very plentiful on that coast, as may be seen by the fol-

lowing item clipped from Long Branch correspondence of the New York Times, under date of September 5:

Bluefishing is most excellent now. The fishing banks off the Branch are daily covered with craft of all kinds, and the water is rippled in hundreds of spots by swiftly moving shoals of fish. Many of the young men who are spending their time at the Branch go out through the surf with the fishermen and make fine hauls.

On the other hand, the greatest naturalists of the age, who have spent years in patient investigation of the habits of fish and in study of the history of their movements wherever recorded in the annals of the world, are fully satisfied that man is powerless to make any real or lasting impression upon the great bodies of fish in the sea, and that periods of relative scarcity or plenty prove nothing as to causes that have produced those effects.

Appearances and disappearances of particular species of sea fish on certain coasts have repeatedly been noted in history, and within the present century mackerel and bluefish have left the shores where they had been abundant, and have returned in numbers as great as before or greater; and these occurrences took place long before the menhaden fishery had been begun. Moreover, the number of menhaden yearly manufactured into oil and scrap, great as the figures appear, are but a flea-bite compared with the number annually consumed by predatory fish, birds, and sea reptiles. In the past thirteen years of recorded statistics the average number rendered at factories was 567,423,000; but Baird estimates the total consumption of menhaden in a year by their natural enemies to be three thousand millions of millions; so, if the average number taken by man were to be doubled, it still would be only as one in three thousand millions of those annually destroyed, to say nothing of the still greater numbers who survive.

Even if it be conceded that there is a real and not a merely apparent decrease in the number of food-fish along the coasts of Long Long and New Jersey at the present time as contrasted with fifteen or twenty years ago, if, while the market supply of these fish has more than kept pace with the increased demand, there is a perceptible falling off in the catch at any given point on those coasts, I still ask, in the light of the authentic facts and figures presented and of the deliberate judgment of such eminent scientists as Huxley, Tyndall, Baird, and Goode, is it not a violent and wholly unsustained assumption to allege that the steamers or the purse-nets used in catching menhaden have or can have anything to do with diminishing the supply of fish which are not caught in purse-nets and which do not need menhaden as food, or, of they do, have them in abundance and more widely scattered as a result of their pursuit by steamers. And I again ask, ought legislation of so sweeping and disastrous a character as this bill prescribes to be based on mere assumptions, without any fixed foundation of clearly established fact.

Senator SEWELL. I should like to ask Mr. Reeves a question. Are you engaged in this business yourself or do you appear as counsel?

Mr. REEVES. As I said, I am not a lawyer. I am not the paid advocate or attorney of the menhaden fishery, which I come here in part to represent. I wish it distinctly understood that I came here impelled solely by regard for the welfare of the community among which I live, which community (the village of Greenport) is more largely affected by this bill than any other community in the State of New York, or perhaps any other of equal size in the country. One of its main industries, perhaps the leading industry of that village, is the menhaden fishery, which is conducted by citizens having factories at distances of 10 or 15 miles away.

Senator SEWELL. Associated companies ?

Mr. REEVES. Some of them are and some are individuals. There are some twelve or fifteen of them, but the number in practical operation last year, I think, was eleven or twelve.

Senator DAWES. You stated in the beginning that you had no interest in it.

Mr. REEVES. None whatever. I have never had a penny of interest in the matter ; I have simply been a looker-on. My only interest is because I reside in a community that is so largely engaged in the business, and naturally I have listened to whatever was going on and have learned what there was to be known about it. I have not a knowledge of the practical details which gentlemen who are with me have, and, of course can not answer questions of that nature ; but any question which relates to this inquiry under the terms of the bill I have endeavored to set forth.

The CHAIRMAN. You spoke of millions of dollars being invested in these factories.

Mr. REEVES. A million and a half is the estimated amount, I think.

The CHAIRMAN. You spoke generally of millions of dollars along the coast. I have no doubt there are millions, but have you any idea of how many millions ?

Mr. REEVES. I said a million and a half, judging from the returns made by the Menhaden Oil and Guano Association, from whose reports I have obtained most of my statistical information. As reported in January last, the amount then invested was \$1,400,000 ; but there was a considerable amount of property not employed in the fishery during the year—factories not in use. Probably there are \$300,000, \$400,000, or \$500,000 not included in this report.

The CHAIRMAN. Do you know how many factories there are ?

Mr. REEVES. I have not the statistics of them with me. Some of the gentlemen, I presume, have. One gentleman says fifty-odd factories on the Chesapeake Bay, and about one-third were used last summer.

Senator RANSOM. I do not mean to be officious, but I see in looking over the very carefully written memorandum by Mr. Goode, on page 15, it is said :

In 1878 the menhaden oil and guano industry employed capital to the amount of \$2,350,000.

It goes on and states the number of men and vessels employed and the fish consumed, and then concludes :

The value of the menhaden fishery for this year being \$1,658,000.

Mr. D. T. CHURCH. There are between \$4,000,000 and \$5,000,000 invested, but the returns reduce it to about 25 per cent. on the dollar practically.

REMONSTRANCE OF PERSONS INTERESTED.

Senator ALDRICH presented to following memorial :

To the honorable Committee on Fisheries of the United States Senate :

GENTLEMEN : The undersigned, manufacturers of menhaden fish oil and fish guano and dealers in the same, and others interested in the industry, do most earnestly and respectfully protest against the passage of the bill known as the Sewell fishery bill, which we believe to be unjust in its provisions, inimical to an important industry which the passage of the bill would practically extinguish, entailing serious losses on those engaged therein, while it would subserve no good purpose and prove beneficial to no industry. We believe the bill to have been prompted through a misappre-

hension, and therefore respectfully ask that you make a thorough investigation of the facts, believing that such action on your part will convince you that the bill is unjust, and should not become a law.

STATEMENT OF JAMES E. OTIS.

JAMES E. OTIS (of New Jersey). Mr. Chairman, I live on what you may call the largest bay there is in New Jersey, outside of the Delaware Bay, and where there are supposed to be a great many bluefish caught. It is the Great Bay, in the counties of Atlantic, Burlington, and Ocean, New Jersey.

In regard to the food fishermen, I would say that we have watering places there on the beach where a great many people from the cities go, and while there catch fish and go gunning. It is advertised as being the greatest place in the known world for that business by the railroad people. At certain periods of the season there are large quantities of good fish there, and at that time we catch all we want and more, too. At other periods we do not catch any. The fishermen are asked what is the cause of it; they give the most ready excuse that comes to their mind, and say the menhaden fishermen have caught them all up.

The CHAIRMAN. Has this been the case for the last fifty years at irregular intervals?

Mr. OTIS. I do not remember as long as that; about twelve years I am speaking of. I know of that.

The CHAIRMAN. But these intervals have existed?

Mr. OTIS. Yes, sir; it is the same way with the menhaden outside. We have been six weeks without seeing any, and then they would strike in and jam up the whole water way.

Senator DAWES. What is the interest that is promoted by this bill?

Mr. OTIS. I do not think there is any in my section of the State.

Senator DAWES. There must be some interest promoted by it or the bill would not come in.

Mr. OTIS. That is about a fair statement. These amateur fishermen when there are no fish there ask the men who take them out what is the cause of their not catching any fish, and they say, "The menhaden fishermen have caught them all up."

Senator DAWES. What is your opinion about that?

Mr. OTIS. My opinion is that when there is a run of fish they get all they want and more, too; but when there are none nobody can get any.

Senator DAWES. What is the effect of taking menhaden by those employed in taking them for fertilizing purposes? What effect has that upon fishing within the 3-mile limit?

Mr. OTIS. The menhaden and most of our fish we catch within a mile of the shore.

Senator DAWES. What is your opinion about its depriving food-fish of their food?

Mr. OTIS. I do not think it has anything to do with it at all.

Senator DAWES. Do you mean to say that in your opinion the catching of the menhaden as it is carried on now does not affect fishing with a line within 3 miles?

Mr. OTIS. No, sir; most of the fishing we have with us with hook and line is not outside but inside in the bay.

Senator DAWES. Within 3 miles?

Mr. OTIS. The bays are inland—inside waters.

Senator DAWES. Are the menhaden taken inside?

Mr. OTIS. No.

Senator DAWES. Then, if this bill should prohibit the fishing for menhaden within 3 miles, what harm would it do to the menhaden fishing?

Mr. OTIS. It would kill the business.

Senator DAWES. How would it if you do not take them within 3 miles ?

Mr. WHARTON. The State law of the State of New Jersey forbids such fishing within the bays. It does not undertake to say anything about the fishing outside the coast line, but within the bays it is prohibited.

Senator DAWES. Does it prohibit all fishing ?

Mr. WHARTON. It prohibits all menhaden fishing within the bays. Almost all the menhaden fishing is done where Mr. Otis says—outside, of course, because they are not allowed to fish inside ; but nine-tenths of the fish caught in New Jersey are caught between the shore and the 3 mile limit.

Mr. OTIS. Caught within a mile of the beach.

Senator DAWES. Then, you mean to say that this bill would prevent the catching of menhaden as it is now carried on ?

Mr. OTIS. Yes, sir ; it would kill the business. The bill, as I understand, makes a line. We would suppose that a man would pretty nearly go through a 9-inch mesh if he was not too large. The menhaden are small fish.

Senator DAWES. What is the size of the mesh that menhaden are taken with ?

Mr. OTIS. Two inches, or a little more.

Senator DAWES. This bill absolutely prohibits menhaden fishing within the limits prescribed in the bill ; and that prohibition you say would have the effect to kill the business ?

Mr. OTIS. Yes, sir ; it would kill the business.

The CHAIRMAN. Whom is this bill intended to benefit ?

Mr. OTIS. That is what we should like to find out. I have talked with the people along that shore, and I can find but very few who know anything about the bill.

Senator DAWES. Are you acquainted with the fishermen on the shore who contribute to the supply of the New York market ?

Mr. OTIS. No, sir.

Senator DAWES. You do not know where they get their fish ?

Mr. OTIS. No.

Senator DAWES. Do you know where the men get their fish who fish with a line and carry the fish to the market of New York and other markets ?

Mr. OTIS. They get them in those inland waters that I mentioned.

Senator DAWES. Are they in favor of this bill ?

Mr. OTIS. Not that I know of.

Senator DAWES. Are you acquainted with them ?

Mr. OTIS. Yes, sir.

Senator DAWES. Have you conversed with them about this ?

Mr. OTIS. Yes, sir.

Senator DAWES. What do they say ?

Mr. OTIS. They are as much opposed to the bill as it stands now as we are, for this reason : As I said before, these amateur fishermen go out and if there do not happen to be fish there so that they do not catch any, they ask the reason, and the boatmen tell them the menhaden fishermen have caught them all up. That has been the cry, and now they say this bill has been introduced with, perhaps, a possibility of its becoming a law, and they are as much worried about it as the menhaden fishermen, because they say if it does become a law here are three hundred men in the county of Burlington that rely on menhaden fishing for a livelihood who will go right in and go to fishing with hooks and lines and compete with them and take their living away from them.

STATEMENT OF C. H. PARSONS (OF GLOUCESTER, MASS.).

Mr. PARSONS. Mr. Chairman, I come from a big fishing town, and I believe there were some people last week before a committee fighting a reciprocity treaty. I represent the oil business. I am not in the menhaden fishery, but I buy their product together with the codfish product. That is our whole business. We sell our product to the tanners and curriers, and such like. I claim that if this bill passes it will entirely obliterate the menhaden fishery and will injure the tanning interest. Of course, as you well know, tanners have to have oil and grease to put into leather, and they are always after cheap greases. The result of the menhaden fishery has been to keep tallow and grease down to a figure where the tanners can use them and manufacture the leather to advantage. If we now have this bill passed and take out of the market 50,000 barrels of oil (for that is about the average of what the menhaden fishermen catch, as near as I can estimate) it will make grease of all kinds go up, and tallow will go up. It is now $3\frac{3}{4}$ cents a pound, and that is the cheapest known, and other greases are in the same proportion.

If this is taken out of the market entirely instead of paying, as to-day, 35 cents a gallon for cod-oil for tanners' use, we shall be obliged to pay 50 cents and more a gallon for it. We can not afford to pay those prices. Now, this is a competition with tallow. Of course, tallow will not advance a great deal, because tallow now, as they are killing cattle for hides and meat, is increasing and the consumption of fish oil is decreasing amongst the tanners. All that will induce the tanners now to use fish oil, and, of course, what they use helps the fishermen so much, and it is used because of the cheapness of the article.

Senator RANSOM. Will tallow or anything else answer the purposes of the tanners as fish oil does?

Mr. PARSONS. It will. We import a grease from Europe that has taken the place of fish oil somewhat, and cheapened the price somewhat.

Senator RANSOM. You import that from Europe?

Mr. PARSONS. Yes, sir.

Senator RANSOM. You have it not here?

Mr. PARSONS. We have it not here.

Senator RANSOM. Is it as good as the fish oil?

Mr. PARSONS. It is.

Senator RANSOM. How many barrels of oil do you get from this fishery?

Mr. PARSONS. I should judge, in round numbers, about 50,000.

The CHAIRMAN. What do you mean by that?

Mr. PARSONS. That is what the menhaden fishery produces.

The CHAIRMAN. Altogether?

Mr. PARSONS. On the Jersey coast and on the Sound coast.

The CHAIRMAN. That includes the whole coast of the United States, so far as you know?

Mr. PARSONS. As far as I know. Some years it may be less and some years more, but I should think 50,000 barrels would be a fair estimate of what the product is.

The CHAIRMAN. What is it worth a gallon?

Mr. PARSONS. It is worth to-day 30 cents. It was bought this season for 25 cents. That is about the average price of the product this year—25 cents a gallon. It has gone up a little now. Furthermore, this oil is refined and it is largely used in the mines for burning-oil in lamps

Miners can not use petroleum oil of any kind in their lamps on account of the explosive nature of it; therefore they have to use fish oil, and it is refined and a large consumption is taken there.

The CHAIRMAN. Is that the commercial name of it—fish oil?

Mr. PARSONS. Yes, sir, fish oil; as far north as the whole fishery goes. I know a little something about that. I have dealt in it in the menhaden field; it is called "slivers." They used years ago to sliver the fish, but that was before they used to press them so much for oil. They cut off each side of the fish—we call it a sliver—leaving the backbone intact. That we used to salt and barrel up the same as mackerel, to be used as bait for the cod fisheries. It is done so yet, but not to so large an extent as formerly. Now they use more phosphate, and our vessels go to Newfoundland and get fresh herring and bring them home iced up, frozen, and kept in a box and then broken out and sold to the fisherman for bait, fresh bait, to go on the banks fishing. At times they can not get herring from Newfoundland, and therefore they have to resort to porgies, as we call them, which are used with menhaden for bait to take its place. They are largely used in that way. Therefore, if this bill passes it will prohibit our fishermen from getting any bait, and that would kill their business as far north as the shore fishing goes to get fish, haddock, and such like.

The CHAIRMAN. There permit me to ask you, Mr. Parsons, what amount in full does this bait product amount to?

Mr. PARSONS. It would amount to as much as they wish to use.

The CHAIRMAN. But how many dollars in a year do you estimate it?

Mr. PARSONS. I can not tell you.

The CHAIRMAN. What proportion of the bait do they use?

Mr. PARSONS. We have sold ours when we had to salt them and sliver them as high as from eight to ten thousand barrels a year. I suppose in Gloucester there have been used as high as five thousand barrels a year of menhaden.

The CHAIRMAN. At how much a barrel?

Mr. PARSONS. We used to get from \$4 to \$7 a barrel for the bait.

The CHAIRMAN. But you do not know the aggregate?

Mr. PARSONS. No; to-day I should judge fresh bait would be worth——

The CHAIRMAN. But the aggregate amount?

Mr. PARSONS. I do not know.

Mr. D. K. CHURCH. A half million dollars at least, I suppose, is expended for bait.

Mr. PARSONS. These vessels go to George's fishing there, and they get the largest supply of codfish for the Boston, New York, Philadelphia, and Chicago markets. Something like 100 sail go from Boston. About half of these belong to Gloucester and about a third to a quarter or more belong to Boston, called the Irish boats, and the balance belong on the south shore about Provincetown. They go on George's now and feel for the fish there, and they use all this fresh bait. That is where your markets are supplied from. They are not supplied from the Jersey coast or Block Island shore, for the few fish got at Block Island in the winter season would not supply a small village with fresh fish. The main supply is drawn from George's, and they must have this fresh bait to fish with.

I cannot see for the life of me that the menhaden fishery injures any food fishes at all. It is rather a benefit to them. Certainly in our business it would be a great detriment to us to have the menhaden taken off the market. We could not carry on our business and be confined to the

ports of Gloucester and Provincetown. That is the only source we have to buy our oil in. We should have to buy then, of course, nothing but the cod oil of the provinces. If the bill passes and the duty is kept on oil it takes that market out of us. The duty there is 25 per cent. ad valorem, and that amounts to about 10 cents a gallon, and we can not furnish them oil down there and make a profit. Therefore it is very essential that this fishing should go on as it is, and that the tanners should have their oils and greases as reasonable as possible.

Senator SEWELL. Are you engaged in menhaden fishing?

Mr. PARSONS. No, sir; I am engaged in the oil business, and have been for twenty years, buying the oil product of the cod fishery and the menhaden-fishery.

Senator SEWELL. Are you familiar with the oil product of the menhaden fishery?

Mr. PARSONS. I am familiar only in this way, that I have visited their factories time and time again, and am acquainted with the oil.

Senator SEWELL. Will you give us the locations of the factories north and south along the coast where they are?

Mr. PARSONS. I can not give the exact localities of them. I have followed them on Long Island, at Green Point, Barren Island, Fire Island, and at Tiverton, in Rhode Island.

Senator SEWELL. They run from Rhode Island to Cape Henry?

Mr. PARSONS. Yes, sir.

Senator RANSOM. And below Cape Henry?

Mr. PARSONS. I never saw them below Cape Henry.

Senator SEWELL. Do you know the proportion of menhaden caught between Sandy Hook and Cape May?

Mr. PARSONS. No, sir. I can tell you better how much oil they catch; I do not figure on how much fish they catch. We figure on how many barrels of oil come to market. I can tell you how many barrels of oil are on the market to-day, and how many are held by manufacturers, and how much by dealers.

Senator SEWELL. Can you say whether the fish caught between Sandy Hook and Cape May are used for bait?

Mr. PARSONS. Yes, sir. Our Gloucester people have bought them down at Tiverton and at Block Island. They have gone there and waited a week to get the fish for bait to go on the George's fishing grounds.

Senator SEWELL. Menhaden that have been caught on the New Jersey coast?

Mr. PARSONS. On the New Jersey coast; they have been caught there and brought up that way.

Senator SEWELL. In a condition for bait after being caught in summer on the New Jersey coast?

Mr. PARSONS. If they have not been caught more than twelve hours they would be fit for bait, but if caught twenty-four or forty eight hours they would not be, and they are hardly fit for oil then.

Senator SEWELL. Do the fleet that fish on the Jersey coast and rendezvous north of Long Island take their products north?

Mr. PARSONS. I can not say. The factories located on the Jersey coast would not carry their products north of the Jersey coast to press out oil, but the factories located at Tiverton and those on Long Island would go south for the fish and would bring them to their factories to be pressed.

STATEMENT OF J. S. JOHNSON, OF BALTIMORE, MD.

Mr. JOHNSON. Mr. Chairman, I am engaged partially in the twine-netting business. That is only affected so far as the labor engaged in producing it is supplied by the materials obtained from the menhaden fishery. This bill would bring about the destruction of that great interest, and so affect the labor employed in the production of the material used for the nets. I have no statistics to show how many are employed in it, but 90 per cent. at least of the labor that is employed in the production of these nets and twine is that of women. My experience with them has been that it is the most patient and reliable labor we can get. They are principally girls, some of whom have others dependent on them. I do not know exactly how many are employed. There are probably between 500 and 1,000.

The CHAIRMAN. Seven or eight factories?

Mr. JOHNSON. There are seven or eight factories producing twine in the country. The menhaden fishery does not embrace the whole business of the factories, but it probably amounts to about one-half. The eastern men—the Gloucester and Boston men—probably use more of it than the others do. The labor on the other netting is about 90 per cent. of it women, and women who are dependent on their labor for support, and it is a class of labor that has no trades' unions and go on no strikes. They are reliable, and they are docked for every hour they lose. They work patiently for four to six dollars a week, ten hours a day. They will be affected, of course, if the destruction of this interest is brought about.

Senator DAWES. Can you state how much of the menhaden product in a year is used in the twine-netting business?

Mr. JOHNSON. I should think one-half comes from the menhaden fishery.

Senator DAWES. How much is the aggregate value?

Mr. JOHNSON. I have no means of telling. I have not considered the subject.

STATEMENT OF N. M. JURNEY.

N. M. JURNEY (of North Carolina) appeared.

Senator RANSOM. Mr. Journey is here representing this interest in North Carolina; and we have also Mr. Chadwick here, who is one of the menhaden fishermen himself.

Mr. JURNEY. Perhaps I can give my information better by being asked as to the points you want to inquire about in connection with the various topics involved.

Senator RANSOM. Will you state the value of the menhaden fisheries in Carteret County, N. C., and that vicinity?

Representative SKINNER. There are few menhaden fisheries in North Carolina outside of Carteret County.

Mr. JURNEY. I suppose there are fifty to seventy-five boats employed in the business in Carteret County. Some of these boats are small, but many are quite large.

Senator RANSOM. How many people are engaged in the fishery?

Mr. JURNEY. Over 300.

Senator RANSOM. What is the amount of capital employed?

Mr. JURNEY. I should think at least \$75,000. There are at least 200 families or more who are looking to this industry alone for a livelihood.

The poor people who live along the coast where they do not have very good soil to cultivate look to the water as a means of support, and they have invested everything that they can raise for small boats and seine nets, and they are employed by Mr. Chadwick and Mr. Jones, his partner, and by Dye Brothers, and they catch these fish and sell them, and support their families very well in that way.

Senator RANSOM. Do they make oil and guano there too from the fish?

Mr. JURNEY. Yes, sir; these factories manufacture the menhaden into oil and fish scrap.

Senator RANSOM. There is a great deal of other fishing going on there. That is a great fish country?

Mr. JURNEY. Yes, sir.

Senator RANSOM. In your judgment and the judgment of the people there, has this menhaden fishing interfered at all with the other fishing?

Mr. JURNEY. Not in the least. I have lived there six years myself, and the last four years without interruption, and I have no special interest in this matter. I am a minister of the Methodist Church, but I am very fond of fishing, and I should know if there was any objection to this menhaden fishing from any quarter whatever as a means of breaking up the sportsmen, for I belong to that class myself in a certain way. I built a boat myself for that purpose, and I will warrant that I have caught more fish trolling in North Carolina than any man in the State; and there have been more bluefish and more mackerel running there on the coast when there have been more of the menhaden. I have gone out there at times, and when the menhaden were more plentiful, and caught with a hook and line as high as 388 bluefish, averaging 2 pounds apiece.

Senator RANSOM. In that connection, let me ask Mr. Chadwick one question, because he is engaged in the business.

Mr. Chadwick, you have seen these menhaden caught in the nets. Will you give this committee some idea of the number of eatable fish that are taken up when you catch the menhaden?

Mr. JURNEY. Just let me finish and then let him come in. In all the catch of the menhaden there I do not know that I have ever heard any of the fishermen say that they have caught 40 fish that would be a palatable fish at all to eat.

Senator DAWES. Were the menhaden taken within 3 miles of the shore?

Mr. JURNEY. Oh, yes; within half a mile. It would annihilate the business entirely to prohibit such fishing within 3 miles of the shore. They might as well give up and go home. It means confiscation to all the property and turning loose three hundred people with no employment at all.

Senator SEWELL. Have you any personal knowledge of that fact?

Mr. JURNEY. I have. I know every man personally who is engaged in the fishery there.

Senator SEWELL. You do not find any fish outside the 3-mile limit?

Mr. JURNEY. I have never known a single catch beyond 2 miles of the coast.

Senator SEWELL. You stated to the committee that you caught more bluefish when the menhaden were on the coast than at other times?

Mr. JURNEY. I say that year before last, during the immense run of the menhaden, there were more bluefish and mackerel than at any other times.

Senator SEWELL. Is it not true generally that the bluefish and the mackerel follow the menhaden?

Mr. JURNEY. I do not know that it is.

Senator SEWELL. Do you not know that they subsist on menhaden?

Mr. JURNEY. No, sir; I have no knowledge of it in the world. I have caught bluefish of excessive size, and I know they feed upon small fish. I have never yet found in a bluefish or mackerel any menhaden, and we have never known that any kind of fish feed upon them except the sharks; and there has never been the slightest complaint from any other fishing interest in North Carolina, and we have just as much there of the various kinds as you have anywhere. There has not been the slightest complaint from any enterprise there. Many sportsmen go down there. We have a watering place there, and a hotel that will accommodate a thousand guests, and three or four more that I suppose could take care of three thousand people. Quite a number of people from all the South and North come there. I think it is one of the finest places to troll on all the Atlantic coast, and there has never been the slightest complaint made from any source whatever about the menhaden fishery that ever I have heard; but to the people in that country, and especially the poorer class of people, who are looking to this interest for a livelihood and a support, this measure would be just the confiscation of everything.

Senator SEWELL. Do any northern people go down there to fish?

Mr. JURNEY. It is purely local. Opposite Beaufort and Morehead City we have as many as five whale fisheries, all of them full of men who have bought their guns to shoot bombs, and have lances and all the accoutrements necessary for the capture of whales, and if this bill passes it will destroy all their interest. The bill speaks of the "capture of fish to be manufactured into oil."

Senator RANSOM. Have you not written an article on the menhaden?

Mr. JURNEY. Yes, sir.

Senator RANSOM. If you can get a copy of that article, will you send it to the chairman of the committee?

Mr. JURNEY. If I can get a copy this evening and send it, I will do so.

Senator SEWELL. The bill is amended to allow 9-inch nets to be used.

Senator DAWES. They do not catch whales in nets?

Mr. JURNEY. It applies to any kind of fish caught for oil.

Senator SEWELL. It only prohibits fishing by nets.

Senator DAWES. There is a provision here that you can fish for any fish that will not go through a 9-inch net.

Mr. JURNEY. I did not notice that particularly.

Senator DAWES. That is, you may fish with a net of that size. It does not permit you to fish by other means, does it?

Senator SEWELL. It was never intended to prohibit the catching of large fish by any other means.

Mr. JURNEY. But the expression "or other appliances upon the high seas within 2 miles of the Atlantic coast, or in any arm of the sea, river," etc., I did not understand.

STATEMENT OF REPRESENTATIVE SKINNER.

Representative THOMAS G. SKINNER (of North Carolina) appeared.

Senator RANSOM. Mr. Skinner represents a district in which there is a great deal of fishing. It is the great fishing part of this continent,

if I may say so—the Pamlico and Albemarle Sounds and the eastern part of North Carolina. I would be glad to have Mr. Skinner state whether there is, on the part of other fishermen, the shad fishermen, the rock fishermen, the bluefish fishermen, or the bass fishermen, any opposition whatever to the menhaden industry.

Representative SKINNER. I represent nearly all the water of North Carolina. I think if this bill were put to a vote in my district it would not get a single vote. There is some little objection to purse-net fishing in my State, but none to purse-net fishing for menhaden. The only objection we have to purse-net fishing is to purse net fishing in our inland waters for bass. We think that has a tendency to break up the breed.

I wish to say in connection with what some other gentlemen have submitted, that I have been a fisherman almost from my infancy; my father was a fisherman, and I was almost born on a fishing beach. My people have been always largely engaged in the shad and herring fishery. We catch in our district on the Albemarle Sound larger catches of shad and herring, I believe, than in any other part of North America; and it has always been the custom, at least we have always noticed that it has been the habit, of those fish to go and come. Sometimes for four or five years there will be a very small catch of herring, and then will come a tremendous glut of herring without any possible known cause. I remember in 1855, almost as far back as I can remember, that when there had been no menhaden fishing, when there never had been a menhaden caught in North Carolina, there came an immense glut of menhaden. They came all through our sounds. The other fish left. There was the smallest catch of herring that year and for three or four years afterwards that had ever been in North Carolina, but there was an immense glut of menhaden all through our sounds. They were not caught then, and were not caught for many years afterwards to be used for oil and scrap; but both since and before the menhaden have been caught for scrap they have come and gone, the shad have come and gone, the herring have come and gone, and all sorts of fish. The bluefish more especially have come and gone without any ostensible cause, no cause that we could find out. It certainly has not been affected by the menhaden fishing in our district.

I want to say, too, that I have seen the menhaden fish caught, not to a very great extent, because the part of the district I live in is not engaged in it much, but I have seen drafts of them come, and I never saw at any one time many edible fish caught in a draft of menhaden. I do not believe that they associate together. I do not believe there is any fish on our coast that live upon the menhaden as food. Now and then they may cut them up. I have seen bluefish in a gang of menhaden cutting them up, and you would think they were eating them, but I do not think they eat any of them. I have seen fifty or a hundred people fish with a troll-line, and have seen the fish cut open, but I have never seen a menhaden inside a bluefish. I have seen as many as five thousand large bluefish, weighing from 10 to 28 pounds, caught on our coast, and I have seen them cut up, and when menhaden, were all around them, and I have never seen a single menhaden come out of them. I do not believe they eat menhaden.

I want to say that in another part of my district establishments were put up the year before last and last year, and there is being more capital invested in it now at one point in my district, and fisheries for porpoises have been commenced, and this bill would annihilate that business also.

Senator SEWELL. It has been amended to cover that.

Representative SKINNER. The passage of this bill would throw out of employment many men in my district.

STATEMENT OF W. S. CHADWICK.

W. S. CHADWICK (of North Carolina) appeared.

Senator RANSOM. Mr. Chadwick, how many eatable fish have you seen come up when you have taken large hauls of menhaden?

Mr. CHADWICK. Very few; sometimes none. Sometimes we may get a peck or a half bushel in a haul of three or four hundred thousand. As a rule we never get any amount.

Senator DAWES. What kind of eatable fish?

Mr. CHADWICK. We get a perch sometimes, and what you call weak-fish; we call it trout. Sometimes we get a trout; sometimes we may get a little tailor.

Senator RANSOM. Mr. Chadwick, do you represent those engaged in catching fish for food as well as those who catch menhaden?

Mr. CHADWICK. I do.

Senator RANSOM. You are in both businesses?

Mr. CHADWICK. Yes, sir.

Senator RANSOM. Have you any idea where the menhaden spawn?

Mr. CHADWICK. I have not.

STATEMENTS OF N. B. CHURCH, OF TIVERTON, R. I.

Mr. N. B. CHURCH. Mr. Chairman, I am a practical fisherman. I belong to Rhode Island, and am familiar with all parts of the coast. I am engaged in the menhaden fishery.

Mr. D. T. CHURCH. How is it on the Jersey coast? Do the hook-and-line fishermen come to you?

Mr. N. B. CHURCH. When we are there we always see the boats of the food fishermen. There were alongside of our steamer this fall as many as twenty boats at once. I asked them about this bill, and they said they were all opposed to it.

I have no general statement to make in regard to this fishing. I have engaged in the fishing for twenty-five years from the coast of Maine to the coast of South Carolina, and if there is any question you desire to ask in regard to it I can answer it.

Senator SEWELL. I should like to know what proportion of the fish caught on the New Jersey coast is caught within the 3 mile line.

Mr. N. B. CHURCH. I should say, roughly, ninety-nine one hundredths. Probably it would not be quite as much as that, but nearly.

Senator SEWELL. What proportion of the catch of the whole fleet is on the New Jersey coast now, taking last year?

Mr. N. B. CHURCH. The last year was very unfavorable on the New Jersey coast. The catch was very small. I think on the 1st of August or thereabouts the fish came from the south part of the New Jersey coast and went on to the New York coast. I do not think that during the months of August and September there were 5,000 barrels caught on the coast of New Jersey.

Senator SEWELL. How many steam vessels are engaged in the business?

Mr. N. B. CHURCH. I think seventy or eighty altogether on the coast. I do not know exactly.

Senator SEWELL. What is the tonnage of the vessels?

Mr. N. B. CHURCH. The tonnage I think runs up to the largest steamer, which is 125 tons.

Senator SEWELL. What is the capacity of that vessel in fish?

Mr. N. B. CHURCH. She carries 2,700 barrels of fish.

Senator SEWELL. Is that vessel ever full?

Mr. N. B. CHURCH. I have filled her twice.

Senator SEWELL. In how long?

Mr. N. B. CHURCH. In five hours.

Senator SEWELL. What is the capacity of your net at one time for a haul?

Mr. CHURCH. Two hundred and twenty-five feet in length, and from 80 to 100 feet in depth.

Senator SEWELL. How many fish have you caught at any one time at most?

Mr. N. B. CHURCH. Fifteen hundred barrels.

Senator SEWELL. From your practical knowledge of fishing, does it not destroy the fishing grounds of such fish, for instance, as sheepshead, to have these nets hauled over them?

Mr. N. B. CHURCH. In my experience in twenty-five years' fishing I never caught a dozen sheepshead in my life with a purse net or in any other way. I never caught a striped bass in my life with a purse net.

Senator SEWELL. I did not speak of catching them, but of disturbing their feeding grounds.

Mr. N. B. CHURCH. You ask for my opinion. From my own knowledge I know nothing about it.

Senator SEWELL. You have no knowledge, because you have not fished for them with hook and line, and have not located them in that way?

Mr. N. B. CHURCH. I have not.

The CHAIRMAN. In making a haul for menhaden do you get many other fish?

Mr. N. B. CHURCH. Very few; we do not get enough to eat, as a general run.

The CHAIRMAN. Of all kinds together?

Mr. N. B. CHURCH. All kinds together. When the bluefish strike the coast in the spring of the year we occasionally get some bluefish, but very few, and later in the season we do not catch fish enough to eat, and have to buy our fish for eating in the market.

The CHAIRMAN. If you should see a shoal of mackerel, would you not throw your nets for those?

Mr. N. B. CHURCH. No, sir. We very often see schools of drumfish out at sea, oftener at sea outside the 3 miles than we do of menhaden. We see them of tens of thousands of barrels in schools, but we never think of disturbing them. They are no good to us.

Senator SEWELL. Do they not yield fish oil?

Mr. N. B. CHURCH. We never tried it. I do not think there is any oil in them. There is no market for them whatever. I have caught schools of drum on the coast, but we never supposed they were valuable for food fish. We see them in the summer in quantities along the coast, but not to my personal knowledge. Two captains told me that oyster-men in Prince's Bay offered them \$100 each to set on their oyster beds and catch them, for they said they were destroying the oysters. We saw them on the Jersey coast, tens of thousands in a school.

Senator RANSOM. Of the drums?

Mr. N. B. CHURCH. Yes, sir; the school I caught were not edible fish, because we wanted a mess ourselves, and I picked out a nice looking

fish and cleaned it, but it was not edible ; it was full of worms. I scaled and cut a dozen different fish, but they were full of worms half as large as my small finger.

Mr. D. T. CHURCH. What is the size of the net you use ?

Mr. N. B. CHURCH. We use 2½-inch nets. The 8-inch net you spoke of, of course, would be no barrier whatever to the fish.

Senator DAWES. What kind of fish are caught in nets of that sort ?

Mr. N. B. CHURCH. I think they use as large as that to catch porpoises.

Senator DAWES. Could not anything smaller than that be caught in such nets.

Mr. N. B. CHURCH. No, sir ; fish about that size would go in.

Senator DAWES. How much would such a fish weigh ?

Mr. N. B. CHURCH. From 2 to 5 pounds. There are several gentlemen here who can tell in regard to menhaden being necessary to the presence of bluefish. In 1884, the body of menhaden on the coast was on the coast of Rhode Island, and that was the year the bluefish was so plenty at Fire Island, and about there. The fish were caught in Rhode Island and brought to New York to be rendered. In 1885 the menhaden were eastward of here and the bluefish were off shore.

Senator DAWES. Have you observed in schools of fish moving east and those moving back south, whether there is any great difference in the quantity when they go one way or the other ?

Mr. N. B. CHURCH. Generally the quantity seems the largest when they go south. I suppose that is accounted for because they nearly all start at the same time. In 1884 when they took the southern course the coast was a complete body for 25 miles off shore and in, according to the pilots. We were not out, but when they went out it was one solid body of fish going down the coast, and they were followed by a school of sharks, something that I never saw in my experience in fishing before, and I think there were millions of sharks in a school. I have no doubt that there were a million sharks in one large school that I saw.

Senator DAWES. Following the menhaden ?

Mr. N. B. CHURCH. Following the menhaden.

Senator DAWES. Do you think they live on the menhaden ?

Mr. N. B. CHURCH. I have no doubt about that. We have taken as high as 200 menhaden out of one shark. Those sharks were all the way from 6 to 14 feet long.

Senator DAWES. A million sharks. How many menhaden would they take ?

Mr. N. B. CHURCH. That I do not know. Professor Baird can tell. We took as high as 200 whole fish out of one shark.

Senator STANFORD. How long will it take a shark to digest a fish like that ?

Mr. N. B. CHURCH. I do not know. They are just as whole when we cut the shark open as when caught. Probably they are not a great while digesting.

The bill practically does away with fishing for another reason, which not many have stated. Take the fish that are off shore. Generally when they school off shore, which they do occasionally, they are driven there by sharks and driven up into very compact bodies, and the minute you inclose them in a net every shark goes for them and would tear the net all to pieces, and it would be impossible to save any fish.

Senator DAWES. So that off-shore fishing with nets for menhaden is not practicable then ?

Mr. N. B. CHURCH. Not at all.

The CHAIRMAN. You speak of an immense body of menhaden going south, 25 miles in width. How long was that?

Mr. N. B. CHURCH. The first day we saw the fish they were at Coney Island, and the fishermen along the Jersey shore as far down as Squan said they were there, so that probably they were 25 or 30 miles long.

The CHAIRMAN. Then it was a large field of 25 miles square?

Mr. N. B. CHURCH. Yes, sir; that was the notice from the pilots. They said the fish were off shore. We did not see them. If we had had the facilities for catching them at that time, it was impossible to take them.

Senator DAWES. In all your fishing for menhaden what proportion of your catch has been outside of the 3-mile line on the Jersey coast? Of what you have done on the Jersey coast how much has been outside?

Mr. N. B. CHURCH. I think, I said about 1 per cent. Out of 100 99 per cent. were caught within that line, mostly within half a mile of the shore. I have fished a great deal on the Jersey shore, and I have been always very particular about the fishermen who entered the protests. When they came alongside I gave them *carte blanche* to get their fish, measure their own fish; take them, and pay me what they were worth. I asked them always to come and get what bait they wanted at any time, if they would not interfere with my business.

Senator DAWES. If they were left to themselves to do just as they pleased in what way would they interfere with your fishing?

Mr. N. B. CHURCH. They would take my time. If I had to measure the fish out and give them to them it would occupy my time.

Senator DAWES. They do not interfere with the catching of them?

Mr. N. B. CHURCH. Not at all.

Senator DAWES. Is there any complaint that you interfere with them?

Mr. N. B. CHURCH. They say not. I never have found a single instance in all my discussion with the fishermen on the Jersey coast where one of them made a statement but what he was directly opposed to any legislation in regard to menhaden.

Senator SEWELL. Where have you seen anybody on the Jersey coast?

Mr. N. B. CHURCH. All the way from Sandy Hook to Cape May. Most of the fishing on the Jersey coast is between Squan and the Highlands.

Senator SEWELL. Do you go ashore or do they come out to you?

Mr. N. B. CHURCH. They come out to us. I never go ashore. We meet a great many of them right off Long Branch.

Senator SEWELL. There are petitions to this committee from all along there, signed by three or four thousand persons.

Mr. N. B. CHURCH. I do not doubt it, but that is the answer they always give me. I have met hundreds of them in my experience in fishing, I do not know but thousands; and they all tell me they have no objection to our fishing.

STATEMENT OF EDWARD WILCOX, OF PROVIDENCE, R. I.

Mr. WILCOX. I am here to answer any questions that Senator Sewell has to ask in regard to this matter. I have fished on a steamer for twenty years or more, but I have fished more particularly on the Jersey coast for the last eight years.

Senator SEWELL. Have the menhaden increased or decreased during that period?

Mr. WILCOX. I do not see any appreciable difference either way.

Senator SEWELL. What time do you commence fishing?

Mr. WILCOX. Usually from the 1st to the 15th of May.

Senator SEWELL. Where do you strike the menhaden first?

Mr. WILCOX. One or two years I have caught them, say, half way from Sandy Hook to Fire Island. We usually catch the menhaden at the east end of Long Island in the spring of the year. We get them there before we do on the coast of New Jersey.

Senator SEWELL. How near the coast do you catch them?

Mr. WILCOX. Within half a mile, especially in the spring. In the spring they will not show in deep water at all.

Senator SEWELL. Do you fish near the inlets?

Mr. WILCOX. The inlets from the coast?

Senator SEWELL. From the ocean?

Mr. WILCOX. No, sir; not very near. We fish there, of course, when we do not in other places, but there is such a tide there that it capsizes our seine sometimes.

Senator SEWELL. Where is your depot to which you take the fish?

Mr. WILCOX. Barren Island.

Senator SEWELL. If you fish on the Jersey coast for menhaden, say at Seabright, when you pull up you take them to Barren Island?

Mr. WILCOX. Yes, sir.

Senator SEWELL. How long does it take to make that trip?

Mr. WILSON. About an hour and forty minutes to run over from Seabright or Highlands or along there. From the Iron Pier it takes me an hour and forty minutes to run to Barren Island.

Senator SEWELL. Do you know anything about the habits of the bluefish and sheepshead?

Mr. WILCOX. I presume I know just as much as any other person does. I have made it my study to try to learn the habits of the menhaden, and to understand where they spawn, and everything of that kind. In fact, Professor Baird several years ago furnished us with blanks, and thermometers to take the temperature of the water, the kinds of fish seen, and the quantity taken, the direction of the wind, etc., and any matter relating thereto, and I kept that for two years. I made my observations of the temperature of the water three times a day, and I did not know any more about them at the end of two years than I did before I commenced. Of course I have my surmises the same as any one else.

Senator SEWELL. You do not believe that any practical knowledge has been obtained of the menhaden?

Mr. WILCOX. Not at all; no practical knowledge.

Senator SEWELL. As to where they spawn?

Mr. WILCOX. As to where they spawn, I think it is in a great measure as Professor Baird testified before the Halifax commission. The bluefish disappear; where they go he says he does not know. They may go to the Mauritius or to the Canary Islands; he does not have any idea where they go. These fish come on the coast in the spring. In my observation I have had a very good chance to learn. One year they seem to come in on the Long Island shore from directly off shore, and they will be coming from a southeast course, when they will strike the shore, and it is natural for them to follow that shore in the spring. That we know, because I have fixed on them off Rockaway Beach to day, and to-morrow they would be at Fire Island, a distance of 40 miles; perhaps they would go between sunset at night and daylight the next morning, and they would continue to go along, following that

shore on, and when they get to the east end of Long Island we do not know where they go. Sometimes I think they go off shore, but sometimes I think they go into Long Island Sound.

Senator DAWES. In your fishing experience off the Jersey coast what portion of the menhaden that you have taken has been within and what portion without the 3-mile line?

Mr. WILCOX. I have fished there eight years, and I do not remember but twice in the eight years of setting my seine 2 miles from the shore. I do not think in the whole eight years there were more than two instances of setting the nets outside of 2 miles. Of all the fish certainly ninety-nine hundredths are caught within a mile of the shore.

Much has been said of the effect on food fish. I have a little model here of a purse net as we use it. The tendency, in my opinion, of food fish, when disturbed, is to go to the bottom, and not to strike off in a horizontal direction as the menhaden do. If we go around a school of fish that have food fish under them, this is the style of a net we have [exhibiting]. This is about the sized net we use; this is $2\frac{5}{8}$ inches. but we use a $2\frac{1}{2}$ net generally. We have half of this in what we call a working purse. We see a school of fish and surround it, but when we come together we have this arrangement [exhibiting]. This purse-net takes its name from the old-fashioned purse.

If you had an old-fashioned string purse you would see the principle exactly. You put in your thumb and finger to haul it up. Of course we can not have a man to go down in the water and hold it down, and we have a lead that will weigh about 180 pounds, and after we set the seine and draw these lines together [illustrating] with these other lines on the water we hook the blocks on in that manner [indicating], and this weight goes down and leaves all that up there. That is a purse-net. When dropped for food fish they will find that opening [indicating] ninety-nine times in one hundred; they will almost always find that opening and go through that. Menhaden will strike against the seine in this manner [indicating]. The sharks destroy the nets and cut the fish right through the twine. The shark will come along and take the twine, fish and all in his mouth. I have taken twenty-four menhaden out of one shark. The lead does not go on the bottom; sometimes we just let it go down two or three fathoms or one fathom, but it does not make any difference if that does go on to the bottom; just as soon as the menhaden strike the seine they will raise the whole thing, lead and all. I have seen the lead come into the boat—come in oftener than anything else—come clear up to the top of the water.

Senator STANFORD. What is the depth of the net?

Mr. WILCOX. On the Jersey coast, in that shoal water, we usually rate it about 90 feet. This is the size of net we use.

Senator STANFORD. The lower part of the net is never down below 100 feet?

Mr. WILCOX. Very seldom, though we can fish in shoal water with them just as well occasionally. We will set the nets on rocks where there is a large school of fish. We will run the risk of getting the nets torn. We send a small boat to hold this up until we surround them, for when the fish strike it they will raise this [indicating] right up. In my experience of taking menhaden it is very rarely we get any food-fish. We do occasionally get a bluefish or something of that kind; but as a general thing the sand-bottom food fish does not inhabit the sand bottoms. Menhaden we get on sand bottoms.

Mr. D. T. CHURCH. I should like to have the net spread out once more to give an idea. That seine is 1,800 feet long in the water and 100

feet deep. There are, say, 300,000 fish in the water. When they start they start horizontally. Every fish starts horizontally to escape. When they strike they strike their noses in one of the meshes, and they are caught by the thousands. This acts with the power of a steam engine almost. The menhaden run horizontally and strike the mesh. All the edible fish, such as the weakfish and others, naturally go to the bottom for protection, and as they run down we haul the seine right over them. That is the actual fact, and that is the reason we do not catch any more edible fish.

Mr. WILCOX. I have seen the time when schools of fish would strike the seine, that we had to make this purse-twine fast.

Representative SKINNER. Did you ever in all your life see a sheeps-head caught in one of them?

Mr. WILCOX. I caught one once. That is all I ever caught. I have forgotten where it was, but I remember taking it. I am very curious to ask questions at times, and last fall I was off Seabright and one day the hook and line fishermen wanted bait. "Well," said I, "I understand that you are trying to get your Senators from this State to have a bill passed shoving us off and stopping our fishing altogether. I would not think you would come to us for bait in that case." They said to me, "Why, nothing of the kind. We have never signed for any such bill, and we do not want any such bill. We want you to come here to fish so as to catch bait for us." That was their statement. I do not know how many I asked, but I have talked with a great many of them down there in regard to that, and their statements to me were always—whether it has been through policy, thinking I would favor them in that way or not, I do not know—"We want you here so as to catch bait for us."

Senator DAWES. Do you think they come in in greater quantity for bait—that they gather the fish in there by your processes?

Mr. WILCOX. Do you mean whether the menhaden bring food fish in there any more?

Senator DAWES. Yes.

Mr. WILCOX. My experience has been that where bluefish are you will not find menhaden. The menhaden are to them the same as sheep would be to dogs. Wherever bluefish are you will not find menhaden if they can get away. The bluefish drive them right ashore.

Senator DAWES. Do the hook-and-line fishermen keep away from you?

Mr. WILCOX. Oh, we do not interfere at all; we do not clash.

Senator DAWES. They come around you?

Mr. WILCOX. Yes, sir; just as agreeable as can be.

Senator DAWES. What is the class of fishermen who are in favor of this bill?

Mr. WILCOX. I do not know who they are; that is something I do not know anything about. I have only talked with those whom I saw coming off there in boats. I had heard rumors that there was a feeling for such a bill among the fishermen. Those I talked with on the Jersey coast said what I have stated. If they saw us anywhere near in good weather they would come alongside.

Senator DAWES. So far as you know is it those who fish on dry land who are in favor of this bill?

Mr. WILCOX. That is my opinion. I honestly believe that to be the fact. I believe that the parties who complain are those who do not have any real interest in fishing.

Senator DAWES. You have observed the schools of menhaden that go north and the schools that go back south ?

Mr. WILCOX. Yes, sir.

Senator DAWES. Is there any appreciable difference ?

Mr. WILCOX. No ; but, if anything, the schools are larger, more compact, I think, when they go south in the fall than they are when they move north. I should like to say a word in regard to that. Sometimes we will take fish at Sandy Hook in the fall of the year, and will follow them down to the Capes of the Delaware, and they disappear ; that is the last we see of them ; we can not find traces of them below that. More especially, if they are heavy with spawn, they seem to disappear and go to sea.

Senator RANSOM. May I interrupt you ? Mr. Journey tells me that the menhaden go up the coast in the spring, swimming up by North Carolina in March and April very thin and very poor, and in September and October they return, as you say, heavy with spawn and very fat indeed.

Mr. WILCOX. Yes, sir.

Senator RANSOM. His impression was that they went on down the coast towards the Gulf, but your idea is that they go to sea.

Mr. WILCOX. For this reason, that very often we have followed these fish along to the Capes of the Delaware one night, and to-morrow we would expect they would be going southward, and we would expect to find them further southward 40 or 50 miles, but when we came to look for them, we could not find them or catch any trace of them.

Senator RANSOM. But Mr. Journey says they find them still in large quantities at Hatteras.

Mr. JURNEY. I have studied the matter a good deal, and when they first appear they appear to be coming up the coast from the south, of course ; they are the shad species, and look very much like shad, and live by suction, as the shad does, and they look just like a shad does after it has spawned—very thin and very poor. When caught then perhaps they will not yield more than half a gallon to a thousand. In the fall, when our people fish for them, in September and October, and later on about the first of November, they are exceedingly fat, and yield all the way from six to eight gallons of oil per thousand. It seems as if they were almost in a condition to spawn. Then the course of the menhaden is southward. My supposition is that they spawn somewhere off the Gulf of Mexico.

Mr. WILCOX. I have thought that these fish in the spring of the year did come from the south, but if they come from that way it is a very singular thing always in the spring of the year fishermen take them at Montauk (that is 110 miles east of Sandy Hook) before we get them at Sandy Hook.

Mr. JURNEY. They may follow the Gulf Stream.

Mr. WILCOX. Perhaps ; we do not know anything about them.

STATEMENT OF D. F. OVERTON, OF FAIRPORT, VA.

Mr. OVERTON. Mr. Chairman, I have been asked to appear here. I have no statement to make. I am willing to answer any questions that may be put to me. I am entirely unprepared to make any statement. I did not even know I was coming over until last night.

Senator RANSOM. Have you heard the statements made by these gentlemen in reference to the menhaden fishery, and are you acquainted with it, and would your general statement agree with theirs ?

Mr. OVERTON. Yes, sir ; their experience is mine.

The CHAIRMAN. How many people are interested in your vicinity in the menhaden business?

Mr. OVERTON. I can not answer that without some thought. I can say that there are about 25 nets; about 250 to 300 fishermen.

The CHAIRMAN. On a coast line how long?

Mr. OVERTON. That is in Virginia, south of the Potomac, 75 miles from the capes of Virginia. I am speaking of the Chesapeake Bay exclusively.

The CHAIRMAN. Within how many miles of coast line?

Mr. OVERTON. It is not on the coast line. On the bay we fish 30 miles either way, and in some instances we even go as far as the capes.

The CHAIRMAN. What would be the effect of this bill on that community?

Mr. OVERTON. It would be ruin entirely for me and a great many others situated as I am. Every dollar I have in the world is in the fish business. I am engaged in the food fishery and also in the menhaden fishery.

ADDITIONAL STATEMENT OF D. T. CHURCH.

Mr. D. T. CHURCH. In relation to the spawning, we can give our view of it. It was the generally received opinion in relation to the spawning of menhaden up to within four or five years ago, that they came full of spawn in the spring the same as other fish, but by investigating and taking evidence, by going and examining the fish for a number of years, we learn that the spawn in the menhaden are not found ripe until somewhere in October, November, or December, and when they disappear they disappear full of spawn and go into the open ocean, and that is the last seen of them in that condition. When they come back they are always empty of spawn, about the middle of next summer, in May or June. You will see in the open sea any amount of little menhaden. The evidence goes to show that the menhaden spawn in the open sea in the winter time.

Then there was another point you asked me that I did not quite apprehend in relation to the jurisdiction of the States in regard to this fishery. I will call your attention to the fact that in the treaty with Great Britain made in 1871 we gave to British subjects the right to come into any river, bay, or inlet of the United States. Now, if the United States had that right in relation to a subject of Great Britain, of course we have it.

Senator SEWELL. We gave them the same rights we gave our own citizens.

REPORT

OF THE

NATIONAL ACADEMY OF SCIENCES

FOR

THE YEAR 1889.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.

1891.

LETTER OF TRANSMITTAL.

NATIONAL ACADEMY OF SCIENCES,
Washington, D. C., February 25, 1890.

SIR: In conformity with the requirements of the act of incorporation approved March 3, 1863, I have the honor to submit herewith a report of the operations of the National Academy of Sciences during the past year.

Very respectfully,

O. C. MARSH,

President of the National Academy of Sciences.

The PRESIDENT OF THE SENATE.

REPORT OF THE NATIONAL ACADEMY OF SCIENCES.

The National Academy of Sciences was established by act of Congress in March, 1863, with power to frame its own constitution, select its own members, and provide in other respects for its continuance and successful operation.

The object of the Academy is to advance science, and especially to investigate, examine, experiment, and report on any subject of science or art whenever called upon by any department of the Government.

The Academy contains at present about 100 members, and these have all been selected for their original researches in science. They represent within their ranks nearly every department of knowledge, and their services, in accordance with the charter of the Academy, are always at the disposal of the Government, without compensation.

SESSIONS OF THE NATIONAL ACADEMY.

During the past year, the Academy has held three sessions. The first was the regular annual meeting held in Washington, D. C., April 16 to 19, 1889; the second was a scientific session, in Philadelphia, November 12 to 14, 1889, and the third was a special session in Philadelphia, November 13, 1889.

STATED SESSION.

HELD IN WASHINGTON CITY, APRIL 16 TO 19, 1889.

The Washington session was held in the National Museum, the president, Prof. O. C. Marsh, presiding.

The following members were present during the session:

Abbe.	Cook, G. H.	Hilgard.	Newcomb.
Abbot.	Cope.	Hill, G. W.	Peirce.
Allen.	Dutton.	Hyatt.	Peters.
Barker.	Ferrel.	Langley.	Powell.
Bell.	Gibbs, W.	Marsh.	Pumpelly.
Billings.	Gilbert.	Mayer.	Putnam.
Brewer.	Gill.	Meigs.	Remsen.
Brooks.	Goode.	Mendenhall.	Rowland.
Brush.	Gould.	Michelson.	Schott.
Chandler, S. C.	Hague.	Mitchell, S. W.	Walker.
Coffin.	Hall, A.	Morton.	Wood.
Comstock.	Hall, J.	Newberry.	Wright.

At this session the following papers were read and discussed:

1. PEIRCE, C. S.: On Sensations of Color.
2. GIBBS, W., and HARE, H. H.: Notice on the Method and Results of a Systematic Study of the Action of Definitely Related Chemical Compounds upon Animals. (Read by Dr. Hare.)
3. COPE, E. D.: On the Pliocene Vertebrate Fauna of Western North America. Discussed by Messrs. Gilbert and Cope.
4. TODD, D. P.; presented by S. Newcomb: On Composite Coronagraphy. Discussed by Messrs. Langley and Peters.
5. PEIRCE, C. S.: On Determinations of Gravity.
6. COPE, E. D.: On the North American Proboscidea.
7. HALL, A., Jr.; presented by G. J. Brush: On the Mass of Saturn. Discussed by Messrs. A. Hall, G. W. Hill, Peters, and Newcomb.
8. REMSEN, IRA: On the Rate of Reduction of Nitro-compounds.
9. REMSEN, IRA: On Some Connection between Taste and Chemical Composition.
10. MENDENHALL, T. C.: Recent Researches in Atmospheric Electricity. Discussed by General Greely.
11. MICHELSON, A. A.: Measurement by Light Waves. Discussed by Mr. Rowland.
12. ROGERS, W. A.: Additional Experimental Proof that the Relative Coefficient of Expansion between Baily's Metal and Steel is Constant between the Limits Zero and Ninety-five Degrees Fahr. (Read by title.)
13. MICHELSON, A. A., and MORLEY, E. W.: On the Feasibility of the Establishment of a Light-wave as the Ultimate Standard of Length. Discussed by Messrs. Peirce, Rowland, and Michelson.
14. CHANDLER, S. C.: On the General Laws pertaining to Stellar Variations. Discussed by Messrs. Gould, G. W. Hill, Newcomb, Chandler, and Peters.
15. PETERS, C. H. F.: Review of the Trivial Names in Piazzzi's Star Catalogue.
16. NEWBERRY, J. S.: On Cretaceous Flora of North America. Discussed by Messrs. Cope and Newberry.

23. BROOKS, W. K.: Development of Crustacea. (Read by title.)

ELECTIONS.

The election of officers, for a term of 6 years, took place on Wednesday, April 17, 1889, and resulted as follows:

President, Prof. O. C. MARSH.

Vice-President, Prof. S. P. LANGLEY.

Home Secretary, Prof. ASAPH HALL.

The following members were selected for the council for the ensuing year: Messrs. G. J. Brush, B. A. Gould, M. C. Meigs, S. Newcomb, Ira Remsen, and F. A. Walker.

RECOMMENDATIONS FROM THE COUNCIL.

The following recommendations from the council were adopted by the Academy:

1. That the assessment for the ensuing year be \$5.
2. That the proposed changes in the deeds of trust of the Draper and Smith funds, authorized by the resolution adopted last year, be indefinitely postponed.

HOME SECRETARY'S REPORT.

The home secretary submitted the following report for the past year:

April 16, 1889.

The current business of the Academy has been carried on as in former years.

The printing of the memoirs has made some progress. Part I of Vol. IV has been printed, but owing to delay in getting the plates only one hundred and seventy-seven copies were delivered to the Academy. These have been nearly all distributed to members and foreign associates. The printing of Part II of Vol. IV has not been begun on account of delay with the drawings. The drawings are now completed, and the printing of Part II will begin soon.

In accordance with the direction of the council, the printing of the third volume of biographical memoirs was begun a year ago, and the memoirs of William B. Rogers, Edward Tuckerman, Edward B. Hunt, James C. Watson, and James B. Eads, have been printed. These memoirs make seventy-nine pages of print. Five hundred copies have been struck off, and are held by the printers, Judd & Detweiler, until the volume is completed.

The annual of the Academy referred to in Rule XII has been understood to mean the constitution, rules, and list of members, and has been issued each year. The cost of printing and distributing this annual is about \$40 a year. The publication of this matter again in the annual report of the president has been thought by some of the members to render the annual unnecessary, but the secretary has not thought himself at liberty to discontinue it.

REPORTS OF COMMITTEES.

Mr. Gibbs, for the committee on the election of foreign associates, submitted a report recommending the election of Lieut. Gen. Don Carlos Ibañez, director of the Geodetic Survey and the Census of Spain, and president of the international committee of weights and measures. The foreign secretary was authorized to cast the vote of the Academy for that gentleman, who was declared elected.

At Mr. Langley's request, the committee on reserving public lands on and near Mount Whitney, California, for scientific purposes, was continued.

The home secretary, for the committee on publication, made a statement concerning the printing of the memoirs, and expressed the hope that the style of printing might be improved in the future.

Mr. Gill, representing the committee on publications of the Academy, reported progress.

The president and Mr. Coffin made statements concerning the action of the committee on the relation of the Academy to the Government.

The board of direction of the Bache fund presented a report, which was read by Mr. Gibbs and accepted. (See Appendix D, p. 37.)

Mr. Newcomb submitted the report of the board of trustees of the Watson fund. This report was accepted. (See Appendix D, p. 48.)

THE JAMES WATSON MEDAL.

At a public session of the Academy, held on the evening of April 17, 1889, the second James Watson gold medal and the sum of \$100 in gold were presented to Prof. Edward Schönfeld, director of the Bonn Observatory, Germany.

At the same session, a biographical memoir of the late Prof. Spencer F. Baird was read by Dr. Billings.

NEW MEMBERS.

At this meeting, the following new members were elected: Prof. Lewis Boss, Prof. Charles S. Hastings, Prof. Arthur Michael, Prof. Sereno Watson, and Prof. Charles A. White.

NEW FOREIGN ASSOCIATE.

Lieut. Gen. Don Carlos Ibañez, of Madrid, Spain, was elected foreign associate of the Academy.

TREASURER'S REPORT.

WASHINGTON, D. C., *April 16, 1889.*

SIR: The committee appointed to audit the treasurer's accounts and to compare them with the report made by the committee upon the securities held by the Academy respectfully report that they have examined the books and the accounts of the treasurer, and that they have compared the vouchers with the disbursements reported, and have compared the receipts with the record of dues received from members and with the record of interest received from invested funds of the Academy, and find the same to be correct.

IRA REMSEN.
S. C. CHANDLER.
G. W. HILL.
Committee.

To the PRESIDENT OF THE NATIONAL ACADEMY OF SCIENCES.

REPORT.

SIR: I have the honor to transmit herewith my financial report as treasurer of the National Academy of Sciences.

1. *General fund.*

Balance brought forward from April 17, 1888	\$213. 56
Received during year	503. 26
Total to be accounted for	\$716. 82
Disbursements during year	306. 05
Balance cash on hand	410. 77
Available balances = *\$377.77 + \$500 in 3.65 bonds.	

2. *Bache fund.*

Balance brought forward from April 17, 1888	\$1, 648. 82
Received during year	†3, 985. 73
Total to be accounted for	\$5, 634. 55
Disbursements during year	2, 133. 60
Balance cash on hand	3, 500. 95
Available balance = ‡ \$11.05.	

3. *Watson fund.*

Balance brought forward from April 17, 1888	\$2, 197. 05
Received during year	836. 74
Total to be accounted for	\$3, 033. 79.
Disbursements during year	†2, 735. 40
Balance cash on hand	298. 39
Available balances = § \$198.39 + \$1,500 in 3.65 bonds.	

4. *Draper fund.*

Balance brought forward from April 17, 1888	\$565. 64
Received during the year	200. 00
Total to be accounted for	765. 64
Disbursements during the year	35. 33
Balance cash on hand	740. 31
Available balances = \$480.31 + \$260 reserve.	

* \$33 due secretary from general fund.

† Includes transfer of \$1,500 District of Columbia 3.65 bonds to Watson fund.

‡ \$36 due Bache fund from Philadelphia City bond.

§ 100 due to accompany Watson medal.

10 REPORT OF THE NATIONAL ACADEMY OF SCIENCES, 1889.

5. *Smith fund.*

Balance brought forward from April 17, 1888	\$939. 10
Received during year	324. 00
Total to be accounted for.....	\$1, 263. 10
Disbursements during year	25. 32

Balance cash on hand 1, 237. 78

Available balances = \$705.78 + \$532 reserve.

A detailed account current, with vouchers, is herewith submitted.

Very respectfully,

J. W. BILLINGS,

Treasurer, National Academy of Sciences.

To the PRESIDENT OF THE NATIONAL ACADEMY OF SCIENCES.

REPORT ON SECURITIES.

The following report of the committee to examine securities held by the Academy was read and approved:

WASHINGTON, D. C., *April 16, 1889.*

SIR: The committee appointed to inspect and verify the bonds and securities and other property of the National Academy begs leave to report that it has performed that duty on April 11, 1889.

The bonds and securities of the Academy at present deposited by its treasurer at the Washington Safe Deposit Company's office, 916 Pennsylvania avenue, were inspected and verified individually, and were found to correspond to the list in the treasurer's book.

1. *Bache trust fund.*

United States 4½ per cent. registered bonds	\$42, 100
United States 4 per cent. registered bonds	3, 850
City of Davenport 6 per cent. loan	1, 000
City of Philadelphia 6 per cent. loan	600
Total Bache fund	\$47, 550

Also, land warrant No. 62740 for 160 acres of land in Missouri.

2. *Joseph Henry fund.*

An agreement with the Pennsylvania company for insurance on lives and granting annuities as to the final disposition of the Joseph Henry fund of \$40,000.

3. *Watson trust fund.*

United States 4½ per cent. registered bonds	\$6, 200
United States 4 per cent. registered bonds	850
Certificates of stock of Michigan Mutual Life Insurance Company...	6, 700
Total Watson fund	13, 750

4. *Henry Draper medal fund.*

United States 4 per cent registered bonds	5, 000
---	--------

Also, a deed of trust of Mary Anna Palmer Draper, giving \$6,000 to the Academy.

5. *J. Lawrence Smith medal fund.*

United States 4½ per cent. registered bonds \$7,200
 Also a deed of trust of Sarah Julia Smith, giving \$8,000 to the Academy.

6. *Income of the Bache and general fund.*

District of Columbia 3.65 bonds 2,000
 Of this, \$1,500 belongs to the income of the Watson fund, and \$500 to the income of the general fund.

Total of securities held by the Academy 75,500

For the convenience of the auditing committee, a detailed statement of every bond and security, as found by your committee, is herewith inclosed.

Respectfully submitted by,

CHARLES A. SCHOTT.

THEODORE N. GILL.

Committee.

To the PRESIDENT OF THE NATIONAL ACADEMY OF SCIENCES.

ADDRESS BY THE PRESIDENT.

The president made a short address, in which he spoke of the policy of the Academy, its relations to the Government in the past, and the proper action for the future.

DEATH OF MEMBERS.

The president announced the death of Dr. J. C. Dalton, who died February 2, 1889.

Dr. S. Weir Mitchell was appointed to prepare a biographical notice.

The president also announced the death of two foreign associates, Dr. R. Clausius, of Bonn, and Professor Chevreul, of Paris.

INVITATIONS.

The members of the Academy were invited to attend the meeting of the Anthropological Society, Tuesday evening, April 16.

The President of the United States received the members of the Academy, Wednesday, April 17, at 12 o'clock.

The Secretary of the Smithsonian Institution extended an invitation to each member of the Academy and family to attend a reception at the Institution on Thursday evening, April 18, at half past 8 o'clock.

The hospitalities of the Cosmos Club were extended to the members of the Academy during their stay in Washington.

The Academy adjourned April 19, to meet in Philadelphia, November 12, 1889.

SCIENTIFIC SESSION.

HELD IN PHILADELPHIA, NOVEMBER 12 TO 14, 1889.

A scientific session, for the reading of papers only, having been called by the council, as announced at the April meeting, the Academy met at the University of Pennsylvania, Philadelphia, on November 12, 1889.

The president, Prof. O. C. Marsh, presided at this meeting.

The following members were present during the session :

Barker.	Gill.	Mendenhall.	Rood.
Billings.	Gould.	Michael.	Rowland.
Brewer.	Hall, A.	Michelson.	Sellers.
Brooks.	Hall, J.	Mitchell, S. W.	Wood.
Chandler, C. F.	Langley.	Newberry.	Wright.
Cope.	Leidy.	Newcomb.	Young.
Gibbs, W.	Lesley.	Powell.	
Gilbert.	Marsh.	Pumpelly.	

The following papers were read and discussed :

1. LANGLEY, S. P. : On the Economy of Energy in the Glow-worm. Discussed by Messrs. W. Gibbs, Langley, Barker, C. F. Chandler, and Rood.
2. ROOD, O. N. : On Photometry of Colored Light. Discussed by Messrs. Langley, Young, and Rood.
3. GIBBS, W. : On certain Pyrophosphates. Discussed by Mr. Barker.
4. COPE, E. D. : On the Vertebrata of the Miocene of the Cypress Hills of Canada.
5. HALL, A. : On Saturn and its Rings. Discussed by Messrs. Rood, Gibbs, Young, Langley, and Hall.
6. GIBBS, W., and HARE, H. H. : On the Results of the Systematic Study of the Action of Definitely related Chemical Compounds upon Animals. (Read by Dr. Hare.) Discussed by Mr. Gibbs.
7. BARKER, G. F. : On Zinc Storage Batteries. Discussed by Mr. C. F. Chandler.
8. MICHELSON, A. A. : On Relative Wave-lengths. Discussed by Messrs. Rowland, Gould, and Michelson.
9. PICKERING, E. C. : On the Spectrum of Zeta Ursæ Majoris. (Read by Mr. G. F. Barker.)
10. RYDER, J. A. ; presented by T. Gill : On the Persistence and Meaning of the Bi-concave centrum of the Vertebrae of Vertebrates. Discussed by Messrs. Gill and Ryder and the President.
11. BROOKS, W. K. : On the Early Stages of Echinoderms. Discussed by Messrs. Gill and Brooks.
12. GILL, T. : On a Peculiar Ordinal Modification as Exemplified by Fishes of the Family Halisauridæ.
13. GOULD, B. A. : On the New Prototypes of the Kilogramme and the Metre. Discussed by Messrs. Newcomb, Rowland, and Gould.
14. HALL, J. : Remarks upon the Present State of our Knowledge in Reference to a Revision of the Genera of Brachiopoda for the Palæontology of New York, Vol. VIII.
15. BREWER, W. H. : On the Heredity of Acquired Characters. Discussed by Messrs. Wood, Brooks, Powell, Brewer, Gill, and Ryder.
16. MICHAEL, A. : On the "Positive-negative" Hypothesis in its Application to Organic Chemistry.
17. NEWCOMB, S. : On the Results of the Transits of Venus observed in 1761 and 1769.
18. NEWCOMB, S. : On the Theory of Cosmical Temperature. Discussed by Mr. W. Gibbs.

19. POWELL, J. W.: On the Desert Ranges.
20. WOOD, H. C.: On Hypnotic Cases without Suggestion. Discussed by Messrs. Newcomb and Wood.
21. NEWBERRY, J. S.: On the Laramie Group. Discussed by Messrs. Powell and Newberry.
22. MARSH, O. C.: On the Skull of the Gigantic *Ceratopsidæ*. Discussed by Mr. Newberry.
23. MARSH, O. C.: On American Mesozoic Mammals. Discussed by Messrs. Gill and Marsh.

DEATH OF MEMBERS.

The president announced the deaths of Prof. F. A. P. Barnard, Prof. George H. Cook, Prof. Elias Loomis, and Prof. Leo Lesquereux, and appointed Prof. O. N. Rood, Prof. J. S. Newberry, Prof. H. A. Newton, and Prof. J. Peter Lesley, respectively, to prepare the biographical notices.

The president also announced the death of Mr. James P. Joule, of England, a foreign associate of the Academy.

Notice was given by the president that memoirs for the next volume, ready for publication must be sent in by December 1, 1889.

The scientific session then adjourned to meet in Washington on the third Tuesday in April, 1890.

SPECIAL SESSION.

HELD IN PHILADELPHIA, NOVEMBER 13, 1889.

A special session of the Academy having been called by the council, in accordance with Article III, section 1, of the constitution, the Academy met at the University of Pennsylvania, Philadelphia, November 13, 1889, the president, Prof. O. C. Marsh, presiding.

The president laid before the Academy the purpose of the present business session, which was the consideration of his annual report to Congress. He said that this report would contain both the deeds of gift and an account of the grants made from the trust funds of the Academy since these funds were received.

RECOMMENDATIONS.

The home secretary read the recommendation of the council that the president's annual report be approved by the Academy, and that the president be authorized to include in this report the proceedings of the present meeting, as well as those of the last April session.

This recommendation was adopted by the Academy.

Mr. George F. Barker presented the following recommendation of the committee on the Henry Draper medal:

The committee on the Henry Draper medal recommend to the National Academy of Sciences the award of the Henry Draper medal to Prof. Henry A. Rowland, of Baltimore, for his researches on the solar spectrum.

This recommendation was adopted by the Academy.

NOMINATIONS.

Five nominations for membership in the Academy were read by the home secretary. These will be acted on at the April meeting, 1890.

RESOLUTIONS.

Mr. W. Gibbs presented the following resolutions, which were adopted by the Academy:

Resolved, That the Academy tender to the provost, trustees, and faculty of the University of Pennsylvania their grateful acknowledgments for the abounding hospitality with which they have been received, and for the ample facilities provided for their meetings.

Resolved, That the Academy cordially thank the Historical Society of Pennsylvania for the reception so gracefully offered, and which afforded the Academy an opportunity to make the acquaintance of the members of one of the most distinguished historical associations in our country.

The special session then adjourned.

Respectfully submitted.

O. C. MARSH,
President of the National Academy of Sciences.

APPENDICES.

APPENDIX A.

AN ACT to incorporate the National Academy of Sciences.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Louis Agassiz, Massachusetts; J. H. Alexander, Maryland; S. Alexander, New Jersey; A. D. Bache, at large; F. A. P. Barnard, at large; J. G. Barnard, United States Army, Massachusetts; W. H. C. Bartlett, United States Military Academy, Missouri; U. A. Boyden, Massachusetts; Alexis Caswell, Rhode Island; William Chauvenet, Missouri; J. H. C. Coffin, United States Naval Academy, Maine; J. A. Dahlgren, United States Navy, Pennsylvania; J. D. Dana, Connecticut; Charles H. Davis, United States Navy, Massachusetts; George Engelmann, Saint Louis, Mo.; J. F. Frazer, Pennsylvania; Wolcott Gibbs, New York; J. M. Gilliss, United States Navy, District of Columbia; A. A. Gould, Massachusetts; B. A. Gould, Massachusetts; Asa Gray, Massachusetts; A. Guyot, New Jersey; James Hall, New York; Joseph Henry, at large; J. E. Hilgard, at large, Illinois; Edward Hitchcock, Massachusetts; J. S. Hubbard, United States Naval Observatory, Connecticut; A. A. Humphreys, United States Army, Pennsylvania; J. L. LeConte, United States Army, Pennsylvania; J. Leidy, Pennsylvania; J. P. Lesley, Pennsylvania; M. F. Longstreth, Pennsylvania; D. H. Mahan, United States Military Academy, Virginia; J. S. Newberry, Ohio; H. A. Newton, Connecticut; Benjamin Pierce, Massachusetts; John Rodgers, United States Navy, Indiana; Fairman Rogers, Pennsylvania; R. E. Rogers, Pennsylvania; W. B. Rogers, Massachusetts; L. M. Rutherford, New York; Joseph Saxton, at large; Benjamin Silliman, Connecticut; Benjamin Silliman, junior, Connecticut; Theodore Strong, New Jersey; John Torrey, New York; J. G. Totten, United States Army, Connecticut; Joseph Winlock, United States Nautical Almanac, Kentucky; Jeffries Wyman, Massachusetts; J. D. Whitney, California; their associates and successors duly chosen, are hereby incorporated, constituted, and declared to be a body corporate, by the name of the National Academy of Sciences.

SEC. 2. *And be it further enacted,* That the National Academy of Sciences shall consist of not more than fifty ordinary members, and the said corporation hereby constituted shall have power to make its own

organization, including its constitution, by-laws, and rules and regulations; to fill all vacancies created by death, resignation, or otherwise; to provide for the election of foreign and domestic members, the division into classes, and all other matters needful or usual in such institution, and to report the same to Congress.

SEC. 3. *And be it further enacted*, That the National Academy of Sciences shall hold an annual meeting at such place in the United States as may be designated, and the Academy shall, whenever called upon by any Department of the Government, investigate, examine, experiment, and report upon any subject of science or art, the actual expense of such investigations, examinations, experiments, and reports to be paid from appropriations which may be made for the purpose, but the Academy shall receive no compensation whatever for any services to the Government of the United States.

Approved, March 3, 1863.

AN ACT to amend the act to incorporate the National Academy of Sciences.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the act to incorporate the National Academy of Sciences, approved March three, eighteen hundred and sixty-three, be, and the same is hereby, so amended as to remove the limitation of the number of ordinary members of said Academy as provided in said act.

Approved, July 14, 1870.

DEPARTMENT OF STATE, *June 10, 1882.*

True copies.

SEVELLON A. BROWN,
Chief Clerk.

AN ACT to authorize the National Academy of Sciences to receive and hold trust funds for the promotion of science, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the National Academy of Sciences, incorporated by the act of Congress approved March third, eighteen hundred and sixty-three, and its several supplements, be, and the same is hereby, authorized and empowered to receive bequests and donations, and hold the same in trust, to be applied by the said Academy in aid of scientific investigations, and according to the will of the donors.

Approved, June 20, 1884.

DEPARTMENT OF STATE, *June 24, 1884.*

A true copy.

SEVELLON A. BROWN,
Chief Clerk.

APPENDIX B.

CONSTITUTION AND RULES OF THE NATIONAL ACADEMY OF SCIENCES.

As amended and adopted April 17, 1872, and further amended April 20, 1875, April 21, 1881, April 19, 1882, April 18, 1883, and April 19, 1888.

PREAMBLE.

Empowered by the act of incorporation enacted by Congress, and approved by the President of the United States, on the 3d day of March, A. D. 1863, and in conformity with the amendment to said act, approved July 14, 1870, the National Academy of Sciences adopts the following amended constitution and rules:

ARTICLE 1.—OF MEMBERS.

SEC. 1. The Academy shall consist of members, honorary members, and foreign associates. Members must be citizens of the United States.

SEC. 2. Members who, from age or inability to attend the sessions of the Academy, wish to resign the duties of active membership, may, at their own request, be transferred to the roll of honorary members by a vote of the Academy.

SEC. 3. The Academy may elect fifty foreign associates.

SEC. 4. Honorary members and foreign associates shall have the privilege of attending the meetings, and of reading and communicating papers to the Academy, but shall take no part in its business, shall not be subject to its assessments, and shall be entitled to a copy of the publications of the Academy.

ARTICLE II.—OF THE OFFICERS.

SEC. 1. The officers of the Academy shall be a president, a vice-president, a foreign secretary, a home secretary, and a treasurer, all of whom shall be elected for a term of six years, by a majority of votes present, at the first stated session after the expiration of the current terms, provided that existing officers retain their places until their successors are elected. In case of a vacancy, the election for six years shall be held in the same manner at the session when such vacancy occurs, or at the next stated session thereafter, as the Academy may direct. A vacancy in the office of treasurer or home secretary may, however, be filled by appointment of the president of the Academy until the next stated session of the Academy.

SEC. 2. The officers of the Academy, together with six members to be elected by the Academy at the first stated session in each year, shall constitute a council for the transaction of such business as may be assigned to them by the constitution of the Academy.

SEC. 3. The president of the Academy, or, in case of his absence or inability to act, the vice-president, shall preside at the meetings of the Academy and of the council; shall name all committees except such as are otherwise especially provided for; shall refer investigations required by the Government of the United States to members especially conversant with the subjects, and report thereon to the Academy at its session next ensuing; and, with the council, shall direct the general business of the Academy.

It shall be competent for the president, in special cases, to call in the aid, upon committees, of experts or men of special attainments, not members of the Academy.

SEC. 4. The foreign and home secretaries shall conduct the correspondence proper to their respective departments, advising with the president and council in cases of doubt, and reporting their action to the Academy at one of the stated sessions in each year.

It shall be the duty of the home secretary to give notice to the members of the place and time of all meetings, of all nominations for membership, and of all proposed amendments to the constitution.

The minutes of each session shall be duly engrossed before the next stated session, under the direction of the home secretary.

SEC. 5. The treasurer shall attend to all receipts and disbursements of the Academy, giving such bond and furnishing such vouchers as the council may require. He shall collect all dues from members, and keep a set of books showing a full account of receipts and disbursements. He shall present a general report at the April session. He shall be the custodian of the corporate seal of the Academy.

ARTICLE III.—OF THE MEETINGS.

SEC. 1. The Academy shall hold one stated session in each year, in the city of Washington, on the third Tuesday in April, and another may be held at such place and time as the council shall determine.

Special sessions of the Academy may be called, by order of eight members of the council, at such place and time as may be designated in the call.

Scientific sessions of the Academy may be held at times and places to be designated by a majority of the council.

SEC. 2. The names of the members present at each daily meeting shall be recorded in the minutes; and the members present at any meeting shall constitute a quorum for the transaction of business.

SEC. 3. Scientific meetings of the Academy, unless otherwise ordered by a majority of the members present, shall be open to the public; those for the transaction of business, closed.

SEC. 4. The stated meetings of the council shall be held during the stated or special sessions of the Academy. Special meetings may be convened at the call of the president and two members of the council, or of four members of the council.

SEC. 5. No member who has not paid his dues shall take part in the business of the Academy.

ARTICLE IV.—OF ELECTIONS AND RESIGNATIONS.

SEC. 1. All elections shall be by ballot, and each election shall be held separately, unless otherwise ordered by this constitution.

SEC. 2. The time for holding an election for officers shall be fixed by the Academy at least one day before the election is held.

SEC. 3. The six additional members of the council shall be elected on any day after the first of the first stated session in each year, by each voter inscribing six names on his ballot, and those six who have received more votes than any others shall be declared elected. If two or more names have received the lowest number of votes that would elect, additional balloting shall be had for as many members as remain each time to be elected until the number is full.

The term of the members so elected shall commence at the close of the session at which they are elected, and continue until the close of the first stated session in the next year.

SEC. 4. Nominations of members may be made in writing, signed by any five members of the Academy, at any stated session, to be voted on at the next stated session held in Washington, and each nomination shall, at the time of election, be accompanied by a written list of the original works of the nominee.

SEC. 5. Elections for membership shall be held in the following manner: Each member may inscribe on a ballot not more than five names of nominees selected from the list. Absent members may send such ballots to the home secretary. From the seven names receiving the highest number of votes in this preference ballot, the members present may proceed to elect new members in the following manner: At each ballot, each member present may vote for not exceeding three persons, and the person receiving the highest number of votes shall be declared elected, provided that he received two-thirds of the votes cast and that his name appear on not less than twenty ballots; and provided further, that the number of members of the Academy be not already one hundred or over, in which case to be declared to be elected he must receive four-fifths of the votes cast, and his name must appear on at least twenty-five ballots.

Should several candidates have the same minimum number of votes on the preference list, the requisite number for completing the list shall be selected from them by a two-thirds vote of the members present.

Election of members shall be held only at the regular stated session of each year held in Washington, and not more than five members shall be elected at that session.

Before and during elections, a discussion of the merits of nominees will be in order.

The election of members may be suspended at any time by a majority vote of the members present.

SEC. 6. Every member elect shall accept his membership, personally or in writing, before the close of the next stated session after the date of his election. Otherwise, on proof that the secretary has formally notified him of his election, his name shall not be entered on the roll of members.

SEC. 7. Foreign associates may be nominated by a committee of five members to be appointed for that purpose by the president, and elected at any stated session by a two-thirds vote of the members present. The election shall be had by each member indicating on a ballot those names for which he votes, and those nominees whose names appear on two-thirds of the ballots shall be declared elected.

SEC. 8. A diploma, with the corporate seal of the Academy and the signatures of the officers, shall be sent by the appropriate secretary to each member on his acceptance of his membership, and to foreign associates on their election.

SEC. 9. Resignations shall be addressed to the president and acted on by the Academy.

ARTICLE V.—OF SCIENTIFIC COMMUNICATIONS, PUBLICATIONS, AND REPORTS.

SEC. 1. Communications on scientific subjects shall be read at scientific meetings of the Academy, and papers by any member may be read by the author, or by any other member, notice of the same having been previously given to the secretary.

SEC. 2. Any member of the Academy may read a paper from a person who is not a member, and shall not be considered responsible for the facts or opinions expressed by the author, but shall be held responsible for the propriety of the paper.

Persons who are not members may read papers on invitation of the president, with the advice of the council.

SEC. 3. The Academy may provide for the publication, under the direction of the council, of proceedings, memoirs, and reports.

SEC. 4. Propositions for investigations or reports by the Academy shall be submitted to the council for approval, except those requested by the Government of the United States, which shall be acted on by the president, who will in such cases report their results to the Government as soon as obtained, and to the Academy at its next following stated session.

SEC. 5. The advice of the Academy shall be, at all times, at the disposition of the Government, upon any matter of science or art within its scope.

SEC. 6. An annual report to be presented to Congress shall be prepared by the president, and before its presentation submitted by him, first to the council, and afterwards to the Academy, at one of the stated sessions.

SEC. 7. Medals and prizes may be established, and the means of bestowing them accepted by the Academy, upon the recommendation of the council, by whom all the necessary arrangements for their establishment and award shall be made.

Bequests and trusts having for their object the advancement of science may also be accepted and administered by the Academy.

ARTICLE VI.—OF THE PROPERTY OF THE ACADEMY.

SEC. 1. All investments shall be made by the treasurer, in the corporate name of the Academy, in stocks of the United States.

SEC. 2. No contract shall be binding upon the Academy which has not been first approved by the council.

SEC. 3. The assessments required for the support of the Academy shall be fixed by the Academy on the recommendation of the council.

ARTICLE VII.—OF ADDITIONS AND AMENDMENTS.

Additions and amendments to the constitution shall be made only at a stated session of the Academy. Notice of a proposition for such a change must be given at a stated session, and shall be referred to the council, which may amend the proposition, and shall report thereon to the Academy at the same session. Its report shall be considered by the Academy in committee of the whole for amendment.

The proposition as amended, if adopted in committee of the whole, shall be voted on at the next stated session, and if it receives two-thirds of the votes cast, it shall be declared adopted.

Absent members may send their votes on pending changes in the constitution to the home secretary in writing, and such votes shall be counted as if the member were present.

RULES.

I. In the absence of any officer, a member shall be chosen to perform his duties temporarily, by a plurality of *viva voce* votes upon open nominations.

II. On the first day of each stated session, immediately after calling the roll of members, a recording secretary shall be elected by a plurality of members present, to assist the home secretary in keeping the records of the session.

III. The accounts of the treasurer shall be referred to an auditing committee of three members, to be appointed by the president at the meeting at which the accounts are presented; which committee shall report before the close of that session, and shall then be discharged.

The bonds, securities, and other property owned or held in trust by the Academy shall be inspected and verified by a committee to be annually appointed by the president. The report of this committee shall be presented to the Academy at its first stated session in each year, and referred with the accounts to the auditing committee.

IV. A committee of arrangements consisting of five members shall be appointed by the president for each stated session of the Academy. This committee shall meet not less than two weeks previous to each session. It shall be in session during the meetings to make arrangements for the reception of the members; to arrange the business of each day; to receive the titles of papers, reports, etc.; and to arrange the order of reading, and, in general, to attend to all business and scientific arrangements.

It shall be the duty of the committee of arrangements to fix the length of time to be devoted to reading of all papers submitted, and to limit the time to be occupied in their discussion.

V. At the meetings the order of business shall be as follows :

1. Chair taken by the president, or, in his absence, by the vice-president.

2. Roll of members called by home secretary.

3. Minutes of the preceding meeting read and approved.

4. Stated business.

5. Reports of president, secretaries, treasurer, and committees.

6. Business from council.

7. Other business.

8. On the last day of the session the rough minutes of that day's proceedings are to be read for correction.

VI. The rules of order of the Academy shall be those of the Senate of the United States, unless suspended by unanimous consent.

VII. Unless otherwise ordered by the Academy, the scientific meetings shall be convened at noon.

VIII. The death of members shall be announced by the president on the last day of any session, when a member shall be selected by the president to furnish a biographical notice of the deceased at the next stated session. If such notice be not then furnished, another member may be selected by the president in place of the first, and so on until the duty is performed.

IX. The secretaries will receive memoirs at any time, and report the date of their reception at the next session. But no memoir shall be published unless it has been read before the Academy.

X. Memoirs shall date in the records of the Academy from the date of their presentation to the Academy, and the order of their presentation shall be that in which they were registered, unless changed by consent of the author.

XI. Papers from persons not members read before the Academy and intended for publication shall be referred, at the meeting at which they

are read, to a committee of members competent to judge whether the paper is worthy of publication. Such committee shall report to the Academy as early as practicable, and not later than the next stated session.

XII. An annual of the Academy shall be prepared and published by the secretaries.

XIII. The printing of the Academy shall be under the charge of the committee of publication, to consist of the home secretary and four other members to be named by the president with the advice and consent of the council.

XIV. The annual report of the Academy may be accompanied by a memorial to Congress in regard to such investigations and other subjects as may be deemed advisable, recommending appropriations therefor when necessary.

XV. The proper secretary shall acknowledge all donations made to the Academy, and shall report them at the next stated session.

XVI. The books, apparatus, archives, and other collections of the Academy shall be deposited in some safe place in the city of Washington. A list of the articles so deposited shall be kept by the home secretary, who is authorized to employ a clerk to take charge of them.

XVII. A stamp corresponding to the corporate seal of the Academy shall be kept by the secretaries, who shall be responsible for the due marking of all books and other objects to which it is applicable.

Labels or other proper marks of similar device shall be placed upon objects not admitting of the stamp.

XVIII. The treasurer is authorized to defray, when approved by the president, all the proper expenses of committees appointed to make scientific investigations at the request of Departments of the Government, and in each case to look to the Department requesting the investigation for reimbursement to the Academy.

XIX. Nominations for membership should state the full name, residence, the official position, and the special scientific studies of the candidate. A form of nomination shall be prepared by the home secretary.

XX. At least 60 days before the election, the members signing the nomination should furnish the home secretary with a sufficient number of printed copies of a list of the more important original works of the nominee to enable the secretary to furnish a copy to each member of the Academy.

XXI. Ballots for election of members may be sent by sealing them up in a blank envelope, and inclosing this in another, across the back of which is written the name of the sender, and which is addressed to the home secretary; such envelopes will be opened only by the tellers.

XXII. All discussions as to the claims and qualifications of nominees at meetings of the Academy will be held strictly confidential, and remarks and criticisms then made may be communicated to no person who was not a member of the Academy at the time of the discussion.

XXIII. Any rule of the Academy may be amended, suspended, or repealed on the written motion of any two members, signed by them, and presented at a stated session of the Academy, provided the same shall be approved by a majority of the members present.

By a resolution adopted January 12, 1864, the president is, *ex officio*, a member of all Government committees of the Academy.

APPENDIX C.

ORGANIZATION OF THE ACADEMY, 1889.

	Expiration of term.
MARSH, O. C., <i>President</i>	April, 1895
LANGLEY, S. P., <i>Vice-President</i>	April, 1895

APPENDIX D.

TRUST FUNDS OF THE ACADEMY.

The National Academy of Sciences has been authorized by Congress to hold trust funds, and up to the present time, five gifts of importance have been received. The proceeds of four of these are available, and have already rendered much aid in promoting original research in science. The increasing usefulness of these various gifts makes it desirable to place together on record the original instruments of trust, and an account of the grants made from these funds since they were received by the Academy.

THE BACHE FUND.

The first important gift received by the Academy was from its first president, Alexander Dallas Bache, who left the greater part of his property in trust to the Academy, at his death in 1867. The income of the fund has been available for about 18 years, and the special grants made are stated in the report which follows the various instruments of gift relating to the trust.

EXTRACT FROM THE WILL OF ALEXANDER DALLAS BACHE.

March 18, 1862.

Item: As to all the rest and residue of my estate, including the sum of \$5,000 placed at the disposal of my wife in case she should not desire to make any disposition of the same, I direct my executors hereinafter named to apply the income thereof, after the death of my wife, according to and under the direction of Joseph Henry, of Washington, Louis Agassiz and Benjamin Peirce, of Harvard College, Massachusetts, to the prosecution of researches in physical and natural science by assisting experimentalists and observers in such manner and in such sums as shall be agreed upon by the three above-named gentlemen, or any two of them, whom I constitute a board of direction for the application of the income of my residuary estate for the above objects after the death of my said wife. The class of subjects to be selected by this board and the results of such observations and experiments to be published at the expense of my trust estate under their directions out of the income thereof but without encroaching on the principal.

In case of the death or inability to act of all or any of the three gentlemen I have named, in my wife's lifetime, my will is that she shall supply their places in the board of direction by an instrument of writing, either testamentary or otherwise, desiring that, in the selection of the persons to administer the income of the trust fund hereby created, she will have regard to the selection of persons whose attention has been directed to the same branches of science as those I have named, and so that each of

the departments of physics, mathematics, and natural history shall be represented in the board. In case of any vacancy occurring in the board of direction after its organization, and after the death of my wife, by reason of the death, inability, or refusal to act, or resignation of any of its members, my will is that the surviving or remaining member or members, for the time being, shall have power to fill vacancies so occurring in the board by the selection of other person or persons to fill such vacancies, and so on from time to time as vacancies occur. My intention being that the board of direction shall have power to continue its existence, and to filling all vacancies occurring in their body from time to time, I direct that a minute of their proceedings be kept, and that the appointment of any member by the board shall be notified in writing to the trustees, for the time being, of my residuary estate. In the event of any failure of the board, for the time being, to direct the application of the income of my said residuary estate, or to continuing its existence by filling vacancies occurring in their body, my will is that the application of the income thereof for the purposes and objects declared in this clause of my will shall be made by the trustees, under the direction of the American Philosophical Society of Philadelphia.

* * * * *

Item : I hereby nominate and appoint my friends, Peter McCall, esq., and Morton P. Henry, esq., of the city of Philadelphia, and the survivor of them, to be the executors of and trustees under this my last will and testament.

CODICIL, JULY 15, 1863.

Item : I give and devise to my sister, Sally Franklin Wainwright, the house purchased by me, situated No. 396 West Twentieth Street, in the city of Washington, between G and H streets, to be held and enjoyed by her during the term of her natural life. After her death I direct the said house shall pass with the residue of my estate (subject to a life estate of my wife, Nancy Clarke Bache, therein, in case she should survive my sister) to the "National Academy of Sciences," upon the trusts set forth as to the said residue of my estate.

* * * * *

Item : My will is that, upon the death of my wife, all the rest and residue of my estate shall be paid over to and vest in the corporation of the National Academy of Sciences, incorporated by act of Congress, passed the 3d day of March, A. D. 1863, whom I hereby appoint trustees in the place of my said executors under the fourth clause of my said will, to apply the income, according to the directions in the said clause contained, to the prosecution of researches in physical and natural science by assisting experimentalists and observers in such manner and in such sums as shall be agreed upon by the board of direction in the said clause named. My will further is, that, in case of any failure of the board for the time being to direct the application of the income of my residuary estate, or to continue its existence by filling vacancies occurring in their body, the application of the income thereof for the purposes and objects declared in the said clause shall be made under the direction of the National Academy of Sciences instead of the American Philosophical Society, of Philadelphia. In all other respects the said application of the income to the purposes aforesaid to be made by the same persons and under the same rules as I have prescribed in the said clause of my will.

Duly sworn to before Samuel Lloyd, February 27, 1867, in the city and county of Philadelphia.

BACHE TRUST FUND.

By the above will of Prof. A. D. Bache, his property, after the death of Mrs. Bache, passes to the National Academy of Sciences as a trust fund, the income of which is to be applied to the prosecution of

researches in physics and natural science, in such manner as shall be agreed upon by the board of direction, appointed by the fourth clause of his will. On the death of Mrs. Bache, which occurred in February, 1870, the executors proceeded to settle the estate. After paying various legacies, the amount of the trust fund was about \$41,250.

The treasurer was given full power, by a vote of the Academy, to receive the trust fund and to act as attorney in fact for the Academy in all matters pertaining thereto. At his own suggestion, he was also required to give bonds for the faithful discharge of his duty in the sum of \$50,000.

It was resolved that the whole fund should be invested in United States securities as early as practicable.

THE LAST WILL AND TESTAMENT OF NANCY CLARKE BACHE.

I hereby, in pursuance and exercise of the power of appointment contained in the last will and testament of my husband, Alexander Dallas Bache, devise, bequeath, and appoint the sum of five thousand dollars of the principal of the estate of my said husband, over which I have a power of appointment by his will, to be paid by his executors, or by such person or persons as shall hold the principal of the estate at my death, to my nephew, Henry Wood Bache, absolutely; and I hereby request my nephew, in case he should die unmarried and without issue, to make such a disposition of this amount by will as will secure it to be paid at his death to the National Academy of Sciences, at Washington, to be held by that corporation upon the same trusts and for the same purposes as are declared by my husband in his will, as to the residue of his estate after my death. I expressly desire, however, that it shall be understood that this request shall not be construed into any direction which would interfere with his full control of the principal, which is to be paid into his hands directly.

Second. I hereby direct the house, No. 1624 Chestnut street, in which I now reside, to be sold by my executor hereinafter named, within a reasonable time after my death, either at public or private sale, and after deducting from the purchase money any debts or expenses connected with the sale, and the administration of my estate, which, with the cash on hand or other property which I may own or possess at my death, shall be sufficient to satisfy, I direct my executor to pay over the net proceeds to the National Academy of Sciences, at Washington, to be held by that corporation as trustees in trust to apply the income thereof to the prosecution of researches in physical and natural science, according to the directions contained in the last will and testament of my husband as to the residue of his estate after my death in the same manner as if all the directions contained in the last will and testament of my husband and in the codicil thereto were herein repeated at length; my object being to make precisely the same disposition of the proceeds of this house as was made by my husband of his residuary estate after my death.

Third. I direct all the medals and diplomas of my husband, and the large photograph of him now in my possession, to be deposited and remain with the National Academy of Sciences. I have made a memorandum of the disposition of certain other articles which I desire shall be carried into effect as if contained in this will. I appoint Morton P. Henry, of Philadelphia, executor of this my last will and testament.

CODICIL TO THE LAST WILL AND TESTAMENT OF NANCY CLARKE BACHE, DATED APRIL 19, 1869.

Item: I hereby direct my executor to pay out of the proceeds of the sale of my said house, No. 1624 Chestnut street, Philadelphia, which I have directed to be sold, the sum of five hundred dollars to my nephew, Henry Wood Bache, for his own use and

benefit. I further direct my executor to invest five thousand dollars of the proceeds of sale of said house in his own name, as trustee, in such securities as he may think proper, and to pay the income thereof to my nephew, Henry Wood Bache, during his natural life. After the death of my nephew, I direct that the principal of the said sum of five thousand dollars shall go to the National Academy of Sciences, at Washington, in trust for the same uses and purposes as are declared as to the proceeds of sale of said house by my said will. I expressly declare that the above bequests to Henry Wood Bache are in addition to the five thousand dollars I have appointed to him out of my husband's estate. *Item*: I give and bequeath to my faithful servant, Isabella Mallihan, the sum of one hundred dollars, to be paid to her out of the proceeds of sale of said house. *Item*: I give and bequeath to my sister-in-law, Mrs. Sophia A. Irwin, the sum of one thousand dollars, to be paid to her out of the proceeds of sale of my said house. *Item*: I desire my executor to permit my sister, Mrs. Littlefield, to occupy my house for six months after my death free of rent, if she should desire to do so, during which time it shall remain unsold. *Item*: I hereby declare that the balance of the proceeds of the sale of my said house shall go, after paying and providing for the above legacies, as is set forth and declared in my said will, which in all other respects I hereby republish and declare as my last will and testament.

Sworn and subscribed before John Campbell, deputy register, in the city and county of Philadelphia, January 20, 1870.

STATEMENTS REGARDING THE BACHE FUND.

In April, 1871, the treasurer, Mr. Fairman Rogers, announced that the proceeds of the estate left to the Academy by the late Prof. A. D. Bache, had been formally handed over to him by the executors; that these funds amounted to \$40,515.07, together with an annual ground rent of \$102, and some land in Missouri not now available; and that in conformity with the resolutions adopted by the Academy, he was converting the securities into United States bonds as soon as practicable, and had given bonds in the sum of \$50,000.

In April, 1872, the treasurer made a financial report concerning the Bache trust fund, and stated that the annual income amounted at present to about \$2,500 in gold. He presented his bond to the Academy, which was approved and placed in the custody of the president.

The president informed the Academy that the board of direction had made two appropriations; one for the promotion of a magnetic survey of the United States, under the direction of Mr. Hilgard, and one for investigations of sun spots, by Professor Winlock.

In April, 1876, Mr. Henry, on the part of the board of direction, gave a statement of appropriations made for the past year.

The treasurer submitted a report of the condition of the fund, showing that the available income balance was \$2,426.97. Upon his suggestion, a resolution was adopted by the Academy, authorizing the sale of the ground-rent forming part of the assets.

In April, 1877, on motion it was—

Resolved, That all apparatus procured at the charge of the Bache fund for the use of investigators shall be duly receipted for by those to whom it is loaned, according to forms to be prescribed by the board of direction, and shall be returned to the

officer having charge of the property of the Academy whenever the investigation for which it was provided is completed, but that it shall at all times be held subject to the disposal of the Academy.

At a meeting of the Academy held in April, 1879, it was reported by the treasurer that, by the death of Henry Wood Bache, the Bache fund would be increased by the amount of \$4,650, according to the terms of the will of Mrs. A. D. Bache.

It was therefore—

Resolved, That Fairman Rogers, treasurer, be authorized to receive from the trustees of Henry Wood Bache, under the will of Mrs. A. D. Bache, all cash and securities payable to the National Academy of Sciences in the settlement of his accounts as trustee, and that he be further authorized to execute all papers required in the transaction.

At the stated session, in April, 1884, Mr. Hilgard, on the part of the board of direction of the Bache fund, made a statement of the present condition of the fund, explaining the policy which had formerly guided the board, and the rules adopted by the present board, with the view to having the fund more directly applied to distinct objects, the results of which might be published as “Memoirs of the Bache Fund.”

REPORT ON THE BACHE FUND.

At the session of the National Academy held at Washington in April, 1888, resolutions were passed calling upon the board of direction of the Bache fund to present a detailed report of their expenditures from the fund up to the present time. A wish was at the same time expressed that references should be given to memoirs and papers containing results obtained through the application of the fund.

The present report is intended to comply as far as possible with the request of the Academy. It is drawn, for the greater part, at least, from memoranda furnished by Prof. J. H. C. Coffin, from 1881 to 1887, treasurer of the Academy.

So far as can now be determined, it has from the beginning been the custom of the board of direction, in case of approval of any application for money from the Bache fund, to indorse their approval upon the application, and then to forward the application to the treasurer for payment.

When the present board came into office, formal rules were adopted requiring the production of proper vouchers for expenditures, and also making it necessary that the board of direction should be unanimous. For many years past, Prof. J. E. Hilgard, as the only member of the board residing in Washington, has been chairman of the board, and has conducted business directly with the treasurer. Applications for money have, it is believed, been most frequently made to him, but sometimes to the other two members of the board. The difficulty in making out an absolutely perfect list of all the appropriations made by the board arises from the fact, that the orders prior to April 19, 1884, were stolen

from the treasurer's box (together with all other vouchers) in the Academy room in the Smithsonian Institution. It is believed, however, that the list herewith furnished up to April, 1888, is nearly, if not quite complete. The list is as follows:

1871. Sept. 6, to Prof. J. E. Hilgard for the magnetic survey of the United States	\$500.00
1872. Jan. 16, to Prof. J. E. Hilgard for the same	500.00
1872. Jan. 16, to Prof. Joseph Winlock for investigations of sun spots	400.00
1872. Apr. 29, to Prof. J. E. Hilgard for the magnetic survey of the United States	500.00
1872. July 20, to Prof. Joseph Winlock for investigations of sun spots	400.00
1872. Nov. 28, to Prof. J. E. Hilgard for magnetic survey of the United States	1,000.00
1873. Feb. 17, to Prof. Joseph Winlock for investigations in solar physics ..	1,200.00
1873. Nov. —, to Prof. J. E. Hilgard for magnetic survey	1,200.00
1874. Mar. 16, to Prof. Joseph Winlock for the same as No. 3	500.00
1874. June 15, to Prof. J. E. Hilgard for magnetic survey	1,200.00
1875. June 17, to Prof. J. E. Hilgard for magnetic survey	1,000.00
1875. Oct. 5, to Prof. J. E. Hilgard for magnetic survey	500.00

The magnetic survey of the United States made at the charge of the Bache fund was terminated in 1876. The results obtained up to that time were published in detail in the Coast Survey Report for 1882, Appendix 14, 106 pp., 4to.

The money received by Professor Winlock was employed under his direction in observations of the sun, as described in the preface to vol. VIII of the Annals of the Observations of Harvard University, and the results were published in the second part of the same volume.

1875. Oct. 25, to Charles S. Peirce	400.00
(Two grants, one of \$1,200 for the study of color; one of \$500 for the comparison of sensations.)	
1876. Apr. 28, to Prof. A. M. Mayer for acoustic researches	250.00
Professor Mayer's results are contained in the Memoirs of the National Academy of Sciences, vol. III, Part I, 1884.	
1876. May 24, to Prof. J. E. Hilgard for the magnetic survey of the United States	1,000.00
1876. Sept. 18, to Charles S. Peirce	400.00
1876. Nov. 18, to Prof. S. P. Langley	500.00
1876. Dec. 12, to Charles S. Peirce	400.00
1877. May 16, to Prof. Wolcott Gibbs for researches on the complex inorganic acids	100.00
1877. June 13, to Prof. A. M. Mayer for researches on the nature of the discharge of the inductorium	500.00
Memoirs Nat. Acad., vol. III, Part 1 (1884).	
1877. Oct. 5, to Prof. J. E. Hilgard for the magnetic survey of the United States. Computations of field work from 1871 to 1876	600.00
1877. October 22, to Prof. Wolcott Gibbs for researches on the complex inorganic acids	200.00
1877. Nov. 19, to Prof. S. P. Langley	500.00
1878. Sept. 30, to Charles S. Peirce	500.00

1878. Sept. 30, to C. R. Powalky, PH. D. \$500.00
 For a new reduction of La Caille's observations of fundamental stars in the southern heavens in 1749-1757. Published in the report of the Coast and Geodetic Survey for 1882, Appendix No. 21, 1879.
 June 17, to R. W. Willson, treasurer Fort Worth eclipse party, to pay part of the expense of publishing the observations made by the party at Fort Worth, in July, 1878.
 Published: "Report of the observations of the total solar eclipse, July 29, 1878, made at Fort Worth, Texas."
1879. Jan. 17, to Leonard Waldo for work on eclipse party 100.00
 Report published by John Wilson & Son, Cambridge, and distributed to leading observatories and societies.
1879. May 10, to Samuel Hein (object not stated)..... 150.00
1879. May 20, to Prof. Wolcott Gibbs for work on complex inorganic acids. 300.00
1879. Aug. 2, to J. C. Watson (object not known)..... 1,000.00
1880. Feb. 17, to the American Journal of Science for magnetic maps 60.00
1880. Mar. 13, to Prof. C. S. Lyman, for the board of managers of the Yale observatory to aid the thermometric bureau of the observatory in purchasing standard thermometers and other instruments for its necessary equipment 500.00
 Reports published: "Report of the Board of Managers of the Observatory of Yale University to the President and Fellows," 1880-'81 to 1887-'88.
1881. June 6, to Prof. S. P. Langley for observations on the physical constitution of the sun..... 1,000.00
1881. Dec. 9, to Prof. Wolcott Gibbs for work on complex inorganic acids.... 300.00
 Dr. Gibbs's work on the complex inorganic acids is not yet completed. Five installments have been published in the Proceedings of the American Academy of Arts and Sciences, vols. XV, XVI, XVII, XVIII, XIX.
1882. July 14, to Prof. S. Newcomb for experiments on the velocity of light. 1,200.00
 The results of this investigation were published in the astronomical papers of the American Ephemerides, vol. II, parts III and IV.
1883. Apr. 25, to Mr. Rockwell for the eclipse party 800.00
1883. June 6, to Mr. Rockwell for the eclipse party 600.00
1883. Nov. 27, to Prof. E. S. Holden for observations of the aurora borealis and zodiacal light..... 300.00
1883. Nov. 27, to Prof. E. S. Holden for the purchase of an aurora spectro-scope, \$300 (less \$20.26 returned), \$279.74. This instrument is now at the Washburn Observatory, Madison, Wis. In consequence of the removal of Professor Holden to California a short time after it was received, no work suitable for publication was done with it. Professor Holden refunded \$20.26.
1884. Sept. 17, to Prof. S. P. Langley for observations on the physical constitution of the sun..... 1,500.00
 Professor Langley's work has been done partly at the expense of the Bache fund, and partly at the expense of other funds, and his results have been published together so that a precise reference to what has been done with the Bache fund alone is not possible. We may, however, cite the following: American Journal of Science, August, 1887; Memoirs of the National Academy of Sciences for 1882, vol.—; American Journal of Science for March, 1884; the same for January, 1886; the same for August, 1886.

40 REPORT OF THE NATIONAL ACADEMY OF SCIENCES, 1889.

1884. Oct. 22, to Prof. Ira Remsen for observations on the influence of magnetism upon chemical action	\$500.00
Two preliminary papers have been published in the American Chemical Journal, vol. VII, p. 430. A paper giving the complete results will soon be published in the American Chemical Journal.	
1884. Nov. 6, to Prof. H. B. Hill for the study of pyromucic acid	200.00
The results of this work have been published in Leibig's Annalen, vol. CCXXXII, p. 42; in the Berichte der Deutschen Chem. Gesellschaft, XVIII, 2095; XX, 252; XX, 3359; and in the Proceedings of the American Academy of Arts and Sciences, XXI, 135; XXII, 315; XXIII, 188. Other papers are in press or nearly ready for publication.	
1884. Nov. 20, to Prof. E. S. Holden for observations on 303 fundamental stars	400.00
1884. Dec. 4, to Dr. E. H. Hall for investigations in electricity	500.00
Results published in the August and October numbers of the American Journal of Science for 1888.	
1884. Dec. 26, to W. M. Davis for observations on the motion of clouds as indicating upper currents	50.00
No published report has been made.	
1885. March 26, to W. M. Davis for observations on thunder storms	200.00
1885. April 6, to Prof. E. S. Holden for observations on 303 fundamental stars	225.00
Professor Holden's work on the observations of fundamental stars appeared in the publications of the Washburn Observatory, vol. IV, 1885.	
1885. May 1, to Prof. A. A. Michelson for work on the velocity of light....	283.97
1885. June 11, to Prof. E. C. Pickering for observations on stellar photography	1,000.00
Professor Pickering's results have been published in the Memoirs of the American Academy of Arts and Sciences, XI, 179; XVIII, No. 4, of the Annals of Harvard College Observatory; in vol. XVIII, No. 6, of the same; and vol. XVIII, No. 8.	
1885. July 2, to Prof. J. E. Hilgard for the magnetic survey of the United States. Supplementary work	50.00
1885. July 8, to Prof. J. E. Hilgard for same	150.00
1885. July 8, to Yale College Observatory for determination by A. Hall, jr., of the mass of Saturn	300.00
1885. Nov. 9, to Mr. A. G. Webster for an investigation of the mechanical equivalent of heat by an electric method	250.00
Nothing was accomplished by this work. The apparatus was forwarded to the treasurer at Washington, and \$29.11 of the money refunded.	
1885. Dec. 31, to Prof. E. C. Pickering for observations on stellar photography	1,000.00
1886. Feb. 27, to Yale College Observatory for determination by A. Hall, jr., of the mass of Saturn	300.00
1886. March 3, to the New England Meteorological Society for observations on thunder storms	300.00
1886. July 28, to Yale College Observatory for determination by A. Hall, jr., of the mass of Saturn	300.00
Mr. Hall, under Dr. Elkin's direction, made observations in 1885-1887, and has since that time been engaged in reducing the same. The details are not ready for publication, but the results of his work were communicated to the Academy at its meeting in April, 1889.	
1886. Sept. 29, to Dr. B. A. Gould for measurements of the Cordova photographs	500.00

1886. Oct. 7, to Prof. E. C. Pickering for work on stellar photography	\$1,000.00
1887. Jan. 30, to Dr. B. A. Gould for measurements of the Cordova photographs	500.00
1887. Mar. 22, to Prof. A. A. Michelson for researches on light.....	500.00
The results of this work have been published in the American Journal of Science and Arts for May, 1886.	
1887. Mar. 24, to Prof. H. A. Rowland for continuation of work on solar spectrum	1,000.00
Professor Rowland's results have not been published in full. They are partly contained in the American Journal of Science for March, 1887, and are embodied in Professor Rowland's magnificent photographic map of the solar spectrum, second series, 1888. Nine plates, 12 by 36 inches.	
1887. June 2, to Prof. S. Newcomb for the Eclipse Expedition to Japan	2,000.00
The full report of the expedition, by Prof. D. P. Todd, was presented to the Academy, April 19, 1889.	
1887. July 26, to Prof. A. A. Michelson for researches on light.....	500.00
1887. Nov. 15, to Prof. Wolcott Gibbs for a systematic study of the action of chemical compounds upon the animal system.....	1,000.00
1888. Apr. 25, to Prof. T. C. Mendenhall, to carry on seismological researches.	100.00
1888. June 10, to Prof. E. D. Cope for the purpose of conducting researches on the extinct vertebrata of North America; for the payment of the salary of one expert préparateur of the fossils in extracting them from the rock, cementing fragments, etc.....	600.00
1888. Sept. 15, to Prof. E. D. Cope (appropriation No. 2) for the payment of expenses involved in work on vertebrate palæontology.....	600.00
1888. Nov. 2, to Prof. D. P. Todd, to defray the expenses of printing and distributing instructions with reference to observations to be made by volunteers on the total eclipse of January 1, 1889	125.00
The results are embodied in part in a paper <i>On composite coronagraphy</i> , read before the Academy, April 17, 1889.	
1888. Dec. 7, to Prof. Wolcott Gibbs (second appropriation) for a systematic study of the action of chemical compounds upon the animal system.	1,000.00

As already stated, it is believed that this report is complete, as the treasurer's books were not stolen together with the applications and vouchers. As it is very desirable, however, that the report should be made as complete as possible, the undersigned would suggest that it should be printed before final acceptance by the Academy, and that printed copies should be distributed among members who have received appropriations from the fund, with the view of obtaining any correction necessary.

Respectfully submitted.

JAMES D. DANA.
WOLCOTT GIBBS.
J. E. HILGARD.

THE JOSEPH HENRY FUND.

At the April meeting, 1878, the treasurer of the Academy made a statement respecting the "Joseph Henry Fund" of \$40,000, contributed by Fairman Rogers, Joseph Patterson, George W. Childs, A. J. Drexel, F. A. Drexel, Charles H. Rogers, J. G. Fell, Isaac Lea, Asa Packer, John Welsh, W. Blanchard, James Lennox, executors of the estate of John C. Green, Mrs. John C. Green, Robert L. Stuart, Miss

C. L. Wolfe, William Libbey, E. N. Dickerson, Cyrus W. Field, Thomas A. Scott, W. W. Corcoran, George P. Wetmore, Thomas H. Powers, J. S. Morgan, J. Pierrepont Morgan, I. V. Williamson, John W. Garrett, Charles S. Coxe, Cyrus H. McCormick, J. E. Caldwell, William Weightman, Alexander Brown, Henry C. Gibson, J. Donald Cameron, Samuel M. Felton, H. H. Houston, and Nat. Thayer, "as an expression of the donors' respect and esteem for Professor Henry's personal virtues, their sense of his life's great devotion to science, with its results of important discoveries, and of his constant labors to increase and diffuse knowledge and promote the welfare of mankind," which sum of \$40,000 they have caused to be invested in certain securities, and to be deposited with and held by the Pennsylvania Company for insurance of lives and granting annuities in trust, from time to time to collect the income thereon, and to pay over the same to Prof. Joseph Henry during his natural life, and after his death to his wife and daughters, and after the death of the last survivor "to deliver the said fund and the securities in which it shall then be invested to the National Academy of Sciences, to be thenceforward forever held in trust under the name and title of the 'Joseph Henry Fund,' the principal to be forever held intact, and the income to be from time to time applied by the said National Academy of Sciences, in its sole discretion, to assist meritorious investigators, especially in the direction of original research."

A resolution was adopted accepting said trust, and directing, authorizing, and empowering Fairman Rogers, treasurer of the Academy, in its name and upon its behalf, to affix its corporate seal to and to execute all such deeds, writings, and assurances in law as may be necessary to carry the said trust into effect.

On motion of Mr. W. B. Rogers it was unanimously—

Resolved, That the National Academy of Sciences hereby present their grateful acknowledgments to Messrs. Joseph Patterson, Fairman Rogers, George W. Childs, and the other subscribers to the "Joseph Henry Fund," for the generous contributions by which they have expressed their appreciation of the lifelong and disinterested scientific labors of the revered president of the Academy, and have provided an important future addition to its means of scientific usefulness.

THE WATSON TRUST FUND.

This trust fund was left to the Academy by one of its most distinguished members, Prof. James C. Watson, at his death in 1880. An extract from the will and the action of the Academy in reference to it are given below, and also the awards since made by the Academy from this fund.

EXTRACT FROM THE WILL OF JAMES C. WATSON.

The will of the late James C. Watson contains, with bequests to several members of his family, the following provisions:

Fifth. I give and devise, subject to conditions and legacies hereinbefore and hereafter mentioned, all the rest, residue, and remainder of my real and personal estate to the National Academy of Sciences of the United States of America, of which I am a member, which said Academy was incorporated by act of Congress approved March

3, A. D. 1863, to be aggregated, kept, and invested as a perpetual fund, the income of which shall be expended by said Academy for the promotion of astronomical science.

I direct that all the stocks, bonds, and securities owned by me (than those specifically bequeathed otherwise) be converted into money on the most advantageous terms possible, and as soon as it may be advantageous to do so, and paid over to the treasurer of said National Academy of Sciences. I direct that any other personal property belonging to me, as well as any real estate of which I may die possessed, except my books and scientific papers, be sold and disposed of as soon as may possibly be done advantageously to the interests of my estate, and that the proceeds thereof be paid over to the treasurer of said National Academy of Sciences.

I direct that my books and scientific papers be transferred to said National Academy of Sciences, to become part of the library of said Academy.

In order to carry out the wish hereinbefore expressed as to the disposal of the income from the fund resulting from my estate hereby devised to said National Academy of Sciences, I do hereby direct that the designation of the particular objects and work which may be aided by this fund shall be determined, subject to approval by a vote of the Academy, by a board of trustees, three in number, who shall be members of the Academy, and elected, after the first herein named, by said Academy whenever a vacancy may occur by death or otherwise. The trustees so appointed shall hold said office, unless voluntarily relinquished by them, during the period of their membership in said National Academy of Sciences; and I do hereby appoint and constitute Julius E. Hilgard, of the U. S. Coast Survey, and Simon Newcomb and J. H. C. Coffin, professors of mathematics, U. S. Navy, all of Washington, in the District of Columbia, to be the first board of trustees for the purposes herein named.

It is my wish that the Academy may, if it shall deem proper, provide for a gold medal of the value of \$100, to be awarded, with a further gratuity of \$100, from time to time, to the person in any country who shall make any astronomical discovery or produce any astronomical work worthy of reward and contributing to our science.

It is my further wish that provision be made for preparing and publishing tables of motion of small planets which have been discovered by me as soon as it may be practicable to do so, and I devise that in all cases the trustees and Academy shall act in harmony to obtain results of the greatest possible aid to our science from the income fund resulting from my estate. I desire that results so obtained shall be published as speedily as possible, in such manner as may be provided by the Academy.

I direct that the said National Academy of Sciences take all necessary and proper measures to invest the fund resulting from the property hereby devised where they may be safe and yield the greatest possible income consistent with safety.

This will is dated July 11, 1874.

STATEMENT IN REGARD TO THE BEQUEST OF THE LATE PROFESSOR WATSON,
BY MR. NEWCOMB, CHAIRMAN OF THE TRUSTEES.

April, 1881.

It is known to members of the Academy that our late lamented colleague, Prof. James C. Watson, has bequeathed all his estate, after satisfying certain claims and paying certain annuities to relatives, to the National Academy of Sciences, in trust for the promotion of astronomical researches. Having been named one of the executors, I took occasion during a journey to Madison last January to inform myself of the condition of the estate, and the probable benefits to be derived from it. I find that, although almost the entire property was in the State of Michigan, yet, as he was a resident of Wisconsin at the time of his death, and as his estate was entirely personal, the courts of the latter had exclusive jurisdiction of the bequest.

As none of the executors named in the will are residents in Wisconsin, and as they are widely scattered, it will be difficult for more than one to act, and the administration will have to be conducted under the direction of the probate court at Madison.

It is difficult to see what amount, if any, the Academy will ultimately receive for the purposes desired by the testator, owing to two causes, the unsettled condition of several business enterprises in which our colleague had invested much of his means, and the indefinite character of his business arrangements with the University of Wisconsin. The only item of the estate to which even approximate cash value *can* be assigned consists of stock and policy in the Mutual Life Insurance Company of Michigan, the total value of which probably amounts to about \$30,000.

The next item in importance is the Printing and Publishing Company of Ann Arbor, of which the deceased owned 499 shares out of the total of 500. The actual cost of this stock was about \$26,000, but the property at present owned by the company is of so miscellaneous a character and it is so complicated by litigation as to make it hardly possible even to guess at the value of its assets.

I judge, however, from a general examination of its property, that should the company go into liquidation it might realize anywhere from \$5,000 to \$15,000, but a debt of \$5,000 is due from it, so that the net amount may range from zero to \$10,000, the lower ultimate being more probable than the upper one.

The next item in importance is the Chase Publishing Company of Toledo, which is said to be profitable, but to it no definite value can be assigned.

On the other hand, our colleague at Madison expended considerable sums on improvements of the observatory and its grounds, without any distinct understanding with the board of regents as to who should ultimately bear the expense. These improvements include the Watson solar observatory, the students' observatory, the fitting up of the director's house, the purchase of the transit instrument, and several other items. An amount of between \$5,000 and \$10,000 is, I believe, due on these various improvements, so that if the estate is to pay for them all it will be materially diminished.

I may also add that, under the laws of Wisconsin, Mrs. Watson is entitled in lieu of the provision made for her in the will to accept one-third of the net proceeds of the estate. It has been suggested that in the event of the estate not realizing the amount expected an arrangement should be made with Mrs. Watson to allow her the entire income from it during her life on condition of the entire amount reverting to the Academy on her death. This arrangement will probably commend itself if the amount shall be found insufficient to carry out the objects which our lamented colleague had at heart in making the bequest.

The matter of the action of the Academy on the Watson bequest was referred to the council.

STATEMENTS RELATING TO THE WATSON FUND.

The final account of Leopold Gruner, the only executor named in the will, was rendered to the county court of ——— County, in the State of Wisconsin, May 31, 1882.

Mrs. Annette H. Watson claimed, and was allowed under the laws of Wisconsin, one-third of the estate of her late husband in lieu of the bequests made her.

The decree of the court, made July 5, 1882, adjudges that the said executor retain in his hands the sum of \$3,000 for the purpose of paying the annuity bequeathed by the said James C. Watson, deceased, to his mother, Rebecca E. Watson.

That all the rest, residue, and remainder of said personal estate, consisting of the sum of \$5,057.25 in cash, 174 shares of said stock of the Michigan Mutual Life Insurance Company, and the undivided two-thirds of said miscellaneous books, and all

and singular the said books and scientific papers as delivered by said executor to it, be, and the same are hereby, assigned and set over to the said National Academy of Sciences, its successors and assignees.

Under this decree, the Academy received from the executor \$7,057.25 in cash and 134 shares of stock of the Michigan Mutual Life Insurance Company, of the par value of \$6,700, the reduction of 40 shares of the Michigan Mutual Life Insurance Company and the increase of \$2,000 having been made at the request of Mrs. Watson.

At the April meeting, 1883, the treasurer of the Academy, Mr. Coffin, presented the following resolutions in regard to the bequests of the late James C. Watson, which were adopted:

Resolved, That the National Academy of Sciences accepts the bequests of the late James C. Watson for the trust and purpose expressed in his will.

Resolved, That the Academy approves of the appropriation made by the board of trustees of \$500, or as much of the same as may be necessary, to aid in the observation of the total solar eclipse on May 6, 1883.

In April, 1884, the following recommendations of the trustees of the Watson fund, upon the advice of the council, were adopted by the Academy (these recommendations are based on the present cash balance of \$1,292.75, and the annual income of present investments, \$748):

(1) That the invested fund be increased by the addition of \$850.25, so that its par value may equal, as near as may be, \$13,750.25, the sum received from Professor Watson's estate.

(2) That dies, with suitable designs, be prepared for a medal to be awarded from time to time to the person in any country who shall make any astronomical discovery or produce any astronomical work worthy of special reward and contributing to the progress of astronomy, in compliance with the expressed wishes of Professor Watson.

(3) That there be set aside annually the sum of \$500, or as much thereof as may be necessary and available, to commence work on tables of the small planets discovered by Professor Watson, as also expressly desired by him in his bequest to the Academy, such work to be under the direction of Mr. Newcomb.

At the stated meeting of the Academy, held in Washington, in April, 1885, Mr. Coffin, on the part of the board of trustees of the Watson fund, reported that, since the session of the Academy in April, 1884, in accordance with resolutions then passed, the invested fund had been increased to \$13,750, the sum received from the bequest of Professor Watson, and progress had been made in procuring a model of the proposed Watson medal, and the work on the small planets, under the direction of Mr. Newcomb, had been commenced, but no money had yet been drawn from the treasury for that purpose.

At the April session, 1886, Mr. Newcomb, at the request of the board of trustees of the Watson fund, presented the following resolution, which was adopted by the Academy:

Resolved, That the Watson medal and the further sum of \$100 in gold be awarded to Dr. Benjamin Apthorp Gould, for his valuable labors for nearly 40 years in promoting the progress in astronomical science, and especially for his successful establishment of the National Observatory of the Argentine Republic, as manifested in the six volumes of observations recently prepared and published by him.

By vote of the Academy, the trustees of the Watson fund were authorized to take the proper steps for having the medal struck.

Mr. Newcomb reported that, while appropriations of money had been made for carrying out that part of Professor Watson's will which provided for the making of tables of the asteroids, work had been only partially commenced, owing to the difficulty of finding a sufficiently skilled computer to make such computations. They had been obliged to send abroad to find a person to make the computations necessary to enable an unskilled computer to continue the work on the other planets.

During the Washington meeting of the Academy, April, 1887, the president stated that Mr. Hilgard had resigned his position on the board of trustees of the Watson fund, and that Mr. B. A. Gould had been appointed to fill the vacancy.

PRESENTATION OF THE FIRST WATSON MEDAL.

At a public session of the Academy, held on the evening of April 20, 1887, the first James Watson medal and the sum of \$100 in gold were presented to Dr. B. A. Gould for his valuable labors for nearly 40 years in promoting the progress of astronomical science.

The president of the Academy, Professor Marsh, in his address in making this presentation, gave an account of the great work accomplished by Dr. Gould. The following extracts from this address will place on record here the main reasons for the first award of the Watson medal:

EXTRACTS FROM THE PRESIDENT'S ADDRESS.

The name of Benjamin Apthorp Gould, whom we are thus to honor to-night, is so familiar by his recent works, that we are in danger of forgetting his services as the pioneer in introducing the methods, culture, and ideas of German astronomy into this country. The years 1840 to 1843 might almost be considered as those of the birth of American astronomy. Then were founded the Washington and Cambridge Observatories, which brought forth such men as Walker, Hubbard, and Bond. Dr. Gould was then a student at Harvard, imbibing from Professor Pierce that enthusiasm for scientific work which that teacher so well knew how to inspire. Soon after graduation, Mr. Gould sailed for Europe to pursue under Bessel, Gauss, and others, the study of his favorite science in its most advanced phases. Winning the degree of PH. D. at Göttingen, he returned home full of student's honors, and started the *Astronomical Journal*. Later, he was appointed by Bache as head of the longitude department of the Coast Survey, in which position it

was a part of his duty to perfect and apply the method of determining longitudes by telegraph.

The Astronomical Journal was largely a labor of love, as the income could not possibly balance the outlay. Discontinued in 1861 on account of the advent of the civil war, it has recently been reëstablished after a silence of just 25 years. In 1868, Dr. Gould resigned his position on the Coast Survey, and shortly afterward accepted an invitation from the Argentine Government to found a national observatory in that country.

Sailing for his new post of duty in 1870, he expatriated himself for a period of 15 years. It is more especially for his work during this period that the distinction which we celebrate to-night was conferred upon him.

The northern hemisphere being the seat of civilization and the home of the astronomers of the world, the natural result was that the phenomena of the southern heavens were much less studied than those of the northern. Ardent astronomers were from time to time attracted thither to reap the harvest which nature had sown, as Lacaille in 1750, and Herschel in 1830, but such men could simply do little in a field so great. Permanent observatories were from time to time established. First, that at the Cape of Good Hope, by the British Government; then, that of the Chilian National Observatory, at Santiago, by our late honored associate, James M. Gilliss; and yet more recently, the Melbourne Observatory, by the government of South Australia. But these institutions were not prepared to make that complete survey of the southern heavens which our associate had planned.

Dr. Gould's great works are :

(1) The *Uranometria Argentina*, one volume, with large atlas. This work comprises a catalogue and map of all the stars down to the seventh magnitude, from the south pole to 10 degrees north declination, the position and magnitude of each being given. It is not a mere catalogue, but embodies an exhaustive study of the distribution of stars of different magnitudes and their relations to the Milky Way.

(2) The *Argentine General Catalogue*, one volume, 4to, contains the places of nearly 33,000 (32,448) stars, determined with the highest accuracy with the meridian circle. Three determinations of each star were generally made. The catalogue is followed by a list of the stars contained in some of the most noted clusters.

(3) The *Cordoba Zone Catalogues*, seven volumes, give the places of 73,160 stars down to the tenth magnitude.

The mere statement of these numbers affords no conception of the labor involved in these works. We may fairly compare the general catalogue with the zone observations projected by the International Astronomical Society more than twenty years ago. As far back as 1863, the work of determining the position of all the stars north of the equator down to the ninth magnitude was divided up among such observatories of Europe and America as were prepared to participate in it.

Their work is still incomplete, while that of our associate, commenced long afterwards, lies finished before us.

Many variable stars were discovered during these investigations, and two whose proper motion is about 6'' annually are equaled by only one other, so far as is known.

Eleven hundred photographs of southern star clusters taken during the years 1872-1883 have been preserved, and are now undergoing measurement.

Five volumes of meteorological observations have been published from stations established in all parts of the Argentine territory, giving the climate relations of the southern half of the continent, and establishing the isothermal lines.

The observatory and a national meteorological office were left in full organization and activity.

This vast and comprehensive work is embraced in 13 quarto volumes already published, and 6 are now prepared for publication, making 19 in all.

PRESENTATION OF SECOND WATSON MEDAL.

In 1888, at the April meeting of the Academy, the board of trustees of the Watson fund recommended that the second Watson medal be given to Prof. Edward Schönfeld, director of the University of Bonn, Germany, for his services in cataloguing and mapping the stars visible in our latitudes, and especially for his recently published southern *Durchmusterung*. This recommendation was approved by the Academy.

The following report was presented to the Academy by the board of trustees, giving the reasons for the award of the Watson medal to Professor Schönfeld:

REPORT OF THE TRUSTEES UPON THE AWARD OF THE WATSON MEDAL.

To the National Academy of Sciences:

The Board of Trustees of the Watson fund recommend that the Watson medal, with \$100 in gold, according to the provisions of the trust, be awarded by the Academy to Prof. Edward Schönfeld, Director of the University Observatory at Bonn, for his services in cataloguing and mapping the stars visible in our latitudes, and especially for his recently published southern *Durchmusterung*.

The plan of forming a catalogue of all the stars brighter than the tenth magnitude, from the north pole to the equator, was conceived many years since by our late honored associate, the illustrious Argelander. The actual work was begun in the spring of 1852, but was so severe that, after a year, Argelander was obliged to restrict his personal share in it to labors of revision and verification, leaving the actual telescopic survey to others, chief among whom were his assistants and

pupils, Dr. Schönfeld, now his successor in the Observatory, and Dr. Krüger, now Director of the Observatory at Kiel.

This magnificent undertaking was thoroughly accomplished, and the results, under the title of *Durchmusterung des nördlichen Himmels*, were published in three quarto volumes, the last of which appeared in 1862. This classic work has been since then, and must long remain, one of the most indispensable books of reference for the practical astronomer. It derives, if possible, an additional importance from serving as the basis for the vast undertaking of accurately determining the positions of all stars north of the equator to the ninth magnitude inclusive. This has been going forward for about twenty years, by the coöperation of a number of the principal observatories of the world, under the guidance of the *Astronomische Gesellschaft*, an international organization, in the establishment and conduct of which, Professor Schönfeld has taken a conspicuous part.

Meanwhile, his researches concerning the variable stars, both his many discoveries, and his thorough study of the laws which govern their variation, have not merely placed Professor Schönfeld in the foremost rank of the investigators in this department of astronomy, but, in the universal opinion of astronomers, at the head of all busy laborers in this field. To him, questions of doubtful nomenclature or notation have been submitted by astronomers of whatever nationality, and his verdict always commands universal acceptance. In this, as in the other fields of stellar astronomy already mentioned, the mantle of his great predecessor, Argelander, has fallen upon worthy shoulders, and the Observatory of Bonn has maintained its peculiar and unsurpassed eminence.

But the greatest achievement of Professor Schönfeld, and that which has especially prompted the trustees of the Watson fund in their recommendation of this award, is his last published work, the extension of the *Durchmusterung* from the equator to the southern tropic. Not only has he accomplished this in full conformity with the previous survey of the northern sky, in which he took so important a part, but he has emulated the example of his predecessor and teacher by the improvement of previous methods. The experience which he has attained in the northern *Durchmusterung* enabled him to extend the limit of brightness up to which his catalogue is exhaustive, and the 23 degrees of southern declination which it includes have been explored and surveyed by himself alone; he having made all the observations personally, and having personally computed them, and personally edited and superintended their publication. This southern extension of the census of the sky contains — stars, the positions of all of which have been reduced to the epoch of Argelander's *Durchmusterung*, and which are all likewise represented upon charts constructed with all attainable accuracy.

So brilliant and priceless a contribution to our stellar knowledge would demand recognition, even had it not been preceded by the other important and conspicuous labors to which we have referred.

The board of trustees has consequently felt no hesitation in its unanimous recommendation to the Academy.

SIMON NEWCOMB.

J. H. C. COFFIN.

B. A. GOULD.

WASHINGTON, *April* 18, 1888.

At a public session of the Academy, held on the evening of April 17, 1889, the second James Watson gold medal and the sum of \$100 in gold were presented to Prof. Edward Schönfeld, Director of the Observatory of Bonn, Germany.

As Professor Schönfeld was not present at this meeting, the foreign secretary was instructed to forward the medal and \$100 in gold to him through the German embassy. This was done, and the medal and fund were duly received by Dr. Schönfeld, who has since acknowledged their receipt and expressed to the Academy his high appreciation of the honor thus conferred upon him.

THE HENRY DRAPER FUND.

At the April session in 1883, the president announced that Mrs. Henry Draper, widow of Dr. Henry Draper, late an honored member of the Academy, had presented to the National Academy of Sciences a fund of \$6,000 for the establishment of a gold medal to be awarded every two years to the individual in this or any country who makes the most important discovery in astronomical physics, the value of said medal to be \$200, and the fund, in case the medal should not be awarded, to be applied by the Academy to investigations in the same department of science.

The text of the deed of gift is as follows:

DEED OF TRUST OF MRS. HENRY DRAPER.

Know all men by these presents that I, Mary Anna Palmer Draper, of the city, county, and State of New York, in consideration of the premises, and of the acceptance of the within trust by the National Academy of Sciences, and also in consideration of divers other good and valuable considerations, I, the said Mary Anna Palmer Draper, hereto moving, have given, granted, assigned, transferred, and set over, and by these presents do give, grant, assign, transfer, and set over unto the said National Academy of Sciences, and to their successors forever, a certain fund or sum of \$6,000, with the interest and income thereof, to have and to hold the same in trust, nevertheless upon the special trusts, and for the uses and purposes following, to wit:

First. In trust to invest, and to reinvest, the said sum of \$6,000, and to keep the same invested in good and safe securities, or in such other manner as shall be, in their opinion, best for the preservation and maintenance of said fund.

Second. In trust to use the interest and income thereof for the purpose of striking a gold medal, which shall be called the "Henry Draper Medal," shall be of the value

of \$200, and shall be struck in a die to be selected and presented to said National Academy of Sciences, by me, the said Mary Anna Palmer Draper. And the said medal shall be awarded and presented from time to time by the said National Academy of Sciences to any person in the United States of America or elsewhere, who shall make an original investigation in astronomical physics, the results of which shall be made known to the public, such results being, in the opinion of the said National Academy of Sciences, of sufficient importance and benefit to science to merit such recognition; provided, however, that said medal shall not be presented or awarded more frequently than once in 2 years, and provided, also, that the investigation for which it is awarded, or the completed publication thereof, shall have been made since the time of the last preceding award and presentation of said medal.

Third. In trust that if discoveries of equal importance shall be made in astronomical physics at or about the same time in the United States of America, and also in some other part of the world, each of which discoveries might, in the opinion of the said Academy, entitle the discoverer to be considered as a competitor for said medal, preference shall be given in the awarding thereof to discoveries made by a citizen of the said United States of America.

Fourth. In trust that if the said die shall at any time be lost, destroyed, broken, or in any way rendered unfit for the purpose of striking the said medal, a new die shall be procured, exactly similar to the one selected and presented as aforesaid, and shall be paid for out of the interest and income of the said fund; and such sum or sums of money as shall at any time or times be necessary for the proper care, custody, and protection of the said die or of the said fund hereby given, shall also be taken from and out of the interest and income of the said fund, whenever the same shall be deemed necessary by the said National Academy of Sciences.

Fifth. In trust that if at any time or times the interest and income of the said trust fund of \$6,000 shall exceed the amount necessary for the striking of said medal and the care of the said die, and of the fund, such surplus over and above the sum or sums so required for the purposes of the trust as hereinbefore recited and set forth shall be used in such manner as shall be selected by said National Academy of Sciences, in aid of investigation and work in astronomical physics to be made and carried on by a citizen or citizens of the United States of America.

And the said National Academy of Sciences doth signify its acceptance of the said fund of \$6,000, and doth engage to hold and manage the same upon the trusts and for the uses and purposes herein mentioned and set forth.

In witness whereof I, the said Mary Anna Palmer Draper, have hereunto set my hand and seal, and the said National Academy of Sciences hath hereunto caused its corporate seal to be subscribed by its president, this thirteenth day of April, in the year one thousand eight hundred and eighty-three.

[SEAL.]

MARY ANNA PALMER DRAPER.

Sealed and delivered in the presence of—

EDWARD A. DIXON.

MORNAY WILLIAMS.

As to Mary Anna Palmer Draper.

O. C. MARSH,

President of the National Academy of Sciences.

Witnesses to the signature of O. C. Marsh—

J. H. C. COFFIN.

ASAPH HALL.

SAM'L H. WALKER.

Executed and acknowledged before Mornay Williams, notary public, New York County.

Acknowledgment of officer of the Academy before Samuel H. Walker, notary public, District of Columbia.

It was moved and adopted that the deed of Mrs. Henry Draper be entered at length in the minutes of the meeting.

The following resolution was recommended by the council and adopted:

Resolved, That a permanent committee of five be appointed to consider the subject of the bestowal of the Henry Draper medal, and to recommend to the Academy, from time to time, such persons as they may consider deserving of the medal, with the ground of their recommendation.

In accordance with this resolution the president appointed the following members as the committee on the Henry Draper medal:

G. F. Barker, <i>Chairman</i> ,	
W. Gibbs.	A. W. Wright.
S. Newcomb.	C. A. Young.

The following resolution relative to the fund presented by Mrs. Henry Draper was reported and adopted:

Resolved, That the National Academy of Sciences accepts the fund of six thousand dollars presented to it by Mrs. Mary Anna Palmer Draper, and engages to maintain the same upon the trusts for the uses and purposes mentioned and set forth in a certain deed executed by her on the 13th day of April, in the year of our Lord one thousand eight hundred and eighty-three, and signifies such acceptance by causing the corporate seal of the Academy to be affixed and the said deed to be signed by its president.

The president appointed the following committee to consider the form of a resolution of thanks to Mrs. Draper: Messrs. W. Gibbs and G. F. Barker.

In 1884, at the April meeting, it was resolved, on recommendation of the council, that the home secretary have engrossed and properly signed the resolution of thanks to Mrs. Draper drawn up at the stated session of the Academy in 1883, as follows:

Resolved, That the grateful acknowledgments of the National Academy of Sciences are due to Mrs. Draper for the confidence which she has shown in selecting the Academy as the trustee of a fund designed to reward scientific labor, and by so doing to commemorate the services of one who was loved for his virtues, and honored for his eminent success in the branch of science to which he devoted his noble and useful life.

PRESENTATION OF FIRST DRAPER MEDAL.

At the stated session of the Academy in 1885, the committee on the Henry Draper medal reported that it had had before it the claims of various investigators working in the field of astronomical physics, and had considered fully their claims to the distinction implied in the award of this medal by the Academy.

That, as a result of its investigations, the committee recommended to the Academy the award of the first Henry Draper medal to our fellow-member, Prof. S. P. Langley, for his researches and discoveries in relation to solar radiation. This recommendation was adopted.

The following is the report of the committee:

REPORT OF THE COMMITTEE.

To the National Academy of Sciences:

By a resolution of the Academy, adopted April 19, 1883, it is made the duty of the committee on the Henry Draper medal "to recommend to the Academy, from time to time, such persons as they may consider deserving of the medal, with the ground of their recommendation."

The original deed of trust provides that "the said medal shall be awarded from time to time by the said National Academy of Sciences to any person in the United States of America or elsewhere, who shall make an original investigation in astronomical physics, the results of which shall be made known to the public, such results being, in the opinion of the said National Academy of Sciences, of sufficient importance and benefit to science to merit such recognition."

In accordance with the above resolution of the Academy, and with the provisions of the deed of trust, the committee on the Henry Draper medal begs leave to report that it has taken into consideration the researches which have recently been made by the men of science of this and other countries in the department of astronomical physics, and that in consequence of such examination the committee unanimously recommends that the Academy award the Henry Draper gold medal to Prof. Samuel P. Langley, of Allegheny, Pennsylvania. The committee bases this recommendation upon the numerous investigations of a high order of merit which have been made by Professor Langley within the past few years in solar physics, and especially in the domain of radiant energy. In corroboration of its opinion, the committee desires to specify the following memoirs, in which the results of these investigations are, for the most part, embodied:

1. *On the Minute Structure of the Solar Photosphere.* (Am. J. Sci., III, vii, 87, February, 1874.)

This paper gives the result of two years' work, and announces the discovery (since confirmed by Janssen) that four-fifths of the sun's light comes from less than one-fifth of its surface. It was illustrated with a plate containing the most detailed representation of a sun spot, which had appeared up to that time.

2. *The External Aspects of the Sun.* (J. Frank. Inst., August and September, 1874.)

In this paper, the noted engraving of the "typical sun spot" appeared for the first time. It was executed for the purpose of giving material for passing judgment on the current theories of sun spots, and had undoubtedly a considerable influence in determining the present conviction of students of solar physics that the surface of the sun is essentially gaseous or cloudlike. This engraving has been reproduced by Secchi, Proctor, Young, and nearly every author who has written on the subject.

3. *On the Comparison of Certain Theories of Solar Structure with Observation.* (Am. J. Sci., III, ix, 192, March, 1875. Published simultaneously in *Memorie degli Spettroscopisti Italiani*, Vol. IV.)

A statement of the above consequences more in detail.

4. *Sur la température relative des diverses régions du soleil.* Première Partie. Les noyaux noirs des taches; Deuxième Partie. Région équatoriale et régions polaires. (Comptes Rendus, March 22 and 29, 1875.)
5. *Étude des radiations superficielles du soleil.* (Comptes Rendus, September 8, 1875.)

The author shows in these papers the existence of a remarkable thermochroic action in the solar atmosphere, such that the vibrations of great wave-length are less absorbed than the visible and ultra-violet. He proves also that no such difference between the polar and equatorial radiation as has been asserted by Secchi exists. Hence, it follows that the sun, if deprived of his atmosphere, would appear *blue*. This statement, however, was first made in explicit terms at the Detroit meeting of the American Association for the Advancement of Science.

See the paper entitled—

6. *The Solar Atmosphere.* (Am. J. Sci., III, x, 490, December, 1875. Suppl. No.)
7. *Measurement of the direct effect of Sun spots on Terrestrial Climates.* (Monthly Not. Royal Astr. Soc., November, 1876.)

Here the author essays a new method of determining whether sun spots affect terrestrial climates or not, although he does not undertake to say whether they may not be the indices of some other action which does affect them. Considering the spots merely as interruptions of a determinate quantity of the solar heat, he succeeds in demonstrating that their total effect (from this point of view) on terrestrial climates can not alter the mean temperature of the earth by so much as one degree Fahrenheit.

8. *On certain Remarkable Groups in the Lower Spectrum.* (Proc. Am. Acad., 1878.)

Contains the author's discovery of the duplicity of the rays in the "great A" group of the solar spectrum.

9. *On the Temperature of the Sun.* (Proc. Am. Acad., 1878.)

In this paper, the author publishes the results of his comparison of the heat and light of the sun with that of the molten steel in the Bessemer converter. At this time (so late as 1878) the temperature of the sun was maintained by physicists of high repute to be not over 1500°C . The author's object in this comparison was not to determine this temperature, but to furnish irrefragable proof that it was at any rate very much higher than that which physicists, misled by Dulong and Petit's law, had assigned to it. Incidentally, the conclusion was reached that this celebrated law itself is absolutely unreliable, a position which is now fully conceded.

10. *Observations on Mount Etna.* (Am. J. Sci. III, xx, 33, July, 1880.)

The author here gives the results of his studies made during the winter of 1878-'79, upon the upper slopes of Mount Etna, which were connected with the improvement of solar observation by the employment of a station at a high altitude.

11. *The Progress of Solar Physics.*

An address as president of the physical section of the American Association for the Advancement of Science, delivered at Saratoga in August, 1879. (Proc. Am. Assoc., xxviii, 51, 1879.)

12. *The Bolometer and Radiant Energy.* (Proc. Am. Acad., xvi, 1880.)13. *The Bolometer.* (Proc. Am. Metrol. Soc., December, 1880.)14. *The Actinic Balance.* (Am. J. Sci., III, xxi, 187, March, 1881.)

His solar studies having convinced him that two-thirds of the sun's radiant energy was unexplored for want of the proper apparatus, the author spent the year 1880 in experiments on the construction of an instrument for analyzing and measuring this and like forms of energy. This instrument which he called the bolometer, from *Bολη* and *μετρον*, is described in the papers above mentioned.

15. *Sur la distribution de l'énergie dans le spectre solaire normal.* (Comptes Rendus, March 21, 1881.)16. *Distribution de l'énergie dans le spectre normal.* (Comptes Rendus, July 18, 1881.)17. *La distribution de l'énergie dans le spectre normal.* (Ann. Chim. Phys., February, 1882.)

The first fruit of the use of this new instrument was the demonstration that the amount of heat which the earth receives from the sun (the solar constant) had been greatly underestimated, owing, among other causes, to inability previously to measure the solar heat in sufficiently small portions of the spectrum. The leading facts in regard to the distribution of energy in the normal spectrum, from the sun, and the distribution of this solar energy before absorption by the earth's atmosphere, are given in these papers.

18. *The Selective Absorption of Solar Energy.* (Am. J. Sci., III, xxv, 169, March, 1883. Also, Ann. Phys. Chem., XIX, 1883, and Ann. Chim. Phys., V, XXIX, 497, August, 1883.)

Treated more fully in "The Professional Papers of the Signal Service. No. xv. Researches on Solar Heat and its Absorption by the Earth's Atmosphere. Expedition to Mount Whitney, 1884."

The results already announced were so important in their bearing on the science of terrestrial meteorology that the author conducted, under the joint auspices of the Allegheny Observatory and the United States Signal Service, an expedition to the Sierra Nevadas of Southern California, the results of which were published extensively in American and foreign scientific journals. In the first article above mentioned is an account of the leading facts observed; which are that the sun's light is essentially *blue*, and that what we call "white" light is due to the absorption of these blue rays, first by the sun's atmosphere and then by our own. It had always been supposed that the sun's red and infra-red rays were powerfully absorbed by our own atmosphere, which acted, according to the familiar comparison of Poisson and Pouillet, like the glass cover of a hot-bed, which absorbs solar heat more and more as we approach the infra-red. This universally accepted belief was directly contradicted by these researches, and it was shown that the nature as well as the

amount of the absorption of the solar rays had been so wholly misunderstood that the general outlines of these important truths were here given for the first time. The value of the solar constant, which until now had been accepted, was radically altered, Pouillet's value, 1.7 calories, being raised to 3. In connection with this, a map was given of the infra red solar spectrum, containing numerous lines and bands hitherto unknown; and, what was wholly new, with their places fixed upon the normal or wave length scale by direct observation.

19. *Memoir on the Experimental Determination of Wave-lengths in the Invisible Prismatic Spectrum.* (Mem. Nat. Acad. Sci., 1884 (Read October, 1883). Also Am. J. Sci., III, xxvii, 169, March, 1884, and Ann. Phys. Chem., July, 1884.)

Almost, if not absolutely, all of our present knowledge of the constitution of bodies forming the external universe is dependent upon our information concerning the wave-lengths of the energy they send us, of which that coming in the form of light and which is visible is but the smaller portion. Inasmuch as until lately we have known almost nothing about any waves but visible ones, all our knowledge about terrestrial and other dark-heat radiation is in a condition of empiricism even to-day; a fact which is a great reproach to physical science. This arises chiefly from our want of knowledge in the past of any means of determining what these wave-lengths are, or, as a consequence of this, from our inability to analyze the invisible spectrum (in which two-third of the solar energy resides) in the way we can analyze the visible. The memoir above mentioned fixes the wave-lengths of solar heat, which had been known hitherto in the visible spectrum only, throughout its whole extent, and for the first time gives a trustworthy means of investigating that unknown major portion of the whole solar energy on which all organic life depends. This is the real purport of the somewhat abstruse, and, at first sight, unattractive investigations upon wave-lengths to which the author has devoted many years. He compares himself in this respect to one who is opening a path into hitherto unexplored country; not undertaking himself to study its natural history, but trying to execute the less attractive but indispensable labor of making the road on which future investigators may travel.

20. *On the Amount of the Atmospheric Absorption.* (Am. J. Sci., III, XXVIII, 163, September, 1884.)

In this paper, it is shown, both from theoretical considerations and by experiment, that the absorption of the solar rays by the earth's atmosphere is at least double what it has commonly been supposed to be.

21. *On the Temperature of the Surface of the Moon.* (Mem. Nat. Acad. Sci., III, September, 1884.)

In this memoir, it is stated that it has been found possible to form a heat spectrum from the moon, and to analyze its different parts. The conclusion reached (which differs from that of Lord Rosse) is that the temperature of the sunlit surface of the moon can not be greatly above zero centigrade. Results of interest in connection with solar radiation are also given.

Professor Langley has published numerous other papers upon subjects connected with solar or astral physics, but it is believed that those which have now been mentioned will fully justify the recommendation of the committee.

GEORGE F. BARKER,
Chairman.

WOLCOTT GIBBS.

SIMON NEWCOMB.

ARTHUR W. WRIGHT.

CHARLES A. YOUNG.

WASHINGTON, *April* 24, 1885.

At a public session of the Academy, held on the evening of April 21, 1886, the first Henry Draper medal awarded by the Academy was presented to Prof. S. P. Langley by the president, who in a short address gave a résumé of Professor Langley's work in astronomical physics, and the reasons why the Academy had honored him with this medal.

On recommendation of the council, the Academy adopted the following resolution in April, 1885:

Resolved, That the treasurer be authorized to reserve from the income of the Draper fund, \$65 each year, and such further sum as the committee on that fund may authorize, to be invested from time to time until the invested fund is increased to \$6,000, the sum intrusted to the Academy by Mrs. Draper.

PRESENTATION OF SECOND DRAPER MEDAL.

Mr. Barker, chairman of the committee on the Henry Draper medal, reported, in April, 1887, that the committee recommended that the second Henry Draper medal be awarded to Prof. Edward C. Pickering, director of the Harvard Observatory, for his recent work in astronomical photometry and photography. This recommendation was adopted by the Academy.

The report of the committee for the award of this medal is as follows:

REPORT OF THE COMMITTEE.

To the National Academy of Sciences:

The committee on the Henry Draper medal begs leave herewith to report that it has carefully considered the investigations which have been made in astronomical physics since the award of this medal in 1885; and that, as a result of such consideration, the said committee desires to recommend that the Academy award this medal for the year 1887, to our fellow member, Prof. Edward C. Pickering, the director of the Harvard College Observatory, for his recent work in astronomical photometry and photography.

Professor Pickering was appointed to the position which he now holds in February, 1877. An examination of the annual reports which he has presented to the visiting committee of the observatory will show the

great amount and the great variety of the work which has been done there under his direction. Some of this work is purely astronomical; as an example of which, the excellent meridian circle work of Prof. William A. Rogers may be mentioned. But most of it is in the department of astronomical physics; and this it is to which the committee desires to direct attention.

The work in astronomical physics, which has been done in the observatory of Harvard College under Professor Pickering's immediate supervision, seems readily divisible into three classes: First, stellar photometry; second, stellar photography; and third, stellar spectrum photography.

I. The principal subdivisions of the photometric work are as follows:

(1) Observations of Jupiter's satellites at their disappearances in the shadow of the planet and their reappearances after the eclipse; with the object of determining the times at which these phenomena occur with greater accuracy than had hitherto been practicable.

(2) The determination of the relative brightness of all stars visible to the naked eye in the latitude of Cambridge.

(3) The determination of the relative brightness of several thousand stars of the first nine magnitudes, in order to fix the value of the arbitrary scales usually employed in estimating magnitudes.

(4) Comparisons of various objects at small apparent distances from each other, such as the components of double stars, different satellites of the same planet, etc.

(5) Numerous special investigations on proposed standards of magnitude, stars which have been used for comparison with variable stars, the light of nebulae, etc.

All this photometric work has gone uninterruptedly forward with the aid of special photometers ingeniously devised for the purpose by Professor Pickering.

The observation of the eclipses of Jupiter's satellites has long been regarded as important, not only in determining the motions of the satellites themselves, but also in ascertaining the velocity of light. It is obvious that the observation of the disappearance or reappearance of a satellite is necessarily a photometric observation, and therefore that the subject is one to which improved means of photometric research are peculiarly applicable. But previous to Professor Pickering's undertaking, no one appears to have recognized the advantages resulting from the use of photometric apparatus in the observation of these eclipses. Recently, however, these advantages have been recognized in France, and researches similar in character to those of Professor Pickering have been undertaken there.

It is not expected that the observations of the eclipses made at the Harvard College Observatory will be fully reduced and published until they have been continued through a complete revolution of Jupiter (about 12 years). The first observation of this sort was made on the

23d of June, 1878. Up to the beginning of the present year, the total number of eclipses observed was 358, thirty-nine of which had occurred since October, 1885. The accuracy with which an eclipse of the first satellite can be observed appears, from the preliminary reductions, to be very satisfactory, the probable error seeming to be less than a second of time. The eclipses of the three outer satellites will furnish results nearly as useful, since the greater number of comparisons obtained during each eclipse compensates to a considerable extent for the comparative slowness of the changes in the brightness of the object observed.

The meridian photometer of Professor Pickering was first brought into use in the summer of 1879. The work of determining by the aid of this instrument the relative brightness of the stars which are visible to the naked eye was begun on the 25th of October of that year and was continued through 700 series of observations, 4,260 stars being included in the catalogue. The total number of comparisons made was 94,476, four comparisons constituting a complete observation. These results, together with an extended discussion of the estimated magnitudes obtained for the same stars by careful observers, as well as the results of previous photometric determinations of their relative brightness, were published in Volume XIV of the Annals of the Observatory.

The success of this photometer led Professor Pickering to have a larger instrument constructed, of the same kind, but which could be applied to the measurement of telescopic stars. The new photometer has given perfect satisfaction, and has enabled the brightness of stars to the ninth magnitude to be measured with a deviation from accuracy not exceeding a tenth of a magnitude. Moreover, stars can be measured with this instrument at the rate of forty stars an hour for an entire evening; and under favorable conditions, even one star a minute may be thus measured. During the year 1886, 209 series of measurements were made by Professor Pickering and his assistant, the total number of separate photometric comparisons being 59,800. In 1885, 50,000 such comparisons were made, and in 1884, 27,500. A comparison of the Cambridge results with those obtained at Pulkowa shows that the average deviation of a measurement of the difference in brightness between two stars observed at both places does not exceed one-tenth of a magnitude. The principal work of the meridian photometer, the revision of the *Durchmusterung* magnitudes, is now approaching completion, nine-tenths of the observations having already been made.

It would seem to be manifest from the facts above enumerated, that practical stellar photometry has now been carried on for the first time by Professor Pickering to that extent and with that completeness which are requisite to give it general interest and importance.

II. The earliest investigations in stellar photography which were undertaken by Professor Pickering were begun in 1882, with the aid of a grant from the Rumford fund of the American Academy. They have

been continued subsequently by an appropriation made in June, 1885, from the Bache fund of the National Academy. The work which has been done in this direction has been summarized as follows:

"The present research was undertaken in 1882 with a lens having an aperture of only $2\frac{1}{2}$ inches. It was shown that photography could be used as a means of forming charts of large portions of the sky, and of determining the light and color of stars in all portions of the heavens. Photographs of the trails of close polar stars no brighter than the eleventh magnitude were obtained without clockwork." "In 1885, the investigation was resumed with a telescope having an aperture of 8 inches. With this, one hundred and seventeen stars within one degree of the pole, one of them no brighter than the fourteenth magnitude, left trails. The average deviation of the measures of the brightness of these stars on different photographs was less than a tenth of a magnitude; a greater accordance than is given by any other photographic method. A similar result was obtained from the Pleiades, of which group over fifty left trails. Similar trails are now being obtained of the stars north of -30° in all right ascensions. This work began in the autumn of 1885, at 23^h, and has already been completed for more than half the sky. By photographing on the same plate polar stars near their upper and lower culminations, material has been accumulated for determining the atmospheric absorption each night of observation.

"A study has been made of the application of photography to the transit instrument. Measurements of the trails show that the time of a transit may be determined from its trail with an average deviation of 0.03 second, which is about half the corresponding deviation of eye observations.

"Charts may be constructed 5° square, having the same dimensions as those of Peters and Chacornac. A single exposure of one hour is required, and it is not necessary that the observer should remain with his eye at the telescope to correct the errors of the clock. Miscellaneous observations have been secured of the Pleiades, of the nebula in Orion, of Jupiter's satellites, and of various other objects."

III. Stellar spectrum photography, in which Professor Pickering has achieved his most marvelous results, was undertaken by him first in 1885, upon a plan entirely novel. Two important features of advantage were possessed by the new arrangement. The first consisted in placing the prism in front of the object glass; a plan already suggested by Fraunhofer, and tried for eye observations by Secchi. The second consisted in placing the refracting edge of the prism parallel to the motion of the star; *i. e.*, if the star was on the meridian, the refracting edge would be horizontal, and the spectrum north and south. The first device gives not only an enormous increase of light, but renders it possible for the stars over the entire field to impress their spectra upon the plate. Hence, while previous observers have been able to photograph but one star at a time, and have not obtained satisfactory

results from stars fainter than the second or third magnitude, Professor Pickering has often obtained more than 100 spectra on a single plate, many of them of stars not brighter than the seventh or eighth magnitude. By means of the second device, the necessary width of the spectrum is secured. If clockwork were employed, the spectrum of a star would be a line too narrow to show any details. Formerly, a cylindrical lens was used to widen the spectrum; but by placing the prism as above, and by suitably varying the rate of the clock, any desired width can be given to the spectrum simply by the motion of the star itself. One millimetre was found to be the best width.

The first experiments were made in May, 1885, by placing a 30° prism in front of a lens of $2\frac{1}{2}$ inches aperture. No clockwork was used, the spectra being formed of the trails of the stars. In the spectrum of the pole star, over a dozen lines could be counted, and in that of α Lyrae, the characteristic lines were shown very clearly with an exposure of only two or three minutes. In the fall of 1885, two prisms were obtained 20 centimetres in clear aperture, and having angles of 5° and 15° , respectively. These could be placed in front of the object glass of the 8-inch photographic telescope. With this apparatus, systematic operations were begun. The research, however, proved too large for the Bache appropriation. Whereupon, Mrs. Henry Draper came forward, early in 1886, and generously offered not only to defray the expenses of the investigation as a memorial to Dr. Draper, but to put at Professor Pickering's disposal the 11-inch refractor, with its photographic corrector, with which Dr. Draper has taken many of his later stellar photographs. The investigation was thereupon extended by Professor Pickering, and divided into three parts. The first included a general survey of stellar spectra, each spectrum being photographed with an exposure of not less than five minutes. These photographs generally exhibited the spectra of all stars brighter than the sixth magnitude with sufficient distinctness for measurement. The second research related to a determination of the spectra of the fainter stars. Each photograph taken received an exposure of one hour, so that the spectra of all the stars not fainter than the eighth or ninth magnitude and included in a region 10° square were represented upon the plate. For both these investigations, the 8-inch Bache photographic telescope was employed. The third research related to a more detailed study of the spectra of the brightest stars. For this work the Henry Draper 11-inch corrected refractor was used, Mrs. Draper having provided a small observatory for it in Cambridge, and also the mounting. Four prisms were constructed, each of 15° , of which three had a clear aperture of nearly 11 inches, the fourth being somewhat smaller, the whole weighing more than 100 pounds and occupying a cubic foot of space.

The results already attained in these three directions have been satisfactory. In the first research, the first cycle, covering the entire sky from zero to 24 hours of right ascension, has been completed. This

cycle contains 257 plates, all of which have been measured, and a large part of the reduction completed. 8,313 spectra have been measured on them, nearly all of which have been identified, and the places of a greater portion of the stars brought forward to the year 1900, and entered in catalogue form. In the second cycle, which will complete the work, 64 plates have been taken, of which 51, including 2,974 spectra, have been measured and identified. In the second research, which has been carried on in the intervals when the telescope was not needed for other purposes, 99 plates, with an exposure of an hour, have been obtained, on which 4,442 spectra have been measured, in one case over 300 spectra being shown on a single plate. In both these researches taken together 15,729 spectra of bright and faint stars have been measured. In the third research, the first results of which were obtained in October last, a considerable number of excellent photographs have been obtained, the results of which can be stated only after a long series of measurements, and a careful reduction and discussion of them. Some points of interest, however, are shown on inspection. A photograph of α Cygni, taken November 26, 1886, shows that the H line is double, its two components having a difference in wave length of about one ten-millionth of a millimetre.* A photograph of Omicron Ceti shows that the lines G and H are bright, as are also four of the ultra-violet lines characteristic of spectra of the first type. The H and K lines in this spectrum are dark, showing that they probably do not belong to that series of lines. The star near X' Orionis, discovered by Gore, in December, 1885, gives a similar spectrum, which affords additional evidence that it is a variable of the same class as O Ceti. Spectra of Sirius show a large number of faint lines beside the well-known broad lines.

Professor Pickering has also devised a new method of enlarging these original photographs, which also removes the inequalities in density in the negatives, appearing as bands parallel to the length of the spectrum. A cylindrical lens is placed close to the enlarging lens, with its axis perpendicular to the spectrum lines. In this way, the length of the spectrum is increased only five times, while its width is increased nearly one hundred; *i. e.* from 1 millimetre to about 4 inches. This arrangement greatly reduces the difficulty arising from the feeble light of the star. Until very lately, the spectra in the original negatives were made very narrow, since otherwise the intensity of the starlight would have been insufficient to produce the proper decomposition of the silver particles. The enlargement being made by daylight, the vast amount of energy then available is controlled by the original negative, the action of which may be compared to that of a telegraphic relay. The copies, therefore, represent many hundred times the original energy received from the stars.

* It has long been known that the H line is also double (bright) in the spectrum of the solar chromosphere,

The deed of trust under which this committee is acting provides "that the investigation for which it (the Henry Draper medal) is awarded, or the completed publication thereof, shall have been made since the time of the last preceding award and presentation of said medal." In consequence, the committee recommends the award to Professor Pickering, for the specific investigations in stellar photometry and photography above mentioned, which have been made since the month of April, 1885, the time of the last preceding award and presentation of the said medal. This comprises, it is believed, the whole of the photographic work done at the Harvard College Observatory, and a large and important part of the photometric work.

In the opinion of the committee, Professor Pickering has displayed in these researches a skill, ingenuity, and vigor, which entitle him to an honorable place among the scientific men of our own or of any previous age.

All of which is respectfully submitted.

GEORGE F. BARKER.

CHARLES A. YOUNG.
ARTHUR W. WRIGHT.

Committee on the Henry Draper Medal.

April 21, 1887.

On the evening of April 18, 1888, at a public session of the Academy, the second Henry Draper medal was, in behalf of the Academy, presented by the president to Prof. E. C. Pickering, of the Harvard Observatory, for his work in astronomical photometry and photography.

AWARD OF THIRD DRAPER MEDAL.

At a special session of the Academy, held in Philadelphia, November 13, 1889, Mr. George F. Barker presented the following recommendation of the committee on the Henry Draper medal:

The committee on the Henry Draper medal recommend to the National Academy of Sciences the award of the Henry Draper medal to Prof. Henry A. Rowland, of Baltimore, for his researches on the solar spectrum.

This recommendation was adopted by the Academy.

THE LAWRENCE SMITH FUND.

During the April session, 1884, the president announced that the widow of Prof. J. Lawrence Smith, late an honored member of the Academy, intended to place at the disposal of the National Academy of Sciences the sum of \$8,000, as a memorial fund to promote the study of meteoric bodies.

Upon recommendation of the council, the Academy adopted the following resolution :

Resolved, That the Academy hears with gratification the announcement that Mrs. J. Lawrence Smith intends to intrust to it a fund to promote the study of meteoric bodies, and hereby signifies its readiness to accept the trust.

The Academy also adopted the recommendation of the council, "that the president be authorized to communicate with Mrs. J. Lawrence Smith, and make what arrangements were necessary."

The following is the text of the deed of gift of Mrs. Smith :

DEED OF TRUST OF MRS. J. LAWRENCE SMITH.

Know all men by these presents, that I, Sarah Julia Smith, of the city of Louisville, and county of Jefferson, State of Kentucky, in consideration of the premises, and of the acceptance of the within trust by the National Academy of Sciences, and also in consideration of divers other good and valuable considerations, I, the said Sarah Julia Smith hereto moving, have given, granted, assigned, transferred, and set over, and by these presents do give, grant, assign, transfer, and set over, unto the said National Academy of Sciences, and to their successors forever, a certain fund or sum of \$8,000, with the interest and income thereof, to have and to hold the same in trust nevertheless, upon the special trusts and for the uses and purposes following, to wit :

First. In trust, to invest and to reinvest the said sum of \$8,000, and to keep the same invested in good and safe securities, or in such other manner as shall be, in their opinion, best for the preservation and maintenance of such fund.

Second. In trust, to use the interest and income thereof for the purpose of striking a gold medal, which shall be called the "Lawrence Smith Medal," shall be of the value of \$200 in gold, and shall be struck in a die, to be selected and presented to the said National Academy of Sciences by me, the said Sarah Julia Smith. And the said medal shall be awarded and presented from time to time, by the said National Academy of Sciences, to any person in the United States of America or elsewhere, who shall make an original investigation of meteoric bodies, the results of which shall be made known to the public, such results being in the opinion of the said National Academy of Sciences of sufficient importance and benefit to science to merit such recognition ; provided, however, that said medal shall not be presented or awarded more frequently than once in 2 years, and provided, also, that the investigation for which it is awarded, or the completed publication thereof, shall have been made since the time of the last preceding award and presentation of said medal.

Third. In trust, that if investigations of equal importance shall be made in regard to meteoric bodies at or about the same time in the United States of America and also in some other part of the world, each of which investigations might, in the opinion of the said Academy, entitle the investigator to be considered as a competitor for said medal, preference shall be given in the awarding thereof to investigations made by a citizen of the said United States of America.

Fourth. In trust, that if the said die shall at any time be lost, destroyed, broken, or in any manner rendered unfit for the purpose of striking the said medal, a new die shall be procured exactly similar to the one so selected and presented as aforesaid, and shall be paid for out of the interest and income of the said fund ; and such sum or sums of money as shall at any time or times be necessary for the care, custody, and protection of the said die or of the said fund hereby given shall also be taken from and out of the interest and income of the said fund whenever the same shall be deemed necessary by the said National Academy of Sciences.

Fifth. In trust, that if at any time or times the interest and income of said trust fund of \$8,000 shall exceed the amount necessary for the striking of said medal and the care of the said die and of the fund, such surplus over and above the sum or sums

so required for the purposes of the trust, as hereinbefore recited and set forth, shall be used in such manner as shall be selected by the National Academy of Sciences in aid of investigations of meteoric bodies, to be made and carried on by a citizen or citizens of the United States of America.

And the said National Academy of Sciences doth signify its acceptance of the said fund of \$8,000, and doth engage to hold and manage the same upon the trusts and for the uses and purposes herein mentioned and set forth.

In witness whereof I, the said Sarah Julia Smith, have hereunto set my hand and seal, and the said National Academy of Sciences hath hereunto caused its corporate seal to be affixed, and these presents to be subscribed by its president, this 6th day of May, in the year 1884.

SARAH JULIA SMITH. [SEAL.]

Sealed and delivered in the presence of—

ANNIE C. NORTON.

J. H. CAPERTON. [SEAL.]

O. C. MARSH,

President of the National Academy of Sciences.

Witnesses to signature :

GEO. J. BRUSH.

E. S. DANA.

At a stated session of the Academy, held in April, 1885, the following resolutions in regard to the Smith fund were adopted upon recommendation of the council :

Resolved, That the National Academy of Sciences gratefully acknowledges the receipt of a fund of \$8,000, presented in trust by Mrs. Sarah Julia Smith to promote the study of meteoric bodies; that the Academy adopts and confirms the action of its president in accepting such trust, and promises the faithful execution of the same.

Resolved, That the Academy appreciates the confidence reposed by the donor in selecting it as the trustee for executing her purpose, and her further liberality in providing dies for a suitable medal.

Resolved, That a committee of 5 members be appointed by the president to recommend to the Academy such measures as may be necessary to the proper execution of the trust.

Resolved, That the said committee be charged with the duty of preparing an expression of appreciation by the Academy of the munificence of Mrs. Smith, and of having such expression suitably engrossed and signed by the proper officers for transmission to the donor.

Resolved, That the treasurer be authorized to reserve from the income of the J. Lawrence Smith fund, \$133 each year, to be invested from time to time until the invested fund is increased to \$8,000, the amount intrusted to the Academy by Mrs. Smith.

COMMITTEE ON THE SMITH FUND.

The president appointed as permanent committee on the Smith fund the following members :

Wolcott Gibbs, *Chairman*.

G. J. Brush.

R. Pumpelly.

A. Hall.

L. M. Rutherford.

ACKNOWLEDGMENT TO MRS. SMITH.

Mrs. SARAH JULIA SMITH:

MADAM: It is our duty as a committee of the National Academy of Sciences to tender to you the thanks of the Academy for the munificent donation which you have intrusted to it. With the most sincere appreciation of the spirit which dictated your gift, and with profound respect and sympathy, we now discharge the duty which has devolved upon us.

The noble and unselfish life of our lamented fellow member, Dr. J. Lawrence Smith, was devoted to science; and of the work which he did, and which confers eternal honor upon his name, no part is more deeply interesting or more permanently valuable than his researches on the chemical constitution of meteorites, researches in which he first established in these bodies the existence of hydrocarbon. His beautiful collection has become the property of one of our most prominent colleges. His name and fame are national possessions. The income of the fund which you have intrusted to the Academy, worthily bestowed, can not fail to assist materially in extending our knowledge of meteoric phenomena.

The Academy accepts the trust, which honors the giver, which recalls the lifelong services of one of its most honored members, and which promises to extend the boundaries of the science to which he was devoted. We tender to you, madam, in the name of the Academy, our grateful acknowledgments.

WOLCOTT GIBBS, *Chairman.*

G. J. BRUSH.

A. HALL.

R. PUMPELLY.

L. M. RUTHERFURD.

Committee.

July 27, 1885.

PRESENTATION OF FIRST LAWRENCE SMITH MEDAL.

In December, 1887, the committee on the Smith fund unanimously recommended that the first J. Lawrence Smith medal be awarded to Prof. Hubert A. Newton, of New Haven, Connecticut, in recognition of his eminent services in the investigation of the orbits of meteors. This recommendation was adopted by the Academy at the April meeting, 1888, and at a public session, held on the evening of April 18, 1888, the first Smith medal given by the Academy was presented to Professor Newton by the president, who, in a short address, gave the reasons for its award.

The report of the committee is as follows:

REPORT OF THE COMMITTEE.

To the National Academy of Sciences:

Professor Newton's study of the subject extends over a long series of years, and has led to results of very great popular interest as well as scientific importance. Meteors in the sense in which the word is now used have from the remotest ages attracted the attention of mankind. Observations of greater or less value have long been accumulating. Chemistry had shown that meteoric bodies which fall upon the earth contain no element not already known as a constituent of the

crust of the earth, but astronomy had not yet brought the wanderers of the heavens into a system and shown that they are moving in definite orbits, and are not distributed by chance in the celestial spaces. Professor Newton's first paper was published in 1860, and was succeeded by a number of others, the last having been read to the National Academy, in April of the present year.

From a careful analysis of the early observations of the archives, going back to the year 902, as well as of modern observations, Professor Newton showed that the connection between the November star showers of 1799 and 1833 had been concealed by the fact, that the day of the shower was moving from October 12, A. D. 902 to November 13, 1833. The shower was thus traced back over 900 years, and the persistence of this 33-year period was distinctly shown. It was also proved that the paths in which the meteors are moving about the sun must be one of five sharply defined orbits. A method of deciding which one of these orbits was the true one was suggested. Professor Adams of Cambridge (England) then showed in the manner indicated which orbit was the correct one, and so prepared the way for proving beyond question, as soon as Oppolzer published the orbit of the comet of 1886, that this comet and the November meteors belong to one system. Schiaparelli had just shown that the August meteors belonged to the same system as another comet.

In a memoir on shooting stars, published in the memoirs of the National Academy (read August 6, 1864), Professor Newton for the first time proved that the orbits of these bodies are not approximately circular like those of the planets, but that they resemble more the parabolic orbits of comets. This was the first step towards the establishment of a relationship between comets and meteors. In the same memoir, Professor Newton undertook to show how many shooting stars enter the air each day. The result of the discussion was the number 7,500,000, but later observations increase this number materially, and perhaps even double it. Another interesting and suggestive question also considered was this: As the earth moves round the sun, how thickly filled with meteorites is the space which it traverses? To this question, the answer given is, as a first approximation, 13,000 in each unit of space of the size of the earth itself.

In a subsequent paper, Professor Newton made an attempt to determine whether comets come originally from the solar system or from outside of it. The investigation was based upon the observed facts, and the results obtained are still under consideration by astronomers. The argument that the meteoric stones of our cabinets were all fragments of comets was again brought out in a lecture delivered at the Sheffield Scientific School. This again was followed by a paper on the effect upon the earth's velocity produced by small bodies passing near the earth. In this paper, it is shown that while small bodies which pass

near the earth, but do not meet it, have a real effect in stopping the earth or the moon, this effect is much too small to be sensible.

In a discussion of the Biela meteors of November 27, 1885, Professor Newton, among other facts, brought out the very interesting and important one, that the meteors left the comet since 1840, and that the disintegration of the comets furnishing meteor streams is a more rapid process than has been usually supposed.

Finally, in a paper read before the National Academy of Sciences, April 19, 1888, Professor Newton has established the following propositions:

(1) The meteorites which we have in our cabinets, and which were seen to fall, were originally (as a class, and with a very small number of exceptions) moving about the sun in orbits that had inclinations less than 90° ; that is, their motions were direct and not retrograde.

(2) The reason why we have only this class of stones in our collections is not one wholly or even mainly dependent on the habits of men, nor on the times when men are out of doors, nor on the places where men live, nor on any other principle of selection acting at or after the arrival of the stones at the ground. Either the stones which are moving in the solar system across the earth's orbit move, in general, in direct orbits, or else, for some reason, the stones which move in retrograde orbits do not in general come through the air to the ground in solid form.

(3) The perihelion distances of nearly all the orbits in which these stones moved were not less than 0.5 nor more than 1.0, the earth's radius vector being unity.

In the judgment of the committee, these researches are of a very high order of merit and of interest.

WOLCOTT GIBBS.

IN THE SENATE OF THE UNITED STATES.

JANUARY 19, 1891.—Ordered to be printed.

Mr. MITCHELL submitted the following

RESOLUTION:

[Directing the Secretary of War to furnish to the Senate certain information relative to selecting a site for the location and establishment of a gun factory on the Pacific coast.]

Resolved, That the Secretary of War be, and he is hereby, directed to transmit to the Senate at his earliest convenience copies of all recommendations and statements of boards of trade, chambers of commerce, and other representative commercial bodies, and of all municipal corporations, together with copies of statements, documents, and other papers whatsoever at any time heretofore presented since the 1st day of October last, either directly to the War Department or to the military board heretofore appointed under the provisions of an act of last session of the present Congress, approved August, 1890, for the purpose of examining into the facilities for producing steel forgings, and for the purpose of selecting a site for the location and establishment of a gun factory on the Pacific coast, which relate to the subject of a site for such gun factory, and submitted in the nature of information, and as showing the commercial and military importance, and other facilities of the several sites suggested to such board as proper to be considered as suitable and proper sites for such purpose.

IN THE SENATE OF THE UNITED STATES.

JANUARY 19, 1891.—Ordered to be printed.

Mr. GIBSON presented the following

**MEMORIAL FROM THE CHAMBER OF COMMERCE AND INDUSTRY
OF LOUISIANA PROTESTING AGAINST THE PASSAGE OF THE
CONGER LARD BILL.**

The undersigned respectfully represent that the amount of cotton seed crushed now exceeds 1,000,000 tons, which cost, when manufactured, an average of \$15 per ton. This sum is represented by the first cost of the raw material paid to planters, the freight paid for transportation thereon to mill points, and the labor and material used in manufacturing. In other words, the cotton-seed industry pays at mill door, mainly to the laboring classes of the South, an annual tribute of some \$15,000,000.

To levy a tax on compound lard simply means a lower price for cotton seed, and at least a curtailment, if not the complete annihilation, of the cotton seed crushing industry. The plants established throughout the South for the crushing of cotton seed have cost all of \$25,000,000, and are paying taxes on fully that much assessment. The hardship inflicted upon the laboring classes in depriving them of the revenue had from the sale and manufacture of cotton seed would also react on the State in depriving it of the revenue derived from that branch of Southern industry.

We therefore represent that to tax compound lard is to tax Southern agriculture and Southern industry to the so-called benefit of other sections, whilst in reality it benefits no one, and is indirectly a tax on the consumer, of the poorer classes of all sections of our common country, who are not able to afford to pay the price of animal lard, and are willing to accept in lieu thereof a pure, cheap, and wholesome substitute.

We trust that an appeal to the manhood and innate sense of justice and fair play of Congress will be sufficient to defeat this obnoxious measure, and to have our industries left untrammelled and untaxed.

Respectfully,

T. R. Roach, acting president; Robert Bleakley, secretary Chamber of Commerce and Industry; Chas. Garvey, president the D. & L. Exchange; C. E. Dirmeyer, secretary the D. & L. Exchange; J. C. Morris; R. M. Walmsley; Wm. Palpey; Geo. S. Whitney; N. B. Sligh; S. O. Thomas; W. P. Nicholls; H. Gardes; Fred. Peters; P. Lanaux, Wm. Palpey; A. Bennet; Jas. J. Tarleton; N. Landey; H. D. Hopkins; C. Kohn; Thos. Herndon; J. L. Herring, president; Asa Brinkman, secretary; W. I. Hodgson, president board of auctioneers and auctioneers' exchange, W. A. Kernaghan, secretary; L. M. Finley, president F. U. Association of New Orleans, George Mather, secretary; by authority of the board of directors, The Louisiana Sugar and Rice Exchange of New Orleans, Samuel Delgado, president, attest D. D. Colcock, secretary; Charles Chaffer, president New Orleans Cotton Exchange.

IN THE SENATE OF THE UNITED STATES.

JANUARY 22, 1891.—Ordered to be printed.

Mr. GIBSON submitted the following

A M E N D M E N T S

Intended to be proposed by Mr. GIBSON to the resolution of Mr. ALDRICH (Mis. Doc. 33), proposing certain amendments to the rules of the Senate, viz: Omit the part in brackets and insert the parts printed in *italics*:

Resolved, That for the remainder of this session the rules of the Senate be amended by adding thereto the following:

When any bill, resolution, or other question shall have been under consideration for a reasonable time it shall be in order for any Senator to demand that debate thereon be closed. On such demand no debate shall be in order, and pending such demand no other motion except one motion to adjourn shall be made. If such demand be seconded by a majority of *two-thirds* of the Senators present, the question shall forthwith be taken thereon without debate. If the Senate shall decide to close debate on any bill, resolution, or other question, the measure shall take precedence of all other business whatever, and the question shall be put upon the amendments, if any then pending, and upon the measure in its successive stages according to the rules of the Senate, but without further debate, except that every Senator who may desires hall be permitted to speak upon the measure, including all amendments, not more than once, and not exceeding [thirty minutes] *one hour*.

After the Senate shall have decided to close debate as herein provided, no motion shall be in order but a motion to adjourn or to take a recess, when such motions shall be seconded by a majority of the Senate.

When either of said motions shall have been lost or shall have failed of a second, it shall not be in order to renew the same until one Senator shall have spoken upon the pending measure or one vote upon the same shall have intervened.

Pending proceedings under the foregoing rule no proceeding in respect of a quorum shall be in order until it shall have appeared on a division or on the taking of the yeas nays that a quorum is not present and voting.

Pending proceedings under the foregoing rule all questions of order, whether upon appeal or otherwise, shall be decided without debate, and no obstructive or dilatory motion or proceedings of any kind shall be in order.

For the foregoing stated purposes the following rules, namely, VII, VIII, IX, X, XII, XIX, XXII, XXVII, XXVIII, XXXV, and XL are modified.

IN THE SENATE OF THE UNITED STATES.

JANUARY 22, 1891.—Ordered to be printed.

Mr. STEWART submitted the following

AMENDMENTS

Intended to be proposed by Mr. Stewart to the resolution of Mr. Aldrich (Mis. Doc. 33) proposing certain amendments to the rules of the Senate, viz:

Strike out all after the word "whatever," in line 13, down to and including the word "debate," in line 17, and insert the following: "and debate on pending amendments and such amendments as may be offered while the measure is under consideration shall be limited as provided in rule 8."

After the word "motion," where it occurs the second time in line 22, insert the following: "to recommit with or without instructions, to lay on the table."

Strike out all of lines 29, 30, 31, and 32.

After the word "rule," in line 33, insert the following: "rule 17 shall be suspended, and."

IN THE SENATE OF THE UNITED STATES.

JANUARY 22, 1891.—Ordered to be printed.

Mr. DOLPH submitted the following

RESOLUTION:

Resolved, That the Committee on the Judiciary be, and they are hereby, directed to inquire and report to the Senate, at as early a day as practicable, whether clause 3 of rule 5 of the rules of the Senate is such a compliance with the requirements of section 5 of article 1 of the Constitution as to the manner in which the attendance of absent members may be compelled, as to authorize less than a quorum of the Senate when in session to compel the attendance of absent members, and whether a direction by the Senate, less than a quorum being present, to the Sergeant-at Arms of the Senate to compel the attendance of absent members as provided for in said third clause of rule 5 is a sufficient warrant and authority to the Sergeant-at-Arms to authorize him to use force if necessary to bring such absent Senators into the Senate chamber.

IN THE SENATE OF THE UNITED STATES.

JANUARY 22, 1891.—Presented by Mr. COCKRELL, and ordered to lie on the table and be printed.

MEMORIAL OF THE MECHANICS' EXCHANGE OF ST. LOUIS, MO.,
PRAYING THE PASSAGE OF THE TORREY BANKRUPT BILL.

ROOMS OF THE MECHANICS' EXCHANGE,
St. Louis, January 13, 1891.

To the Senate and House of Representatives in Congress assembled:

The Mechanics' Exchange of St. Louis hereby submits an address to your honorable body praying for the immediate consideration and passage of the Torrey bankrupt bill, as follows:

First. The members of this exchange, in common with the members of the industrial, commercial, and professional world, hereby call the attention of your honorable body to the fact that you have not for 11 years exercised the power conferred solely upon you to enact a national bankrupt law as provided by the Constitution of the United States.

Second. The mechanics of the country are vitally interested in the general prosperity of the whole people, because in times of depression and distrust occupations which give employment to them are greatly curtailed; in times of prosperity they are interested in having their rights protected. They have no desire to obtain preferences as against their fellows or others, and therefore ask for such legislation as will substitute equitable provisions, securing the quick and cheap pro rata distribution of the assets of bankrupts as a substitute for the "grab game," pursuant to which creditors who first take alarm are enabled to collect the amount of their claims while others realize nothing, and the debtor suffers the losses incident to the shrinkage of property and sacrifice sales, and pays costs which are for the most part exorbitant and unnecessary.

Third. The members of this exchange, acting in their capacity as employés and creditors of firms, persons, and corporations for whom they have in hand important undertakings, or as debtors in the purchase of supplies and employers of labor, are interested in a law which shall give and guaranty to them reciprocal rights and responsibilities and amply and fully protect the interest of those who deal with them, and hereby express the belief that the enactment of a voluntary to the exclusion of an involuntary bankrupt law, or the reverse, would prove destructive to their best interests and those of the country.

Fourth. Attention is called to the fact that the stringency of the times is not due to the absence of money, but to a want of confidence, and that the attempt to throw additional money into circulation will be unavailing so long as the tendency prevails to hoard it, whereas the

passage of an equitable law, the provisions of which would prevent precipitate action by creditors, fraudulent acts by debtors, and guaranty and protect the rights of all classes to transactions on credit, would at once relieve the stringency of the times and restore trade to its normal condition.

Fifth. There is not now pending a single bill which would, to the same extent as the bankruptcy bill, if enacted, give relief to the insolvent debtors of the country or so enhance the prospects of the solvent debtors by extending their lines of credit and guarantying them from unnecessary or malicious attacks from their creditors; such security to creditors against their dishonest debtors and thereby enhance their property rights; or to the same degree beget a spirit of hope and security and redound to the benefit of all classes of people in all parts of the country.

In view of the foregoing this exchange submits the following:

Resolved, That the Mechanics' Exchange of St. Louis, in common with the members of the industrial, commercial, and professional world, hereby calls upon Congress to exercise the power conferred solely upon it to pass uniform laws upon the subject of bankruptcies.

Resolved, further, That the enactment and proper administration of a national bankrupt law will add to the general prosperity of the whole people, because it will tend to lessen the number of periods of depression and distrust, protect the rights of the members of the industrial world at all times, prevent the giving or receiving of preferences, provide for the speedy and economical pro rata distribution of the assets of bankrupts, and prevent the seizing of the property of debtors by some of their creditors in violation of law and in derogation of the rights of the debtors and other creditors.

Resolved, further, That the members of this exchange, in their capacities both as creditors and debtors, call for the enactment of a law which shall contain both the voluntary and involuntary systems, and thereby provide reciprocal rights and responsibilities for parties to the same transaction in their capacities as creditor and debtor.

Resolved, further, That Congress is called upon to relieve the present depressed condition of the country by the enactment of the Torrey bankrupt bill.

Resolved, further, That this exchange regards the subject of bankruptcy as the most important now pending before Congress, and therefore urgently petitions for the immediate consideration of that subject.

Resolved, further, That copies of this address be sent by our officers to our Senators and Representatives in Congress.

A true copy from the records.

[SEAL.]

RICHD. WALSH,
Secretary.

[St. Louis Mechanic and Tradesman, published weekly by William Wilson & Co., proprietors, 926 North Broadway. S. Sheldon, editor.]

ST. LOUIS, January 3, 1890.

A commercial transaction must have two parties to it, the buyer and the seller, who become the debtor and the creditor until the matter is settled. Before this consummation is reached misunderstandings may spring up and difficulties may arise to prevent such settlements in due course. Most of these are arranged amicably, though the aid of the law is not unfrequently called in; but a great difficulty has arisen, and one which the law has so far dealt with in a very unsatisfactory way, in cases where the debtor is unable to discharge his liabilities in full.

It ought, of course, to be possible for an honest man who finds himself so situated to disclose his condition fully to his creditors, and let them decide whether they will accept what he is able to pay, and discharge him from further obligation, or will wind up his estate and divide the proceeds pro rata. But he can not hope to do this now, for the moment he admitted his condition his property would be attached by some smart creditor and the arrangement rendered impossible. He might, it is true, make an assignment, but, then, small creditors are very apt to make themselves felt by objecting to any compromise unless they are paid in full; and the expenses of the assignee, etc., soon make the deficiency seriously larger.

Attempts have been made from time to time, in this and other countries, to meet the difficulty, with more or less success. We had a bankruptcy law which was repealed in 1879, and now, under existing State laws the rights of creditors are governed by forty-two different codes, the variance of which, and the difficulties that naturally arise under them, causing vexatious delays and increasing the expenses which, of course, in the end come out of the debtor's property. Under most of these State laws preferences may be given, and strong creditors are naturally apt to obtain them; so that one debt is paid, while another equally valid and due, is left out in the cold. The provisions which most of the State laws contain against dishonesty on the part of a debtor have been found to have no value for commercial purposes, especially where the creditor and the debtor are citizens of different States.

For these and other reasons the necessity for a stable and equitable law is very evident, and we think that the bill now before Congress, known as the Torrey bankrupt bill, has been wisely framed, and should become law at as early a date as possible. It is plain and concise in its language, and can readily be understood by the average citizen. Each subject has a chapter to itself, subdivided into sections which have titles and consecutive numbers. While it will, of course, supersede such State laws as are actually bankrupt laws, it avoids interference with all which are not bankrupt laws in the strictest sense, and thus escapes the complications which mainly caused the repeal of the old law.

The honest insolvent debtor will, under its provisions, be discharged from the amount of debt that may be left after the dividends accruing from his estate shall have been paid, while the dishonest insolvent will be punished according to the gravity of his offense, such punishment being awarded by the courts having jurisdiction in the State where the offense has been committed. The preventive effect of this will have a value which, from a commercial point of view, can hardly be overestimated. The honest debtor feeling that if he acts in accordance with the law he will be protected, will not be so strongly tempted to provide for those dependent on him by fraudulent transfers of property; nor will he be so liable to yield to the pressure of a powerful creditor and give him an unjust preference, while the small creditor will not be able to block the way to a compromise by his demand for payment in full. Justice will thus be done, not only between debtor and creditor, but also between one creditor and another.

The Torrey bankrupt bill provides for a prompt return of process issued in bankruptcy proceedings, for a prompt hearing and a speedy determination of the rights of all parties interested. Then it can be determined at once whether a composition is desired, or administration is considered necessary; and if the latter, prompt action will be taken by the court. The trustee is appointed by the creditors to represent their interest, and is paid a commission figured on the amount actually paid as dividends. The administration of bankrupt estates, under this law, will thus be both speedy and economical.

Mr. Jay L. Torrey, the well-known lawyer of this city, is the author of the bill we have been considering, and he has spared neither time nor trouble in perfecting it. Ten thousand copies of the bill were printed and distributed at the beginning of the movement; and these were accompanied by an invitation to criticism. In response to this, many valuable suggestions were received, and acted upon by Mr. Torrey—the only end in view by the author and promoters of the bill being the enactment of a wise and perfectly fair law. Such a law will do much to strengthen confidence in the minds of business men generally, and as a natural consequence will promote the prosperity of the country.

IN THE SENATE OF THE UNITED STATES.

JANUARY 22, 1891.—Presented, referred to the Committee on the District of Columbia, and ordered to be printed.

REPORT OF THE BRIGHTWOOD RAILWAY COMPANY, OF THE
DISTRICT OF COLUMBIA.

WASHINGTON, D. C., *January 24, 1891.*

To the Senate of the United States of America in Congress assembled :

In accordance with the terms of the charter of the Brightwood Railway Company of the District of Columbia, we have the honor to transmit to you for your information the following report:

(1) Since January 1, 1890, the road has been operated by the Metropolitan Street Railway Company, under verbal lease, pending the introduction of Mechanical Traction, known as "The Judson Pneumatic system." That this system is in process of construction still, and it is believed by the officers of the company, will be completed and in operation within the coming year from this date.

The motive power to be used in this system is compressed air, and a suitable site has been procured and a power house and an air compressing plant erected thereon. This plant is located on the east side of Seventh street extended, opposite Grant street.

(2) The gross receipts from the aforesaid lease have been \$635.35.

(3) The stockholders of this company at this date are as follows:

Name.	Shares.	Name.	Shares.
Harry L. Earle	1, 170	A. P. Fardon	1
H. D. Cooke	1	A. A. Thomas	3
Pitt Cooke	1	Frederick Stutz	20
F. W. Huidekoper	1	Lewis Walker	1
J. H. Taylor	1		
W. W. Dudley	1	Total	1, 200

(4) The officers of this company are as follows:

H. D. Cooke, vice president.

H. L. Earle, treasurer.

James H. Taylor, secretary.

Directors: H. D. Cooke, H. L. Earle, F. W. Huidekoper, Lewis Walker, W. W. Dudley, James H. Taylor, A. P. Fardon, Pitt Cooke, W. L. Judson.

We, the undersigned, do hereby certify to the correctness of the above statement.

HENRY D. COOKE.

Vice President.

JAMES H. TAYLOR,

Secretary.

Sworn and subscribed to before me this 24th day of January, A. D. 1891.

[SEAL.]

ROBT. V. HUGHES,

Notary Public.

IN THE SENATE OF THE UNITED STATES.

JANUARY 28, 1891.—Ordered to be printed.

The Vice President laid before the Senate the following

COMMUNICATION FROM THE COMMISSIONER OF FISHERIES IN
RESPONSE TO A RESOLUTION OF THE 18TH ULTIMO RELATIVE
TO THE ESTABLISHMENT OF A FISH HATCHERY IN NORTHERN
NEW YORK.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., January 26, 1891.

SIR: In obedience to Senate resolution of December 18, 1890, directing the United States Commissioner of Fish and Fisheries to report to the Senate as to the desirability of the establishment of a fish hatchery in northern New York, near the St. Lawrence River, I have the honor to report as follows:

The basin of the St. Lawrence, including Lake Ontario and Lake Champlain and the innumerable smaller lakes and tributary streams which drain into these, comprises fully one-half of the area of the State of New York, about one-fourth of the State of Vermont, and on the Canadian side a more considerable drainage area.

In Lake Ontario whitefish were formerly very abundant. The value of this fishery has declined year by year, and at present the production is relatively insignificant compared with the whitefish fisheries of Lake Erie, Lake Huron, and Lake Michigan.

In the waters referred to a like decline was in progress, but those who were interested in those fisheries were prompt to recognize the necessity of legislation to restrain and regulate the methods and apparatus and seasons of capture.

Artificial propagation was also systematically resorted to to supplement and reinforce natural reproduction, and whitefish hatcheries were established by the States of Michigan, Ohio, and Wisconsin and by the Canadian Government. Entering the field at a later date, the United States Commission has established stations for the collection and hatching of whitefish at Alpena, Mich., Duluth, Minn., and Put-in Bay, Ohio.

The result of this coöperative fish-culture work by the Canadian, State, and United States Fish Commissions has been not only to arrest the alarming decline that was in progress, but to determine a marked increase in the catch of whitefish in those waters in which fish-cultural work has been carried on.

The marked contrast between the present conditions of the whitefish fisheries of Lake Erie and Lake Ontario sharply defines and emphasizes the necessity of artificial propagation as a means of maintaining and

improving our important commercial fisheries and of creating such in waters where they have not before existed.

We can not afford to neglect so important an economic resource—one which gives such substantial and valuable returns for moderate expenditures.

We can not expect individual enterprise to undertake such work in public waters in the expectation of private gain. Men, however public-spirited, will not sow the seed of a harvest which all men may gather. Our lakes and rivers and coast waters must be farmed by the Government for the general use and under such regulations as will establish and maintain the largest production.

Another important commercial species which formerly existed in Lake Ontario in marvelous abundance, but which is now so rare as to be an object of curious interest when seen, is the Atlantic salmon. Sixty years ago each season it ascended the St. Lawrence in vast numbers and swarmed in all its tributaries. Following both shores of Lake Ontario it ascended all the smaller streams which fall into it and which afford suitable spawning grounds for the mature fish and favorable nurseries for the fry during their period of river life.

The following extract from the annual report of the department of marine and fisheries of Canada for the year ending June 30, 1869, will be instructive as well as suggestive:

SPECIAL REPORT OF MESSRS. WHITCHER AND VENNING ON FISH-BREEDING AT NEW CASTLE, ONTARIO.

We proceeded yesterday to New Castle, Ontario, in compliance with your directions, and made a personal inspection of the fish-breeding establishment there under charge of Mr. Wilmot. The premises are situated on Baldwin's or Wilmot's Creek, a small stream traversing the township of Clarke, in the county of Durham, and discharging into Lake Ontario about 40 miles east of Toronto. This creek is well situated for salmon, as it forms a natural inlet of the sheltered bend of the lake between Bend-head and Darlington.

Although at its entrance into the lake it passes through a marshy lagoon, the bed of the stream farther inland is of a gravelly nature and the water is pretty clear, regular, and lively in its flow.

In early times it was famous for salmon, great numbers of which frequented it every autumn for the purpose of spawning. They were so plentiful 40 years ago that men killed them with clubs and pitchforks, women seined them with flannel petticoats, and settlers bought and paid for farms and built houses from the sale of salmon.

Later they were taken by nets and spears, over 1,000 being often caught in the course of one night.

Concurrently with such annual slaughter manufactories and farming along the banks had obstructed, fouled, and changed the creek from its natural state and made it less capable of affording shelter and spawning grounds.

Their yearly decreasing numbers at length succumbed to the destruction practiced upon them each season from the time of entering the creek until nearly the last straggler had been speared, netted, or killed.

The history of the salmon fishery of Wilmot's Creek, so graphically told by the Canadian commissioners, has been repeated in every stream of the State of New York which drains into Lake Ontario and the St. Lawrence River. All were frequented by the salmon, and from each, each season, went out a numerous colony of parr and smolts, which descended the St. Lawrence to the gulf, where they remained until they had attained size and maturity, when, obeying the impulse of reproduction, they ascended the St. Lawrence and distributed themselves to all the tributaries of lake and river, carrying back to these inland waters the rich harvest of the sea which they had garnered.

This magnificent fishery has ceased to be. Did it exist to-day, and were the conditions which made such a fishery possible prevailing to-

day, a hundred streams now barren would afford salmon fishing as attractive as the more favored waters of Canada, and the catch by net in the lake itself would furnish the motive of a valuable commercial fishery.

The cause of the disappearance, practically, of salmon from the streams of the St. Lawrence Basin has been chiefly and primarily the erection of obstructions in all of the rivers, which have prevented the salmon from reaching their spawning-grounds, and so natural reproduction has been absolutely inhibited.

The restoration and maintenance of the white-fish fisheries of Lake Erie, or of the salmon fishery of the lake and rivers, would either of them furnish sufficient motive for liberal expenditures on the part of the Government, if we consider the matter from a purely practical and economic standpoint. It is not only possible, it is entirely practicable, to restore and maintain these fisheries by adequate recourse to means and agencies entirely within our control.

The regeneration of the fisheries must be accomplished through fish-cultural work, systematically and persistently pursued. Their maintenance must be assured by concurrent regulation of the lake fisheries by the United States and Canada and by the enforcement on the part of the State of New York of such regulations and requirements as will permit the salmon to ascend to their spawning-grounds. In the absence of such regulations and requirements it will not be reasonable to expect that the results of fish-cultural work will be permanent or compensating, however extensive such work may be.

A fish-cultural station planned to meet all the requirements must be very extensive and complete in all its appointments, and will involve a larger expenditure than would be required for a station devoted exclusively to the production of whitefish or the salmonidæ. The hatchery must be commodious, providing at once for the hatching of 100,000,000 of whitefish and for the incubation of 1,000,000 salmon ova. It must also provide trough accommodations for holding 1,000,000 salmon fry for some weeks after they begin feeding. Quarters, offices, storage rooms, and shops must be erected; an extensive system of ponds for rearing the salmon must be constructed, for none would be released in open waters until they were of sufficient size to have comparative immunity from capture by other fish.

At the first installation of the station and for several years it would be necessary to draw our supplies of whitefish ova from our collecting stations on the upper lakes and our salmon ova from Maine. With the improvement of the fisheries we should expect to find our eventual source of supply in Ontario waters, and the location of the station should be with reference to this. Wherever placed it should be convenient to transportation routes, and should control a gravity water supply which should be without stint or measure.

The cost of such a station, as I have indicated, complete in all its appointments, would not be less than \$20,000, exclusive of cost of site and water franchises, and for its maintenance there would be required an appropriation of \$9,000 per annum.

Respectfully,

MARSHALL McDONALD,
U. S. Commissioner of Fisheries.

Hon. LEVI P. MORTON,
Vice President.

LETTER
OF THE
COMMISSIONERS OF THE DISTRICT OF COLUMBIA,
TRANSMITTING

A report upon the cost of gas and electric lighting in the District of Columbia.

JANUARY 28, 1891.—Referred to the Committee on the District of Columbia, and ordered to be printed.

OFFICE OF THE COMMISSIONERS, D. C.
Washington, D. C., January 27, 1891.

SIR: The Commissioners of the District of Columbia have the honor to transmit herewith a report, prepared under the direction of the Engineer Commissioner, on the cost of gas and electric lighting for municipal purposes in the District of Columbia, in compliance with the following provision of the District appropriation act, approved August 6, 1890:

That the Commissioners of the District of Columbia shall investigate, ascertain, and report to the second session of the Fifty-first Congress what deduction may be made for gas and electric lighting, both for annual and for five-year and for ten-year contracts, and that they be authorized to invite proposals for supplying said light at reduced rates, and in this they are not limited to any one system.

This report has been approved by the Board of Commissioners.
Respectfully,

J. W. DOUGLASS,
President Board of Commissioners, D. C.

Hon. LEVI P. MORTON,
President United States Senate.

OFFICE OF THE ENGINEER COMMISSIONER,
Washington, D. C., January, 28, 1891.

SIR: Complying with your instructions, I have the honor to submit the following report upon the cost of gas and electric lighting in the District of Columbia.

The provision of law under which this report is made, is contained in the act making appropriations for the expenses of the District of Columbia for the fiscal year ending June 30, 1891, and for other purposes, approved August 6, 1890, and is as follows:

Provided further, That the Commissioners of the District of Columbia shall investigate, ascertain, and report to the second session of the Fifty-first Congress, what deduction may be made for gas and electric lighting, both for annual and for five-year and ten-year contracts, and that they be authorized to invite proposals for supplying said light at reduced rates, and in this they are not limited to any one system.

2 GAS AND ELECTRIC LIGHTING IN DISTRICT OF COLUMBIA.

Under this provision the Commissioners advertised for proposals, using the form of advertisement hereto appended. Letters were also written to the Washington and Georgetown gas companies, the present contractors for gas lighting, and to the United States Electric Lighting Company, which now maintains the public arc lamps.

Copies of these letters are also appended.

Eight replies in all were received in response to the Commissioners' advertisement and letters of inquiry. Copies of the advertisement and the replies are to be found in the appendix. Some of the letters are much more definite than others in respect to the terms offered, which may be tabulated as follows:

Propositions for gas lighting, 1890.

Company.	Annual contract.	Five-year contract.	Ten-year contract.
Washington Gaslight Co. (6 cubic feet per hour):			
2,600 hours per year.....	\$20 per lamp per year.	\$19.50 per lamp per year	\$19 per lamp per year.
3,000 hours per year.....	\$22 per lamp per year.*	\$21.50 per lamp per year	\$21 per lamp per year.
Georgetown Gaslight Co. (6 cubic feet per hour):			
2,600 hours per year.....	\$20 per lamp per year.	\$19.50 per lamp per year	\$19 per lamp per year.
3,000 hours per year.....	\$22 per lamp per year.*	\$22 per lamp per year.	\$22 per lamp per year.
American Gas Controller and Fixture Co. ("Arc Gas Light").	\$72.50 per lamp per annum first year.	\$47.50 per lamp per year for second year and all succeeding years, not less than three.	\$47.50 per lamp per year for second year and all succeeding years, not less than three.

* In separate communication.

Propositions for electric lighting, 1890.

United States Electric Lighting Co. (arc lamps, 2,000 nominal candle-power, sunset to sunrise, every night).	60 cents per lamp per night.	54 cents per lamp per night.	51 cents per lamp per per night.
Electric Heat and Power Co. of the United States—			
I. (Arc lamps, 2,000 nominal candle power, sunset to sunrise, every night.)		45 cents per lamp per night.	45 cents per lamp per night.
II. (Incandescent lamps, 25 candle-power, 2,600 hours per year.)		\$15 per lamp per year.	\$15 per lamp per year.

GAS LIGHTING.

A comparison of the above propositions for gas lighting with those submitted in 1889* shows little difference between the two, so far as regards prices for annual and for 5-year contracts. Both companies, however, submit this year the figures at which they are willing to undertake the maintenance of the street lamps for 3,000 hours per annum, instead of 2,600 hours, as at present. These figures deserve serious attention, because experience has fully demonstrated that so long as the number of hours of burning is restricted to a yearly total of 2,600, the gas-lighting service will fail to give satisfaction to the public. Complaint as to the shortness of the hours of lighting is general, both on the part of residents and of visitors.

Just how far Washington is behind other cities of the country in this matter, the following list will show:

* See Senate Mis. Doc. No. 6, Fifty-first Congress, first session.

TABLE 1.—Hours of gas lighting per annum, December, 1890.

Cities.	Population Eleventh Census.	Number of hours of lighting per lamp per year.
New York.....	1, 513, 501	4, 000
Chicago.....	1, 098, 576	3, 786. 2
Philadelphia.....	1, 044, 894	3, 880. 5

Allegheny.....	104, 967	2, 400
Average of 23 cities, not including Washington.....		3, 480. 5
Washington.....	229, 796	2, 600

It will be seen that Washington has only about 75 per cent of the average yearly number (3,480) of hours of lighting for the other twenty-three cities given in the list; in other words, that the annual period of gas lighting now prescribed must be increased by one-third, in order to place Washington on an equality in this respect with the other large cities of the country. I therefore urgently recommend that action be taken towards securing an extension of the number of hours of lighting to not less than 3,000 per annum.

The Washington and Georgetown Gas Light Companies are willing to furnish the gas, and perform the lighting service, as at present, under an annual contract, for 2,600 hours per annum, at the price now paid, or \$20 per lamp; and for 3,000 hours at \$22 per lamp.

The proposed increase in cost for the 3,000 hours' service under an annual contract, is not proportionate to the gain to the public, as may be seen from the following proportion:

$$2,600 \text{ hours} : 3,000 \text{ hours} :: \$20.00 : \$23.08.$$

In other words, both gas companies, under an annual contract, are willing to make a reduction of \$1.08 from the price for 3,000 hours of lighting per year, as computed directly from the cost of the existing 2,600-hour service.

Under a 5-year contract the Washington Gas Light Company will light the lamps 2,600 hours for \$19.50 per lamp per year, and \$21.50 for 3,000 hours. For a 10-year contract the corresponding figures are \$19 for each lamp burning 2,600 hours, and \$21 for each lamp burning 3,000 hours.

The Georgetown Gas Light Company is willing to undertake a 5-year contract for the 2,600-hour service at \$22 per lamp per year; under a 10-year contract this company will furnish 2,600 hours of lighting at \$19 per lamp per year, and 3,000 hours at \$22 per lamp per year.

In order to compare the prices submitted for 3,000 hours of lighting, it is assumed for the present that the price now paid, namely, \$20 for 2,600 hours, is a fair one.

For 3,000 hours of lighting per year the prices bid by the Washington Gas Light Company, namely, \$22 per lamp for an annual contract, \$21.50 for a five-year contract; and \$21 for a ten-year contract, appear to me to be reasonable, but I can not say the same of the terms submitted by the Georgetown Gas Light Company for 3,000 hours lighting under 5 and 10-year contracts, as they do not follow logically from the corresponding figures for 2,600 hours. These conclusions are based upon the following proportions:

$$2,600 : 3,000 :: 20.00 : 23.08$$

$$2,600 : 3,000 :: 19.50 : 22.50$$

$$2,600 : 3,000 :: 19.00 : 21.92$$

The last terms of the above proportions represent the prices for 3,000 hours, computed directly from the figures presented by both companies for 2,600 hours.

A comparison of the two sets of bids may be made by subtracting from these computed prices the actual bids for 3,000 hours, as follows:

Washington Gaslight Company.

One year.	Five years.	Ten years.
\$23.08 22.00	\$22.50 21.50	\$21.92 21.00
1.08	1.00	.92

Georgetown Gaslight Company.

\$23.08 22.00	\$22.50 22.00	\$21.92 22.00
1.08	.50	— .08

From the above it will be seen that in bidding upon 3,000 hours of lighting for each term of contract, the Washington Gaslight Company makes an average reduction of \$1 per lamp per annum from the figures computed directly from the prices bid for 2,600 hours.

Under like conditions, however, the Georgetown Gaslight Company, while proposing a reduction from the computed price, of \$1.08 per lamp for 3,000 hours under an annual contract, diminishes this reduction to 50 cents per lamp for a 5-year contract, and for 10 years increases the bid to 8 cents above the computed price.

In the present condition of the art of street lighting I believe that 10 years is too long a time to enter into a contract for any kind of light.

Considering, however, that by an increased expenditure of \$1.50 per lamp per year, or 7½ per cent of what is now paid under annual contracts, the service can be extended to 3,000 hours, a period between 15 and 16 per cent longer than at present, I believe it would be advantageous to enter into a 5-year contract with the gas companies to light the lamps 3,000 hours per annum at a cost of \$21.50 per lamp, unless the same favorable rate can be secured for a shorter period.

It should be distinctly understood that the Washington Gaslight

Company bases its proposition concerning a 10-year contract upon the condition that the District will enter into an agreement with that company for not less than 5,000 lamps per annum. By the end of the current fiscal year this company will have in service about that number of lamps.

The existing rate of \$20 per lamp per annum for 2,600 hours of lighting under an annual contract, is the basis upon which rest all the other prices submitted for gas lighting. It therefore becomes important to compare this price with the charges obtaining in other cities, in order to determine whether it is or is not reasonable.

The following table gives the comparison for 23 cities, which by the Eleventh Census were shown to have a population of 100,000 or more. This table has been compiled with great care from data obtained by actual correspondence. No reply concerning gas lighting was received from New Orleans, while it appears that in Pittsburgh, Detroit, and Denver the streets are not lighted by gas.

TABLE 2.—*Cost of street lighting by gas, December, 1890.*

Washington, 5-year contract		6	3,000	18,000	21.50	.00717	1.19

* On January 1, 1891, there were 5,317 public gas lamps in Washington, not including 312 maintained by the United States.

It will be observed from the above table that in Washington the consumption of gas per lamp per hour is about one-third greater, and the annual period of lighting per lamp about one-fourth less than the average; while the prices submitted for 2,600 and 3,000 hours of lighting, under either an annual or a 5 year contract, and the prices per thousand cubic feet of gas, including service of lamp and minor repairs, are considerably less than the average. The average price paid per thousand cubic feet of gas burned, including service of lamp and minor re-

pairs, is \$1.54. The corresponding price now paid in Washington is \$1.28, or 82 per cent. of the average; the price proposed by the Washington Gas Light Company for a 5-year contract, lighting 3,000 hours per annum, is at the rate of \$1.19 per thousand cubic feet, or only 77 per cent. of the average. It also appears, that without regard to the hourly consumption of gas, the average cost of maintaining the public gas lamps is a little under 7 mills per hour. This is slightly lower than the corresponding figures for Washington, but computing the average cost per lamp per hour according to the hourly consumption of gas, this average would be increased to about 9 mills per hour, as follows :

$$4.55 : 6 :: .00691 : .00911$$

It therefore appears that in this respect also, the existing and proposed figures for Washington are favorable to the municipality.

HIGH-POWER GAS LAMPS.

A proposition was received from the American Gas Controller and Fixture Company, of Springfield, Mass., to light the streets with the "arc gas light" at \$72.50 per lamp for the first year, and \$47.50 for the second year, and all succeeding years, not less than three. Due, however, to the proposed increase in the number of hours of lighting, from 2,600 to 3,000 per annum, there has been submitted a second proposition, a copy of which will be found in the appendix.

The agent of this company suggests that this light can be advantageously substituted for the electric arc light, or the ordinary gas street lamp. These claims are very broad, as the two kinds of lighting proposed to be superseded are totally distinct in character. The Commissioners have authorized a test to be made of this lamp at the risk and expense of the company, and it is now in service on Connecticut avenue, between K street and Dupont Circle. The light is quite soft and agreeable, and its increased illuminating power over that of the ordinary street gas lamp is very noticeable, but the time during which it has been under my observation is too limited to justify any present decision for or against its adoption.

Within the past few days there have also been on exhibition on New Hampshire avenue near Dupont Circle, some of the "Gordon" high-power gas lamps, belonging to the Siemens-Lungren Gas Lamp Company, of Baltimore.

ELECTRIC LIGHTING.

Two letters were received; one from the present contractor, the United States Electric Lighting Company, and one from the Electric Heat and Power Company of the United States. The former does not contemplate any reduction from the present contract price of arc lights under an annual contract, but suggests that under a 5-year contract the present rate might be lowered 10 per cent. and under a 10-year contract 15 per cent. The price now paid is 60 cents per lamp per night, or \$219 per year, and the prices suggested for 5-year and 10-year contracts are respectively 54 and 51 cents per lamp per night, or \$197.10 and \$186.15 per annum.

The Electric Heat and Power Company of the United States does not consider an annual contract, but proposes to enter into a 5 year or a 10-year contract for arc lights of 2,000 nominal candle power at 45 cents per lamp per night, or \$164.25 per annum, each lamp to burn every

night from sunset to sunrise; and for 25-candle power incandescent lamps (2,600 hours each) at \$15 per lamp per year.

It is difficult to arrive at any proper basis upon which to compare prices. Both the companies in question contemplate the entire use of underground wires so far as concerns their public lighting service, but the second company named has at this time no plant in existence in the District of Columbia. Thus far Washington appears to be the only city in the United States in which all the public arc lamps are maintained wholly by means of underground wires.

In New York City the prices paid during 1890 for nominal 2,000 candle-power arc lights burning all of every night, averaged 32.5 cents per lamp per night, where overhead wires were used, and 46.1 cents for underground circuits. The only lamps operated entirely by underground wires were 69 at 45 cents per lamp per night, and 19 at 50 cents per lamp per night. The average for all public arc lights was 33.9 cents per lamp per night. New contracts have recently been awarded in New York City, at an average price for all public arc lamps, whether operated by underground or overhead wires, of 40.4 cents per lamp per night. The lamps to be operated by underground wires are, respectively, 228 at 40 cents per lamp per night, 69 at 45 cents per lamp per night, and 19 at 50 cents per lamp per night; a total of 316 lamps at an average price of 41.7 cents per lamp per night.

In order to obtain as late and accurate data as possible, I have mailed about 600 circulars, asking for information concerning the public arc lighting in cities and villages of the United States. To these letters nearly 500 replies have been received, from which two tables have been compiled, relating to arc lights of 2,000 nominal candle-power. Table 3, referring only to cities shown by the Eleventh Census to have a population of not less than 100,000, is given below. Table 4, embracing the data for all places from which answers were received, will be found in the appendix.

From San Francisco no reply was received, while Minneapolis and St. Paul do not appear in Table 3, as in these cities the lamps are not operated all of every night.

TABLE 3.—*Arc lamps of 2,000 nominal candle-power, burning all of every night. December, 1890.*

Cities.	Arc lamps (contract).	Contract price per lamp per year.	Period of illumination.	Length of contract.	Location of wires.
New York	883	*\$123.73	Sunset to sunrise every night.	Annual	Mostly overhead, a few underground.
Chicago.....	112	175.00	Dusk to daylight every night.		Overhead.

Providence	650	160.60	30 minutes after sundown to 30 minutes before sunrise.	5 years.....	Do.
Indianapolis.....	112	*62.25	All of every night.....	Annual....	Do.
Denver	221	*198.90	...do	5 years.....	Do.
Allegheny	16	180.00	Dusk to daylight every night.	Annual....	Do.
Average of 24 cities, not including Washington.	628.3	140.00			
Washington	206	219.00	Sunset to sunrise every night.	Annual....	All underground.

* Average.

From Table 3 it appears that, for the 24 cities named, the average contract price for arc lights of 2,000 nominal candle-power, burning all of every night, is \$140 per year, or 38.4 cents per lamp per night.

It will be observed that the corresponding prices now paid in Washington are about 56 per cent higher than the average as given above.

In Rochester, N. Y., some of the arc lamps are operated by water-power. Omitting that city, the average for the 23 others is \$141.64 per lamp per annum, or 38.8 cents per lamp per night.

From Table 3 it is also to be noticed that the number of public arc lamps in Washington is only about one-third of the average for the 24 cities named, a fact which may be considered as having a possible bearing upon the price which should be paid. It must be remembered, however, that in some of the cities named the public arc lighting is shared by two or more companies, there being now five different contracting companies in New York City.

The average price per lamp per year, burning all of every night, for all places (148 in number) from which reports were received, is \$121.79, or 33.4 cents per lamp per night. The corresponding prices for Washington exceed this average by nearly 80 per cent.

I have also computed the average price per lamp per year, burning all of every night, from a more extended list, including the places from which reports have been received, and, in addition, all the available data from "Whipple's National Electrical Directory, 1890," a work which appears to be very reliable. This resulting average is \$124.85 per lamp per year, or 34.2 cents per lamp per night. The price now paid in Washington exceeds this average by about 75 per cent.

As Table 3 deals only with data from cities having a population of more than 100,000 each, I believe the average price deduced from that table to be a fairly good indication of what should be paid for arc lamps of 2,000 nominal candle-power, operated by overhead wires, and burning

all of every night. The averages computed from the data contained in the general list of large and small cities and towns all over the country I believe to be of comparatively little value, owing to the great dissimilarity of the conditions controlling the cost.

Last year Maj. Charles W. Raymond, Corps of Engineers, then Engineer Commissioner, in reporting upon this subject, made a careful computation from actual and assumed data, of the probable cost of operating the arc lamps in Washington by means of underground wires, and arrived at the conclusion that "the existing price of 60 cents per arc lamp per night leaves little or no margin for surplus or profits."

The final paragraph of his report is as follows:

Throughout this investigation I have assumed that the Government is to pay a fair price for its electric-lighting service, like any private concern. It is to be remembered, however, that the Electric Lighting Company enjoys valuable privileges, occupying the public streets with its conduits, and monopolizing the profitable business of private electric lighting in the cities of Washington and Georgetown, and for these privileges it makes no payment whatever. I know of but one way to determine the value of such privileges, and that is by competition. If the District government were authorized to contract for the public lighting with one or more responsible companies, after due advertisement, the successful bidders to have the privileges of private lighting, I have no doubt the expenses of the municipal service could be greatly reduced.

Since Major Raymond's report was written the United States Electric Lighting Company has greatly extended its conduits, which now occupy a large portion of the most valuable part of the city for electric-lighting, public, residence, and commercial. No payment is made for this privilege.

Keeping in view the great value of these franchises and the fact that there is an entire absence of the competition necessary to suitably regulate the price of arc lighting in Washington, I believe that that price should not, in fairness to the municipality, exceed the highest price paid in New York City, last year as well as this year, for lamps operated through underground wires; that is, 50 cents per lamp per night, or \$182.50 per lamp per annum.

As a number of the large cities are now taking definite action toward placing a greater or less proportion of the electric-lighting wires underground, more extensive and positive information will soon be available upon the question of the fair price to be paid for arc lighting through underground wires. For the present I do not believe it wise to make a contract for as long as either 5 or 10 years, but if the price to be paid does not exceed 50 cents per lamp per night, I believe it safe to enter into contract for not longer than 3 years, under the supposition that there will be a gradual increase in the number of public arc lamps in service.

Very respectfully, your obedient servant,

JAS. L. LUSK,
Captain of Engineers, U. S. A.

Lieut. Col. H. M. ROBERT,
Corps of Engineers, U. S. A.,
Engineer Commissioner, D. C.

Approved:

HENRY M. ROBERT,
Lieut. Col., Corps of Engineers, U. S. A.,
Engineer Commissioner, D. C.

OFFICE OF THE COMMISSIONERS, DISTRICT OF COLUMBIA,
Washington, October 18, 1890.

In compliance with the provisions of the act of Congress making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1891, approved August 6, 1890, the Commissioners of the District of Columbia hereby invite proposals for supplying gas and electric lights at reduced rates for municipal lighting in the District of Columbia upon annual, 5-year, and 10-year contracts, and upon any system. The act provided as follows:

"That the Commissioners of the District of Columbia shall investigate, ascertain, and report to the second session of the Fifty-first Congress what deduction may be made for gas and electric lighting, both for annual, 5-year, and for 10-year contracts, and that they be authorized to invite proposals for supplying said light at reduced rates, and in this they are not limited to any one system."

Full information will be furnished upon application at this office. The application should state whether information is desired concerning gas lighting, electric lighting, or both. As these proposals will be submitted to Congress, it is desirable that they should be received at this office not later than November 20, 1890, but proposals will be received at any time before March 1, 1891.

J. W. DOUGLASS,
J. W. ROSS,
H. M. ROBERT,
Commissioners, District of Columbia.

OFFICE OF THE COMMISSIONERS, DISTRICT OF COLUMBIA,
Washington, D. C., October 12, 1890.

SIR: The act making appropriations for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1891, approved August 6, 1890, provides, "That the Commissioners of the District of Columbia shall investigate, ascertain, and report to the second session of the Fifty-first Congress what deduction may be made for gas and electric lighting, both for annual, 5-year, and 10-year contracts, and that they be authorized to invite proposals for supplying said light at reduced rates, and in this they are not limited to any one system."

The Commissioners request a full expression of your views as to whether the present price for gas lighting in the District of Columbia can be properly reduced either for annual, 5-year, or 10-year contracts.

Respectfully,

W. TINDALL,
Secretary.

Mr. G. A. McILHENNY,
President, Washington Gaslight Company, Washington, D.C.

OFFICE OF THE COMMISSIONERS, DISTRICT OF COLUMBIA,
Washington, D. C., October 12, 1890.

SIR: The act making appropriations for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1891, approved August 6, 1890, provides, "That the Commissioners of the District of Columbia shall investigate, ascertain, and report to the second session of the Fifty-first Congress what deduction may be made for gas and electric lighting, both for annual, 5-year, and 10-year contracts, and that they be authorized to invite proposals for supplying said light at reduced rates, and in this they are not limited to any one system."

The Commissioners request a full expression of your views as to whether the present price for gas lighting in the District of Columbia can be properly reduced either for annual, 5-year, or 10-year contracts.

Respectfully,

W. TINDALL,
Secretary.

Mr. JOHN LEETCH,
President, Georgetown Gaslight Company, Washington, D. C.

OFFICE OF THE COMMISSIONERS, DISTRICT OF COLUMBIA,
Washington, D. C., October 12, 1890.

SIR: The act making appropriations for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1891, approved August 6, 1890, provides, "That the Commissioners of the District of Columbia shall investigate, ascertain, and report to the second session of the Fifty-first Congress what deduction may be made for gas and electric lighting, both for annual, 5-year and 10-year contracts, and that they be authorized to invite proposals for supplying said light at reduced rates, and in this they are not limited to any one system."

The Commissioners request a full expression of your views as to whether the present price for electric lighting in the District of Columbia can be properly reduced, either for annual, 5-year or 10-year contracts, with the system now employed by you, or with any other equally satisfactory system.

Respectfully,

W. TINDALL,
Secretary.

Mr. SAMUEL NORMENT,
President, United States Electric Lighting Company, Washington D. C.

WASHINGTON GASLIGHT COMPANY,
Washington, D. C., October 25, 1890.

GENTLEMEN: In reply to your letter of October 12, requesting a "full expression of our views as to whether the present price for gas lighting in the District of Columbia can be properly reduced, either for annual, 5-year, or 10-year contracts," after a full consideration of the matter we have the honor to present the following as our conclusions:

First. As to annual contracts. It is impossible for us to do the lighting on a 1 year contract and furnish the present service, viz, 2,600 hours for each lamp, with 6-foot burner, for less than \$20 for each lamp per year.

Second. For a 5-year contract, 2,600 hours for each lamp, mounted with a 6-foot burner, we are willing to accept \$19.50; the same for 3,000 hours for each lamp, \$21.50.

Third. For a 10-year contract, each lamp burning 3,000 hours, 6-foot burner, \$21; provided we are at no time required to light less than 5,000 lamps.

Permit us to say in connection with this subject that we believe the best interests of the city would be subserved by adopting the 3,000-hour system, either for 1, 5, or 10 year contracts.

We are desirous that the street lighting of this city should be as nearly perfect as it is possible to make it. We shall spare no effort to that end, and shall be glad if our propositions meet the approval of your honorable Board.

I am, yours, very respectfully,

GEORGE A. MCILHENNY, President.

The COMMISSIONERS OF THE DISTRICT OF COLUMBIA.

WASHINGTON GASLIGHT COMPANY,
Washington, D. C., December 2, 1890.

GENTLEMEN: Referring to our letter of October 25, 1890, making proposals for lighting this city with gas, we beg to submit herewith the following additional proposition, viz:

For a 10-year contract, 2,600 hours per annum for each lamp, mounted with a 6-foot burner, \$19 per annum for each lamp.

Very respectfully,

WM. B. ORME,
Assistant Secretary.

The COMMISSIONERS OF THE DISTRICT OF COLUMBIA.

THE GEORGETOWN GASLIGHT COMPANY,
Washington, D. C., October 17, 1890.

DEAR SIR: I beg to acknowledge the receipt of your communication of the 12th instant, with reference to the act of Congress making appropriations for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1891, approved August 6, 1890, which provides that the Commissioners of the District of Columbia shall investigate, ascertain, and report to Congress what deductions may be made for gas and electric lighting, both for annual, 5-year, and 10-year contracts, and asking an expression of my views as to whether the present price paid for gas lighting in the District of Columbia, can be properly reduced, etc. In reply to this inquiry I would respectfully state that the price now paid for gas for street lighting in Georgetown, D. C., viz, \$20 per lamp per annum, each lamp to burn 2,600 hours, with a 6-foot burner, is as low as could be expected.

The test for strength and purity of gas is more rigid in the District of Columbia than is required in any other city of which I have knowledge. The price now paid for street lighting includes lighting, extinguishing, and repairing. This item of repairs, in some sections of Georgetown, owing to the wanton destruction of lamps and glass, is in many cases so heavy, as to almost absorb the entire amount received by the company for the lamps thus destroyed.

I do not think that the present plan of letting out the contracts for street lighting annually is a good one. If either of the gas companies had the contract for 5 or 10 years, they would feel justified in making larger expenditures of money in substituting the most approved kind of burners and in greater effort to perfect the system of street lighting.

I do not think under the present system this company would enter into a contract for a less sum than is now paid by the District government. It would be willing to make a contract for 5 years at \$19.50 or for 10 years at \$19 for 2,600 hours, or \$22 for 3,000 hours burning per lamp per annum.

Very respectfully,

JOHN LEETCH,
President.

W. TINDALL, Esq.

AMERICAN GAS CONTROLLER AND FIXTURE COMPANY,
Springfield, Mass., November 25, 1890.

GENTLEMEN: I beg to respectfully make the following proposition relative to lighting the streets of the city of Washington with the lamps of the United States Arc Gas Lamp Company, of Springfield, Mass.

We will furnish such number of lamps as may be required, placed on the posts in working order, each lamp guaranteed not to consume more than 12 feet of cubic gas per hour, for the sum of \$50 each, guarantying to keep such lamps in good working order for the period of one year, providing not less than 100 lamps are ordered. Or, we will furnish lamps and light such streets as the Commissioners may designate as follows:

For the first year, for the sum of \$72.50 per lamp; for the second and all succeeding years, not less than 3, for the sum of \$47.50 per lamp.

There are, we are informed, 206 electric-arc lights in use on the principal avenues of the city at the present time, which, at \$219 per lamp, amounts to the sum of \$45,114 per annum. Estimating that two of the United States arc gas lamps will replace one of the electric-arc lamps, we have 412 arc gas lamps, at \$50 each for the lamps and \$3.50 each for maintenance, or \$87.50 each for the 412 arc gas lamps—\$36,050 as

18 GAS AND ELECTRIC LIGHTING IN DISTRICT OF COLUMBIA.

against \$45,114 for the 206 arc electric lights, or a saving to the government of \$9,064 the first year; after which, they owning the lamps, the saving would be (allowing \$37.50 each for the maintenance of 412 arc gas lamps, \$15,450) \$29,664 per annum on these lamps alone.

As to ordinary street lamps, one of the United States arc lamps, we will say, is equal to two ordinary lamps, the cost of the maintenance of which is \$20 per annum, or \$40 for two. There are 5,400 street lamps, which, should our lamp be adopted, would be 2,700 arc gas lamps. Five thousand four hundred ordinary lamps at \$20 per annum, \$108,000; 2,700 arc gas lamps at \$37 per annum, \$101,250; making an amount saving of \$6,750.

Very respectfully,

F. W. SANBORN,
Agent.

The COMMISSIONERS OF THE DISTRICT OF COLUMBIA,
Washington, D. C.

AMERICAN GAS CONTROLLER AND FIXTURE COMPANY,
Springfield, Mass., January 27, 1891.

GENTLEMEN: Under the provisions of the present appropriation bill, increasing the number of hours during which the gaslights of the city shall be lit, I desire to amend the proposals of the above company for lighting the streets and avenues of the city of Washington with the United States arc gas lamps as follows:

We will furnish and erect not less than 100 arc gas lamps of not less than 67 candle-power each; light, extinguish, clean, and keep the same in good order and repair for a term not less than 3 years, the said contract for so doing to be assumed by the Washington Gaslight Company, for the sum of \$62.50 per lamp per annum.

Very respectfully,

F. W. SANBORN, *Agent.*

The COMMISSIONERS OF THE DISTRICT OF COLUMBIA.

UNITED STATES ELECTRIC LIGHTING COMPANY,
Washington, D. C., November 21, 1890.

GENTLEMEN: In reply to your communication of the 18th instant I would state that this company is considering the increased cost of maintenance and extension of the underground system and the local cost of production, supplying lights at figures as reasonable as any company in the country, and it is difficult to determine wherein greater economy of production and consequently reduced rates can be satisfactorily effected.

Nevertheless, supposing that the national capital is at least desirous of keeping pace is improved lighting service with other cities, and even towns, throughout the country, and that a reasonable extension of the service may be anticipated from year to year, I think that upon the basis of a 5-year contract a reduction of 10 per cent. and upon the basis of a 10-year contract a reduction of 15 per cent from the present rates might be effected.

Very respectfully,

A. A. THOMAS,
President.

The COMMISSIONERS OF THE DISTRICT OF COLUMBIA.

THE ELECTRIC HEAT AND POWER COMPANY OF THE UNITED STATES,
TENTH AND F STREETS NORTHWEST,
Washington, D. C., November 20, 1890.

GENTLEMEN: In compliance with the provisions of the act of Congress making appropriations to provide for the expense of the government of the District of Columbia for the fiscal year ending June 30, 1891, approved August 6, 1890, "that the Commissioners of the District of Columbia shall investigate, ascertain, and report to the second session of the Fifty-first Congress what reductions may be made for gas and electric lighting, both for annual, 5-year, and for 10-year contracts, and that they be authorized to invite proposals for supplying said light at reduced rates, and in this they are not limited to any one system," the Electric Heat and Power Company of the United States will enter into a 5 or 10 year contract with the District of

Columbia to furnish and place underground conduits to be used for either arc or incandescent electric lighting, distributed throughout the cities of Washington and Georgetown; the arc lights to be of 2,000 candle-power per lamp, at 45 cents per lamp per night; the incandescent lights to be of 25 candle-power, at \$15 per lamp per annum; the lights to burn 2,600 hours during the year, provided the privileges now enjoyed by the present electric light and gas companies in regard to private or commercial lighting be also extended to us, we agreeing to furnish electric lighting to private consumers at reasonable rates, all the material and work to be first class in every respect and of such character as has stood the test of time and experience. The cables to be Waring lead covered, thoroughly insulated, manufactured by the Standard Underground Cable Company of Pittsburgh, Pa., and to be of the same high character of underground cables now successfully used in Washington City, New York, Philadelphia, Chicago, St. Louis, and elsewhere in the United States, also in several countries in Europe and South America. The whole to be under the supervision and inspection at all times of the Commissioners of the District of Columbia.

Very respectfully,

THE ELECTRIC HEAT AND POWER COMPANY OF THE UNITED STATES,

By C. H. JACKSON,
President.

D. I. MURPHY,
Secretary, 941 F Street Northwest.

The COMMISSIONERS OF THE DISTRICT OF COLUMBIA,
Washington, D. C.

THE ELECTRIC HEAT AND POWER COMPANY OF THE UNITED STATES,

TENTH AND F STREETS NORTHWEST,
Washington, D. C., December 12, 1890.

GENTLEMEN: Referring to the proposition submitted by the Electric Heat and Power Company of the United States on the 20th ultimo, I have the honor to inform you that the company now desires to amend said proposition by agreeing to maintain the arc lights, therein mentioned, from sunset to sunrise instead of "2,600 hours during the year."

Very respectfully,

D. I. MURPHY,
Secretary.

THE ELECTRIC HEAT AND POWER COMPANY OF THE UNITED STATES.

The COMMISSIONERS OF THE DISTRICT OF COLUMBIA,
Washington, D. C.

○

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 3, 1891.—Ordered to lie on the table and be printed.

Mr. GIBSON presented the following

**MEMORIAL OF MEMBERS OF THE PRESBYTERIAN CLERGY OF
NEW ORLEANS PRAYING AN AMENDMENT TO THE CONSTITU-
TION TO PROHIBIT LOTTERIES.**

*To the honorable the Senate and House of Representatives of the Congress
of the United States :*

We respectfully ask you to propose for adoption an amendment to the Constitution of the United States. We desire that such amendment shall prohibit the drawing of lotteries, the chartering of lottery companies, and the sale of lottery tickets within the borders of the United States.

We urge it for the reason that by observation on the spot, where for 22 years the Louisiana State Lottery has flourished, its evil has been conspicuous throughout that time, and its power for evil has increased with its years.

It is unblushing in its temptations, its tickets being in open market upon every street.

This public solicitation at every corner and open traffic in tickets as quasi-legitimate merchandise has blunted the moral sense of the community to such an extent, that the city public press has dared to stigmatize opposition thereto as fanaticism.

It has drawn the weak into theft where sacred funds have been intrusted to their keeping ; it has scattered the savings of a lifetime, overcoming by its seductions the frugality which has laid them up for a " rainy day ; " and has unamericanized those whom it has intoxicated with its delusive hopes, who look to chance for fortune, whereas a country's pride and reliance must be its citizens who by thrift, pluck, power, perseverance, and independence build up their own fortunes, and with these the fortunes of each State.

It is destroying the moral fiber and habits which make good citizens, and breeding a class whose shiftless, thriftless methods will create a pauperhood in this land, a fit hotbed for socialism, communism, and anarchism, as have sprung up in Europe, amid a pauper populace, beggared by governmental errors.

Its victims have committed every crime in the calendar from petty larceny, in order to buy a 25-cent ticket, to suicide to end a hopeless existence, after the dreadful infatuation had induced the hapless self-murderer to squander what had been needed to buy bread for a helpless family. And the prize-winner has been no less a victim, as his quickly gotten wealth has been wasted in riotous living, and he has been confirmed in the habits of a spendthrift and debauchee,

It creates a spirit of ungodliness, where the blessings of Providence are not looked to as waiting upon the practice of industry and virtue, but where the getting of wealth, being the chief end, all means, though unscrupulous or criminal, are deemed condonable for this result. It has controlled legislatures in the past; and through the Progressive League it offers now to interfere in local politics throughout the State; by testimony recently adduced, it is shown to have tampered with the official records of the State senate, and it is unjustly sapping the esteem and confidence which a people should forever feel in the judiciary, by impudently claiming that there are upon the bench those who are lottery judges.

It has shown that there is nothing so sacred that it will not attempt to bend to its own uses, and as its power has been its wealth, it has created in the popular mind a belief in the corruptibility of public officers by bribery, which threatens, if the Louisiana Lottery Company be rechartered, to destroy the efficiency of government in this State.

And every evil in this State will be reproduced in every State of this Union if the lottery charter be regranted. How far it has spread already can be known only to those who have discovered the lottery gamblers in the other States. The company claims that it gets but 3 per cent. of its earnings from Louisiana and 97 per cent. from beyond its borders.

If 3 per cent. of the injury worked by the lottery company has nearly destroyed this State, who can calculate the aggregate harm throughout this Union. It has injured the Federal body from this center; the Federal hand should reach here and every other where to cut off the evil. A lottery in any State is a source for evil throughout every State, and every State legislature should adopt the amendment which your body should propose, to protect its own people and its neighbors from this leper of fraud, infamy, and contamination.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 4, 1891.—Presented, referred to the Committee on Post-Offices and Post-Roads, and ordered to be printed.

MR. STEWART SUBMITTED THE FOLLOWING MEMORIAL OF THE NATIONAL FARMERS' ALLIANCE AND INDUSTRIAL UNION OF AMERICA PRAYING FOR AN AMENDMENT TO THE CONSTITUTION OF THE UNITED STATES FORBIDDING THE STATES AND TERRITORIES ESTABLISHING OR MAINTAINING ANY LOTTERY.

To the honorable the President and members of the Senate of the United States and the honorable the Speaker and members of the House of Representatives of the United States, composing the Congress of the United States :

The memorial of the undersigned, president of the National Farmers' Alliance and Industrial Union of America, with respect, shows—

That on the first Tuesday of December, 1890, there assembled at Ocala, Fla., a convention composed of the delegates of the National Farmers' Alliance and Industrial Union of America. The convention thus assembled consisted of delegates, duly accredited, from 28 States and Territories, to wit: Arkansas, Alabama, California, Florida, Georgia, Illinois, Indiana, Kentucky, Louisiana, Maryland, Missouri, Michigan, Mississippi, New York, Nebraska, North Carolina, North Dakota, Kansas, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Virginia, West Virginia, Indian Territory, and Oklahoma.

The convention so assembled adopted the following resolution:

Whereas lotteries are most pernicious in their effects and are destructive of the morals of the people as well as of their material interests, and are condemned by the virtually unanimous sentiment of the people of the United States, expressed by the highest courts of the land and by the laws of forty-two States of this Union;

Whereas the Louisiana State Lottery Company has grown into gigantic proportions; has become a national evil; is collecting an annual tribute of nearly \$28,000,000 from the people of the United States; is operating its nefarious business upon a scheme which, even from the standpoint of gamblers, is grossly unfair; has spread its agencies over the whole country, and has endeavored to lay the temptation of gambling in the way of every man, woman, and child in the land; and, unsatisfied by the accumulation of the enormous wealth of which during the last quarter of a century it has spoliated the people of the United States, is now striving, by the use of all its tremendous power and uncounted gold, to obtain from the people of Louisiana an extension of life for 25 years from January 1, 1894;

Whereas the recent attempts of the Louisiana State Lottery Company to possess itself of the government of the State of Dakota, and its unparalleled audacity exhibited to the whole country during the recent session of the legislature of the State of Louisiana, show beyond all question its power to make dangerous attacks upon any State of the Union;

Whereas it is the duty of the Congress of the United States to protect each and every State of the Union against the great evils arising from the Louisiana State Lottery Company and all other lotteries, and especially against the tremendous dangers of an onslaught by the Louisiana State Lottery Company upon their governments for the purpose of obtaining so-called lottery charters, thereby fostering the corruption of public men and exciting political commotion of the gravest character;

Whereas Congress has partially performed its duty to the nation by the enactment of the recent anti-lottery law, but the same will prove ineffectual because of the immense power and wealth of the Louisiana State Lottery Company, and especially because of its determination to violate the law and the subterfuges it is contriving to evade the same;

Whereas, the only means by which the Louisiana State Lottery Company and all other lotteries can be effectually destroyed for all time, and the people of the United States relieved permanently from one of the greatest evils of the times, and the States made absolutely secure from attacks upon their governments by such corrupt corporations, and the national sentiment against all lotteries be materialized and enforced, is the adoption of an amendment to the Constitution of the United States forbidding the States from establishing or maintaining any lottery, or from granting any lottery charter;

Whereas the Farmer's State Union of Louisiana has arrayed itself against the Louisiana State Lottery Company and has done noble work in the great struggle being carried on in that State against the great gambling association; and

Whereas we sympathize cordially with our brothers of Louisiana, and we know that they fully deserve our thanks for their efforts in behalf of their State and of the whole Union, and that they are entitled to the fullest assistance on the part of our order: Therefore be it

Resolved, That it is the sense of this body that an amendment to the Constitution of the United States should be submitted by the Congress of the United States forbidding any State from granting a lottery charter, or franchise of any kind, to carry on lottery schemes, and annulling all such charters and franchises if already granted. That the president of this body be requested at an early day to memorialize Congress in the name of this body, praying for the passage of such an amendment.

Resolved further, That a committee of three be appointed by the Chair whose duty it shall be, under the supervision of the executive committee, to correspond with all the alliances and unions throughout the United States, and with all other bodies in sympathy with the movement, requesting the presentation at once to Congress of similar memorials.

. In submitting to your honorable body the resolution thus adopted, and in discharge of the duty imposed on your memorialist, speaking for said convention, the following considerations, in addition to those stated in the resolution, are presented:

(1) That if there is a single principle in social morality and in political economy upon which there is no division of opinion among the States composing this Union, it is as regards that principle which condemns public gambling as vicious, immoral, and prejudicial to the entire interests of a community.

(2) That of all the forms and modes of gambling lottery gambling is the most insidious and pernicious in its corrupting influence, the most widespread in its operations, the most ruinous in its effects, and the most difficult to detect and repress.

(3) That the unanimity of opinion in all the States of the Union in condemning lottery gambling is demonstrated by the fact that forty-two States have in their constitutions or statutes expressly prohibited lotteries and placed in the category of criminal acts the buying or selling of lottery tickets.

(4) That the practical impossibility of suppressing lottery gambling in other States as long as it is tolerated in one State is shown by the fact that the Louisiana State Lottery Company has existed in the State of Louisiana for more than 20 years, and openly boasts that it derives more than 97 per cent of its vast revenues from the sale of its tickets in States where the sale of lottery tickets is forbidden by law. On computations often published, and the correctness of which have never been denied, its gross annual revenues have been stated to exceed \$28,000,000. As the company has existed for over 20 years this sum would represent an aggregate amount of more than \$500,000,000 collected during the period of its existence by this single lottery from the American people in defiance and through violation of law. This enormous income of this one concern alone, raised from the whole body of

the American people in open and avowed disregard of law, is all the more remarkable as the scheme of this particular lottery gives its players so few chances of winning that it has been denounced as fraudulent even as a lottery.

A distinguished and perfectly impartial mathematician, the late Prof. Richard A. Proctor, has examined the problem of winning in the Louisiana State Lottery Company, and as the result of his examination has made the following statement:

But the greed for chance-won wealth is so great among men of weak minds, and they are so large a majority of all communities, that the bait may be dangled for them without care to conceal the hook. In all lotteries and gambling systems which have yet been known the hook has been patent, and the evil it must do if swallowed should have been obvious, yet it has been swallowed greedily.

A most remarkable illustration of the folly of those who trust in luck, and the cool audacity of those who trust in such folly with more reason but with more rascality, is presented by the Louisiana Lottery in America. This is the only lottery of the kind now permitted in America. Indeed, it is nominally restricted to the State of Louisiana, but practically the whole country takes part in it, tickets being obtainable by residents in every State of the Union.

The peculiarity of the lottery is *the calm admission, in all advertisements, that it is a gross and unmitigated swindle*. The advertisements announce that each month 100,000 tickets will be sold, each at \$5, shares of one-fifth being purchasable at \$1. Two commissioners—Generals Early and Beauregard—control the drawings; so that we are told, and may well believe, the drawings are conducted with fairness and honesty, and in good faith to all parties. So far, all is well. We see that each month, if all the tickets are sold, the sum of \$500,000 will be paid in. From this monthly payment we must deduct \$1,000 paid to each of the commissioners, and perhaps some \$3,000 at the outside for advertising. We may add another sum of \$5,000 for incidental expenses, machinery, sums paid to agents as commission on the sale of tickets, etc. This leaves \$490,000 monthly if all the tickets are sold. And as the lottery is “incorporated by the State legislature of Louisiana for charitable and educational purposes” we may suppose that a certain portion of the sum paid in monthly will be set aside to represent the proceeds of the concern and justify the use of so degrading a method of obtaining money.

Probably it might be supposed that 24 per cent per annum, or 2 per cent per month would be a fair return in this way, the system being entirely free from risk. This would amount to \$9,800, or say \$10,000, monthly. Those who manage the lottery are not content, however, with any such sum as this, which would leave \$480,000 to be distributed in prizes. They distribute \$215,000 less, the total amount given in prizes amounting to only \$265,000. If the 100,000 tickets are all sold—and it is said that few are ever left—the monthly profit on the transaction is not less than \$225,000, or 45 per cent on the total amount received per month. This would correspond to 540 per cent per annum if it were paid on a capital of \$500,000. But in reality it amounts to much more, as the lottery company runs no risk whatsoever. The Louisiana Lottery is a gross swindle, besides being disreputable in the sense in which all lotteries are so. What would be thought if a man held an open lottery, to which each of 100 persons admitted paid £5 and taking the sum of £500 thus collected, were to say: “The lottery, gentlemen gamblers, will now proceed; £265 of the sum before me I will distribute in prizes as follows: (indicating the number of prizes and their several amounts), “the rest, this sum of £235, which I have here separated, I will put into my own pocket” (suiting the action to the word) “for my trouble in getting up this lottery?” The Louisiana Lottery is a transaction of the same rascally type—not rendered more respectable by being on a very much larger scale.

If a scheme like the one thus described has succeeded during 20 years of existence, in taking from the people of all the States of the Union a vast sum of money annually, that fact alone irresistibly calls for such action as will render the spoliation no longer possible in the future.

The recent postal legislation forbidding the use of the United States mails to lotteries, whilst accomplishing a beneficent purpose, will not, alone, prevent the continuance of the wrong. Nothing could more completely prove this than the fact that, despite this legislation, the Louisiana Lottery Company is now pressing in the State of Louisiana the adoption of an amendment to its constitution authorizing the con-

tinuance of a lottery charter for the period of 25 years, and that in order to secure this charter it offers the sum of \$1,250,000 per annum to the people of that State during the 25 years. This corporation, or its main promoters, therefore, despite the postal legislation, considers that the field of its operation will be so wide that it is willing to pay for the privilege of carrying on its illegal business the large sum above named.

The reasons which it urges for the adoption of this amendment or recharter for another quarter of a century, serve to demonstrate the absolute necessity for Federal interference to protect the other States of the Union from its illicit business. One of these reasons, recently published in a paper emanating from an organization having for its purpose the pressing of the adoption of the amendment, has the hardihood to urge that as a sum of money is paid every year by the people of Louisiana to the general Government, under the internal revenue system and by way of taxes on imports, the recharter of the lottery will enable the people of Louisiana to get back from the people of the other States in part the sum of the taxes paid by the people of Louisiana to the Federal Government. Or, in plain English, the people of Louisiana are invited to sanction this great wrong in order that they may obtain from the lottery company a part of the money which that company will illegally filch from the citizens of the other States, and that thus the people of the State of Louisiana will practically avoid the consequences of Federal taxation.

The cool and cynical effrontery of this unique proposition to offset taxes by a participation in the profits of lottery gambling is so incredible, that we beg to give the very words of the proposition. They are quoted from a document issued by an organization known as the "Progressive League," which is flooding the State of Louisiana with its papers in favor of the lottery amendment :

The National Government imposes an internal-revenue tax upon the people of Louisiana which amounts to many thousands of dollars annually. In addition to this, the people of the city pay in the way of import duty hundreds of thousands of dollars which go into the National Treasury. More than one-fourth of these annual taxes are devoted to the payment of pensions to soldiers who fought in the Northern army. They believed that their cause was just, and those who lost in the struggle the physical means of making a livelihood, and also the widows and orphans of those who lost their lives, are supported largely by the taxes which the people of Louisiana pay each year. The revenue arising from the lottery business in Louisiana does not come from Louisiana; barely 3 per cent. of it is paid by the people of this State, 97 per cent. of it comes from other States and Territories.

This flagrantly vicious argument emphatically demonstrates the justness of the request which this memorial makes. The evil is a vast one. It is a national one. It has existed for 20 years. During that time it has taken from the honest people of the United States an enormous amount of money. Its continuance is threatened, not for a brief period, but for a period of a quarter of a century. The submission of the amendment will not only eradicate it in its present form, but will render its recurrence impossible, and will thus, at once, put an end to what, it is submitted, has become one of the most crying of national evils.

Respectfully submitted.

L. L. POLK,
*President National Farmer's Alliance and Industrial Union,
and Chairman Memorial Committee.*

{ NO. 60.

REPORT

OF THE

NATIONAL ACADEMY OF SCIENCES

FOR

THE YEAR 1890.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1891.

LETTER OF TRANSMITTAL.

NATIONAL ACADEMY OF SCIENCES,

Washington, D. C., January 10, 1891.

SIR: In conformity with the requirements of the act of incorporation, approved March 3, 1863, I have the honor to submit herewith a report of the operations of the National Academy of Sciences during the past year.

Very respectfully,

O. C. MARSH,

President of the National Academy of Sciences.

The PRESIDENT OF THE SENATE.

REPORT OF THE NATIONAL ACADEMY OF SCIENCES.

The National Academy of Sciences was established by act of Congress in March, 1863, with power to frame its own constitution, select its own members, and provide in other respects for its continuance and successful operation.

The object of the Academy is to advance science, and especially to investigate, examine, experiment, and report on any subject of science or art whenever called upon by any department of the Government.

The Academy contains at present about 100 members, and these have all been selected for their original researches in science. They represent within their ranks nearly every department of knowledge, and their services, in accordance with the charter of the Academy, are always at the disposal of the Government, without compensation.

SESSIONS OF THE NATIONAL ACADEMY.

During the past year, the Academy has held three sessions. The first was the regular annual meeting, held in Washington, D. C., April 15 to 18, 1890; the second was a scientific session in Boston, Mass., November 11 to 13, 1890; and the third was a special session in Boston, November 12, 1890.

STATED SESSION.

HELD IN WASHINGTON CITY, APRIL 15 TO 18, 1890.

The Washington session was held in the National Museum, the president, Prof. O. C. Marsh, presiding.

The following members were present during the session:

Abbot.	Dutton.	Hyatt.	Newton, H. A.
Barker.	Gibbs, J. W.	Langley.	Pumpelly.
Bell.	Gill.	Lesley.	Putnam.
Billings.	Goode.	Marsh.	Remsen.
Boss.	Gould.	Meigs.	Rowland.
Brewer.	Hague.	Mendenhall.	Schott.
Brooks.	Hall, A.	Michelson.	Scudder.
Brush.	Hall, J.	Mitchell, S. W.	Walker.
Chandler, S. C.	Hastings.	Morse.	Watson.
Cope.	Hill, G. W.	Newcomb.	Young.

During this session, papers were read and discussed in the following order:

1. MICHELSON, A. A.: On the application of interference methods to astronomical measurements. Discussed by Messrs. Hall and Michelson.
2. TODD, D. P.; presented by the home secretary: Totality of the eclipse of 1889, December 22. Read by the home secretary.
3. SCUDDER, S. H.: Physiognomy of the American Tertiary Hemiptera. Discussed by Messrs. Cope and Morse.
4. ROWLAND, H. A.: On the spectrum of metals. Discussed by Messrs. W. Gibbs, Young, Rowland, and Michelson.
5. CHANDLER, S. C.: A system of classification of variable stars. Discussed by A. Hall, Gould, Michelson, and Chandler.
6. WOOD, H. C.: The effects of the inhalation of nitrogen, nitrous oxide, oxygen, and carbonic acid upon the circulation; with special reference to the nitrous oxides, anæsthesia, and asphyxia. Read by Mr. Billings. Discussed by Messrs. Cope and Billings.
7. BROOKS, W. C.: The budding of salpa considered in relation to the question of the inheritance of acquired characters. Discussed by Messrs. Cope and Brooks.
8. GOODE, G. BROWN, and TARLETON H. BEAN: Recent advances towards a knowledge of the fishes of the great oceanic depths. Discussed by Mr. Gill.
9. GILL, THEO.: The inter-relationships of the Ichthyopsida. Discussed by Mr. Cope.
10. LANGLEY, S. P.: On the cheapest light. Discussed by Messrs. Young, Newcomb, Langley, and Scudder.
11. PUMPELLY, R.: On the relation of secular disintegration to certain crystalline and transitional schists.
12. PUMPELLY, R.: On the structure of the Green Mountains.
13. GILL, THEO.: The Notacanthoid fishes as representatives of a peculiar order.
14. GILL, THEO.: The Halosauroid fishes typical of a special order.
15. REMSEN, IRA: Researches on the double halides.
16. REMSEN, IRA: Researches on the sulphinides.

REPORTS OF COMMITTEES.

Mr. Gould presented a report from the committee of the council on the classification of the Academy into sections. This report was referred to the council.

The chairman of the committee on ways and means to provide a fund for the Academy being absent, the president reported progress.

For the committee on publication, the home secretary stated that Part 2 of Volume IV of the memoirs had been finished, after long delays, and was now being distributed by the Smithsonian Institution; also that the report of the president for 1889, with four memoirs, was in the hands of the Senate committee. The president appointed Mr. Mendenhall to fill the vacancy existing on this committee.

Mr. Gill reported progress on the bibliography of the publications of the Academy.

On behalf of the committee on the relation of the Academy to the Government, the president stated briefly that the relations to the Government had been very cordial. Mr. Brush was appointed to fill the vacancy on this committee.

Mr. Morse expressed the opinion that members of the Academy should receive Government publications on subjects in which they were especially interested, and the president referred the matter to the committee on the relation of the Academy to the Government.

Mr. Morse presented the following resolution, which was adopted :

Resolved, That the committee on the relation of the Academy to the Government be requested to ascertain what steps are necessary to secure a distribution of Government publications to members of the National Academy, and report the same to the Academy at its next meeting.

For the board of trustees of the Watson fund, Mr. Newcomb said that there had been no formal proceedings since last year's meeting. Mr. A. Hall was appointed to fill the vacancy on this committee, caused by the death of Mr. Coffin.

ELECTIONS.

The following members were elected for the council for the ensuing year : Messrs. Brush, Gould, Meigs, Newcomb, Remsen, and Walker.

RECOMMENDATIONS FROM THE COUNCIL.

The following recommendations from the council were adopted by the Academy :

1. That Mr. C. W. Shoemaker be appointed recording secretary for the present meeting.
2. That the membership fee for the ensuing year be \$5.
3. That the consideration of the amendment to the constitution dividing the membership into sections be postponed until the next stated session, and that the home secretary be authorized to print copies of the report on the subject for the information of the members.

BIOGRAPHICAL MEMOIRS.

At a public session of the Academy, held on the evening of April 16, the following biographical memoirs were read :

Of Dr. James C. Dalton, by Dr. S. Weir Mitchell.

Of Professor Elias Loomis, by Prof. H. A. Newton.

Of Prof. Leo Lesquereux, by Prof. J. P. Lesley.

PRESENTATION OF THE HENRY DRAPER MEDAL.

At the same public session, April 16, the third Henry Draper gold medal was presented to Prof. H. A. Rowland, for his researches on the solar spectrum, as well as for his investigations in astronomical physics.

REPORT OF THE AUDITING COMMITTEE.

The following report of the auditing committee was presented to the Academy, and, on motion of Mr. Reusen, was adopted:

Washington, D. C., April 16, 1890.

To the President of the National Academy of Sciences:

SIR: The committee appointed to audit the treasurer's accounts, and to compare them with the report made by the committee on the securities held by the Academy, respectfully report that they have examined the books and the accounts of the treasurer, and have compared the vouchers with the disbursements reported, and have compared the receipts with the record of dues received from members, and with the record of interest received from invested funds of the Academy, and that they have also compared the accounts of sales of bonds and reinvestments in loans, and find the same to be correct.

T. C. MENDENHALL.

SAM. H. SCUDDER.

ARNOLD HAGUE.

TREASURER'S REPORT.

April 15, 1890.

To the President of the National Academy of Sciences:

SIR: I have the honor to transmit herewith my financial report as treasurer of the National Academy of Sciences for the year ending April 15, 1890.

1. *General account, April 16 1889, to April 15, 1890.*

RECEIPTS.

Balance brought forward from April 16, 1889.....	\$410.77
Amount of invested income	*500.00
Income received during the year	460.26
Total to be accounted for.....	1,371.03

DISBURSEMENTS.

Disbursed during the year.....	417.67
Balance on hand	453.36
Invested income on hand	*500.00
Actual balance after deducting outstanding obligations.....	953.36

2. *The Bache trust fund.*

RECEIPTS.

Balance brought forward from April 16, 1889.....	\$3,500.95
Income received during the year	1,632.45
Total to be accounted for.....	5,133.40

* Invested in District of Columbia 3.65 bonds.

DISBURSEMENTS.

Disbursed during the year.....	\$599.71
Balance on hand.....	4,533.69
Actual balance after deducting outstanding obligations.....	1,639.45

3. *The Watson trust fund.*

RECEIPTS.

Balance brought forward from April 16, 1889	\$298.39
Amount of invested income	*1,500.00
Income received during the year	747.57
Total to be accounted for.....	2,545.96

DISBURSEMENTS.

Disbursed during the year	100.00
Balance on hand	945.96
Invested income on hand.....	*1,500.00
Actual balance after deducting outstanding obligations	2,445.96

4. *The Henry Draper medal fund.*

RECEIPTS.

Balance brought forward from April 16, 1889.....	\$740.31
Income received during the year.....	167.52
Total to be accounted for	907.83

DISBURSEMENTS.

Disbursed during the year	†463.88
Balance on hand	443.95

5. *The J. Lawrence Smith medal fund.*

RECEIPTS.

Balance brought forward from April 16, 1889.....	\$1,237.78
Income received during the year	239.22
Total to be accounted for.....	1,477.00

DISBURSEMENTS.

Disbursed during the year	†540.00
Balance on hand.....	937.00

Very respectfully,

J. S. BILLINGS,
Treasurer National Academy of Sciences.

* Invested in District Columbia 3.65 bonds.

† Reserve fund; Draper, \$260; Smith, \$540.

10 REPORT OF THE NATIONAL ACADEMY OF SCIENCES, 1890.

REPORT OF THE COMMITTEE ON SECURITIES HELD BY THE ACADEMY.

The committee, Messrs. Schott and Goode, appointed to verify the securities held by the Academy, presented the following report, which was approved :

1. *General fund.*

District of Columbia 3.65 bonds.....	\$500.00
--------------------------------------	----------

2. *Bache trust fund.*

United States 4 per cent. bonds, registered.....	\$3,850.00
Philadelphia 6 per cent. bonds, registered.....	600.00
United States 4½ per cent bonds, registered	42,100.00
Davenport 6 per cent. bonds, coupon.....	1,000.00
	47,550.00

Deed for 160 acres of Missouri lands to A. D. Bache, not yet transferred to the name of the Academy.

3. *Joseph Henry fund.*

An agreement with the Pennsylvania Company for insurance on lives and granting annuities, as to the final disposition of the Joseph Henry fund of \$40,000. The above will not be available until the decease of all of Professor Henry's children.

4. *Watson trust fund.*

Certificate for one hundred and thirty-four shares of the capital stock of the Michigan Life Insurance Company.....	\$6,700.00
District of Columbia 3.65 bonds	1,500.00
United States 4½ per cent. bonds, registered.....	6,200.00
United States 4 per cent. bonds, registered	850.00
	15,250.00

5. *Henry Draper medal fund.*

United States 4 per cent. bonds, registered.....	5,000.00
Deed of trust of Mary Anna Palmer Draper to the National Academy of Sciences.	

6. *J. Lawrence Smith medal fund.*

United States 4½ per cent. bonds, registered.....	7,200.00
Deed of trust of Sarah Julia Smith to the National Academy of Sciences.	

Amount of available securities.....	75,500.00
-------------------------------------	-----------

NEW MEMBERS.

The following new members were elected: Messrs. George L. Goodale, Russell H. Chittenden, Thomas L. Casey, and Richmond M. Smith.

NOMINATIONS.

Twelve nominations for membership in the Academy were read, These will be acted upon at the next stated session,

INVITATIONS.

The members of the Academy received an invitation to accept the privileges of the Cosmos Club during their stay in Washington.

The U. S. Commissioner of Fish and Fisheries also extended an invitation to members of the Academy and their friends, to visit the marine and fresh-water aquaria in the Commission building, near the National Museum.

Mr. Langley invited the members of the Academy, with their families and friends, to inspect the new physical apparatus in the small building near the Smithsonian Institution.

Mr. J. P. Lesley, of Philadelphia, exhibited a geological model of the condition of the upper surface of the Medina sandstone in the State of Pennsylvania.

DEATH OF MEMBER.

The president announced the death, since the last meeting, of Prof. J. H. C. Coffin, one of the original members of the Academy. Professor Coffin died January 8, 1890. Mr. Gould was appointed to prepare the biographical memoir.

The Academy adjourned April 18, 1890, to meet in Boston, Mass., in scientific session, November 11, 1890.

SCIENTIFIC SESSION.

HELD IN BOSTON, MASS., NOVEMBER 11 TO 13, 1890.

A scientific session, for the reading of papers only, having been called by the council, as announced at the April meeting, the Academy met in the lecture room of the Boston Society of Natural History, Boston, Mass., on November 11, 1890. The meetings were continued on the 12th and 13th.

The president, Prof. O. C. Marsh, presided, and the following members were present during the session :

Abbot.	Farlow.	Johnson.	Powell.
Barker.	Gibbs, W.	Langley.	Pumpelly.
Boss.	Gilbert.	Lovering.	Putnam.
Bowditch.	Gill.	Marsh.	Rogers, W. A.
Brewer.	Gould.	Mendenhall.	Scudder.
Brush.	Hague.	Michelson.	Trowbridge, J.
Casey.	Hall, A.	Mitchell, H.	Walker.
Chandler, C. F.	Hall, J.	Morse.	Watson.
Chandler, S. C.	Hill, H. B.	Newberry.	White.
Chittenden.	Hyatt.	Newton, H. A.	
Crafts.	Jackson.	Pickering.	

The following papers were read and discussed :

1. CHITTENDEN, R. H. : On the Primary Cleavage products formed in the digestion of the Albuminoid Gelatin. Discussed by Mr. W. Gibbs.
2. PICKERING, E. C. : On the Classification and Distribution of the Stellar Spectra.
3. CATLIN, R. ; presented by S. Weir Mitchell : On the Relation of Atmospheric Electricity, Magnetic Storms, and Weather Elements, to a case of Traumatic Neuralgia. Read by title.
4. BOWDITCH, H. P. : On the Growth of Children studied by Galton's method of Percentile Grades.
5. TROWBRIDGE, J. : On Electrical Oscillations in Air, together with Spectroscopic Study of the motions of Molecules in Electrical Discharges. Discussed by Mr. Michelson.
6. CROSS, C. R. ; presented by F. A. Walker : Some considerations regarding Helmholtz's Theory of Dissonance.
7. ROGERS, W. A. : A critical Study of a Combined Meter and Yard upon a surface of gold, the Meter having subdivisions to two millimetres, and the Yard to tenths of inches.
8. ROGERS, W. A. : On Evaporation as a disturbing Element in the determination of Temperatures. Mr. Rogers's papers were discussed by Messrs. Crafts, Gould, and Pickering.
9. FEWKES, J. W. ; presented by A. Hyatt : On the use of the Phonograph in the Study of the Languages of the American Indians. Discussed by Mr. Powell.
10. WALKER, F. A. : On the Probable Loss in the Enumeration of the Colored People of the United States, at the Census of 1870. Discussed by Messrs. Scudder and Newton.
11. NEWTON, H. A. : On the Capture of Periodic Comets by Jupiter. Discussed by Messrs. Boss and Chandler.
12. OSBORNE, T. B. ; presented by S. W. Johnson : On the Proteids of the Oat Kernel. Discussed by Messrs. Gibbs and Johnson.
13. CHANDLER, S. C. : On the present aspect of the problems concerning Lexell's comet. Discussed by Messrs. Boss, Gould, and Newton.
14. NEWBERRY, J. S. : The Great Falls Coal Field, Montana ; its geological age and relations. Discussed by Mr. White.
15. GIBBS, W. : Notes on the separation of the oxides in cerite, samarskite, and gadolinite. Discussed by Messrs. Barker and Chandler.
16. GILL, T. : On the relationships of the Cyclopteroidea.
17. DOLBEAR, A. E. ; presented by J. Trowbridge : On the origin of electric-magnetic waves

SPECIAL SESSION.

HELD IN BOSTON, MASS., NOVEMBER 12, 1890.

A special session of the Academy having been called by the council, in accordance with Article III, section 1, of the constitution, the Academy convened at the Boston Society of Natural History, November 12, 1890, the president, Prof. O. C. Marsh, presiding.

The president submitted his annual report to Congress, as far as completed, and the following recommendation from the council was adopted by the Academy :

Resolved, That the president be authorized to include in his report the proceedings of the present meeting ; and, also, any reports to the Government submitted to the Academy during the year.

INVESTIGATION OF THE NORTH MAGNETIC POLE.

The president read a letter from the Secretary of the Treasury, dated May 22, 1890, requesting the appointment of a committee composed of members of the National Academy of Sciences, or others familiar with the problems involved, to formulate a plan for a systematic investigation of the north magnetic pole. In accordance with this request, the president stated that he had appointed the following committee:

Prof. S. P. Langley, Secretary, Smithsonian Institution, *Chairman*.

Gen. Henry L. Abbot, U. S. Army.

Prof. William P. Trowbridge, Columbia College.

Prof. Alfred M. Mayer, Stevens Institute.

Prof. Charles A. Schott, U. S. Coast and Geodetic Survey.

Prof. John Trowbridge, Harvard University.

Prof. Charles Carpmael, University of Toronto.

UNIFORMITY OF MEASURES IN PHYSICAL APPARATUS.

The following resolution, proposed by Mr. Langley and recommended by the council, was adopted by the Academy:

Resolved, That the president appoint a committee of three members to secure such uniformity of measures in physical apparatus as will promote interchangeability of their parts.

The president appointed the following members as this committee:

S. P. Langley, *Chairman*, T. C. Mendenhall, E. C. Pickering.

The president and home secretary explained the condition of the printing of the memoirs of the Academy. Mr. Gould moved that the committee on printing be directed to omit those memoirs that were not found to be in a form suitable for immediate printing. This was seconded by Mr. Morse and adopted by the Academy.

ABSTRACT OF TREASURER'S REPORT.

The home secretary read an abstract of a report of the treasurer, dated November 10, 1890. This report showed the following available balances:

General fund.....	\$622. 14
Bache fund.....	840. 25
Watson fund.....	2,920. 13
Draper fund.....	584. 69
Smith fund.....	1,181. 29
Total	6,148. 50

THE WATSON MEDAL.

Mr. Gould presented the following report from the board of trustees of the Watson fund, which was approved by the Academy:

Boston, November 12, 1890.

To the National Academy of Sciences:

The board of trustees of the Watson fund respectfully recommend to the Academy that a Watson medal be awarded to Dr. Arthur Auwers,

of Berlin, for his contributions to stellar astronomy, including his superintendency of the zone observations of the Astronomische Gesellschaft, his researches on variable proper motions, and his re-discussion of Bradley's observations.

The grounds for this award will be presented to the Academy in due time.

Very respectfully,

SIMON NEWCOMB.

B. A. GOULD.

ASAPH HALL.

The special session then adjourned.

RESOLUTIONS.

Mr. Gibbs offered the following resolutions, which were unanimously adopted by the Academy:

Resolved, That the thanks of the Academy be returned to the officers of the Boston Society of Natural History and of the Massachusetts Institute of Technology for the excellent accommodations which have done so much to render the meeting of the Academy successful as well as agreeable.

Resolved, That the Academy acknowledges, with grateful appreciation, the abounding hospitality of the president and fellows of Harvard University, and the opportunity which has been offered to its members to visit the beautiful collections and admirable equipment of the university.

Resolved, That the Academy returns thanks to the St. Botolph Club for the use of its club house, feeling that literature and art are the sisters of science.

Resolved, That the Academy, warmly sympathizing with the higher education of woman, gratefully appreciates the opportunity of visiting the Harvard Annex.

Resolved, That the invitation of the trustees of the Museum of Fine Arts was a delicate and graceful attention, which demands an expression of the sincere thanks of the Academy.

Resolved, That the Academy returns thanks to the Thursday Evening Club and to Mr. Montgomery Sears for the most agreeable invitation to meet with the club, an invitation the more acceptable in that an honored president of the Academy was also president of the Thursday Evening Club.

Resolved, That the hearty thanks of the Academy are tendered to the members of the local committee for their most efficient, thoughtful, and generous provision for the comfort and convenience of the members.

DEATH OF MEMBER.

The president announced the death of Prof. C. H. F. Peters, a member of the Academy, who died July 18, 1890, at Clinton, N. Y. Mr. Charles A. Schott was appointed to prepare the biographical memoir.

The Academy adjourned to meet in Washington on the third Tuesday in April, 1891.

Respectfully submitted.

O. C. MARSH,

President of the National Academy of Sciences.

APPENDICES.

APPENDIX A.

AN ACT to incorporate the National Academy of Sciences.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Louis Agassiz, Massachusetts; J. H. Alexander, Maryland; S. Alexander, New Jersey; A. D. Bache, at large; F. A. P. Barnard, at large; J. G. Barnard, United States Army, Massachusetts; W. H. C. Bartlett, United States Military Academy, Missouri; U. A. Boyden, Massachusetts; Alexis Caswell, Rhode Island; William Chauvenet, Missouri; J. H. C. Coffin, United States Naval Academy, Maine; J. A. Dahlgren, United States Navy, Pennsylvania; J. D. Dana, Connecticut; Charles H. Davis, United States Navy, Massachusetts; George Engelmann, Saint Louis, Mo.; J. F. Frazer, Pennsylvania; Wolcott Gibbs, New York; J. M. Gilliss, United States Navy, District of Columbia; A. A. Gould, Massachusetts; B. A. Gould, Massachusetts; Asa Gray, Massachusetts; A. Guyot, New Jersey; James Hall, New York; Joseph Henry, at large; J. E. Hilgard, at large, Illinois; Edward Hitchcock, Massachusetts; J. H. Hubbard, United States Naval Observatory, Connecticut; A. A. Humphreys, United States Army, Pennsylvania; J. L. LeConte, United States Army, Pennsylvania; J. Leidy, Pennsylvania; J. P. Lesley, Pennsylvania; M. F. Longstreth, Pennsylvania; D. H. Mahan, United States Military Academy, Virginia; J. S. Newberry, Ohio; H. A. Newton, Connecticut; Benjamin Peirce, Massachusetts; John Rodgers, United States Navy, Indiana; Fairman Rogers, Pennsylvania; R. E. Rogers, Pennsylvania; W. B. Rogers, Massachusetts; L. M. Rutherford, New York; Joseph Saxton, at large; Benjamin Silliman, Connecticut; Benjamin Silliman, junior, Connecticut; Theodore Strong, New Jersey; John Torrey, New York; J. G. Totten, United States Army, Connecticut; Joseph Winlock, United States Nautical Almanac, Kentucky; Jeffries Wyman, Massachusetts; J. D. Whitney, California; their associates and successors duly chosen, are hereby incorporated, constituted, and declared to be a body corporate, by the name of the National Academy of Sciences.

SEC. 2. *And be it further enacted,* That the National Academy of Sciences shall consist of not more than fifty ordinary members, and the said corporation hereby constituted shall have power to make its own

organization, including its constitution, by-laws, and rules and regulations; to fill all vacancies created by death, resignation, or otherwise; to provide for the election of foreign and domestic members, the division into classes, and all other matters needful or usual in such institution, and to report the same to Congress.

SEC. 3. *And be it further enacted*, That the National Academy of Sciences shall hold an annual meeting at such place in the United States as may be designated, and the Academy shall, whenever called upon by any Department of the Government, investigate, examine, experiment, and report upon any subject of science or art, the actual expense of such investigations, examinations, experiments, and reports to be paid from appropriations which may be made for the purpose, but the Academy shall receive no compensation whatever for any services to the Government of the United States.

Approved, March 3, 1863.

AN ACT to amend the act to incorporate the National Academy of Sciences.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the act to incorporate the National Academy of Sciences, approved March three, eighteen hundred and sixty-three, be, and the same is hereby, so amended as to remove the limitation of the number of ordinary members of said Academy as provided in said act.

Approved, July 14, 1870.

DEPARTMENT OF STATE, *June 10, 1882.*

True copies.

SEVELLON A. BROWN,
Chief Clerk.

AN ACT to authorize the National Academy of Sciences to receive and hold trust funds for the promotion of science, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the National Academy of Sciences, incorporated by the act of Congress approved March third, eighteen hundred and sixty-three, and its several supplements, be, and the same is hereby, authorized and empowered to receive bequests and donations, and hold the same in trust, to be applied by the said Academy in aid of scientific investigations, and according to the will of the donors.

Approved, June 20, 1884.

DEPARTMENT OF STATE, *June 24, 1884.*

A true copy.

SEVELLON A. BROWN,
Chief Clerk.

APPENDIX B.

CONSTITUTION AND RULES OF THE NATIONAL ACADEMY OF SCIENCES.

As amended and adopted April 17, 1872, and further amended April 20, 1875, April 21, 1881, April 19, 1882, April 18, 1883, and April 19, 1888.

PREAMBLE.

Empowered by the act of incorporation enacted by Congress, and approved by the President of the United States, on the 3d day of March, A. D. 1863, and in conformity with the amendment to said act, approved July 14, 1870, the National Academy of Sciences adopts the following amended constitution and rules :

ARTICLE I. OF MEMBERS.

SEC. 1. The Academy shall consist of members, honorary members, and foreign associates. Members must be citizens of the United States.

SEC. 2. Members who, from age or inability to attend the sessions of the Academy, wish to resign the duties of active membership, may, at their own request, be transferred to the roll of honorary members by a vote of the Academy.

SEC. 3. The Academy may elect fifty foreign associates.

SEC. 4. Honorary members and foreign associates shall have the privilege of attending the meetings, and of reading and communicating papers to the Academy, but shall take no part in its business, shall not be subject to its assessments, and shall be entitled to a copy of the publications of the Academy.

ARTICLE II.—OF THE OFFICERS.

SEC. 1. The officers of the Academy shall be a president, a vice-president, a foreign secretary, a home secretary, and a treasurer, all of whom shall be elected for a term of six years, by a majority of votes present, at the first stated session after the expiration of the current terms, provided that existing officers retain their places until their successors are elected. In case of a vacancy, the election for six years shall be held in the same manner at the session when such vacancy occurs, or at the next stated session thereafter, as the Academy may direct. A vacancy in the office of treasurer or home secretary may, however, be filled by appointment of the president of the Academy until the next stated session of the Academy.

SEC. 2. The officers of the Academy, together with six members to be elected by the Academy at the first stated session in each year, shall constitute a council for the transaction of such business as may be assigned to them by the constitution of the Academy.

SEC. 3. The president of the Academy, or, in case of his absence or inability to act, the vice-president, shall preside at the meetings of the Academy and of the council, shall name all committees except such as are otherwise especially provided for; shall refer investigations required by the Government of the United States to members especially conversant with the subjects, and report thereon to the Academy at its session next ensuing; and, with the council, shall direct the general business of the Academy.

It shall be competent for the president, in special cases, to call in the aid, upon committees, of experts or men of special attainments, not members of the Academy.

SEC. 4. The foreign and home secretaries shall conduct the correspondence proper to their respective departments, advising with the president and council in cases of doubt, and reporting their action to the Academy at one of the stated sessions in each year.

It shall be the duty of the home secretary to give notice to the members of the place and time of all meetings, of all nominations for membership, and of all proposed amendments to the constitution.

The minutes of each session shall be duly engrossed before the next stated session, under the direction of the home secretary.

SEC. 5. The treasurer shall attend to all receipts and disbursements of the Academy, giving such bond and furnishing such vouchers as the council may require. He shall collect all dues from members, and keep a set of books showing a full account of receipts and disbursements. He shall present a general report at the April session. He shall be the custodian of the corporate seal of the Academy.

ARTICLE III.—OF THE MEETINGS.

SEC. 1. The Academy shall hold one stated session in each year, in the city of Washington, on the third Tuesday in April, and another may be held at such place and time as the council shall determine.

Special sessions of the Academy may be called, by order of eight members of the council, at such place and time as may be designated in the call.

Scientific sessions of the Academy may be held at times and places to be designated by a majority of the council.

SEC. 2. The names of the members present at each daily meeting shall be recorded in the minutes; and the members present at any meeting shall constitute a quorum for the transaction of business.

SEC. 3. Scientific meetings of the Academy, unless otherwise ordered by a majority of the members present, shall be open to the public; those of the transaction of business, closed.

SEC. 4. The stated meetings of the council shall be held during the stated or special sessions of the Academy. Special meetings may be convened at the call of the president and two members of the council, or of four members of the council.

SEC. 5. No member who has not paid his dues shall take part in the business of the Academy.

ARTICLE IV.—OF ELECTIONS AND RESIGNATIONS.

SEC. 1. All elections shall be by ballot, and each election shall be held separately, unless otherwise ordered by this constitution.

SEC. 2. The time for holding an election for officers shall be fixed by the Academy at least one day before the election is held.

SEC. 3. The six additional members of the council shall be elected on any day after the first of the first stated session in each year, by each voter inscribing six names on his ballot, and those six who have received more votes than any others shall be declared elected. If two or more names have received the lowest number of votes that would elect, additional balloting shall be had for as many members as remain each time to be elected until the number is full.

The term of the members so elected shall commence at the close of the session at which they are elected, and continue until the close of the first stated session in the next year.

SEC. 4. Nominations of members may be made in writing, signed by any five members of the Academy, at any stated session, to be voted on at the next stated session held in Washington, and each nomination shall, at the time of election, be accompanied by a written list of the original works of the nominee.

SEC. 5. Elections for membership shall be held in the following manner: Each member may inscribe on a ballot not more than five names of nominees selected from the list. Absent members may send such ballots to the home secretary. From the seven names receiving the highest number of votes in this preference ballot, the members present may proceed to elect new members in the following manner: At each ballot, each member present may vote for not exceeding three persons, and the person receiving the highest number of votes shall be declared elected, provided that he received two-thirds of the votes cast and that his name appear on not less than twenty ballots; and provided further, that the number of members of the Academy be not already one hundred or over, in which case to be declared to be elected he must receive four-fifths of the votes cast, and his name must appear on at least twenty-five ballots.

Should several candidates have the same minimum number of votes on the preference list, the requisite number for completing the list shall be selected from them by a two-thirds vote of the members present.

Election of members shall be held only at the regular stated session of each year held in Washington, and not more than five members shall be elected at that session.

Before and during elections, a discussion of the merits of nominees will be in order.

The election of members may be suspended at any time by a majority vote of the members present.

SEC. 6. Every member elect shall accept his membership, personally or in writing, before the close of the next stated session after the date of his election. Otherwise, on proof that the secretary has formally notified him of his election, his name shall not be entered on the roll of members.

SEC. 7. Foreign associates may be nominated by a committee of five members to be appointed for that purpose by the president, and elected at any stated session by a two-thirds vote of the members present. The election shall be had by each member indicating on a ballot those names for which he votes, and those nominees whose names appear on two-thirds of the ballots shall be elected.

SEC. 8. A diploma, with the corporate seal of the Academy and the signatures of the officers, shall be sent by the appropriate secretary to each member on his acceptance of his membership, and to foreign associates on their election.

SEC. 9. Resignations shall be addressed to the president and acted on by the Academy.

ARTICLE V.—OF SCIENTIFIC COMMUNICATIONS, PUBLICATIONS, AND REPORTS.

SEC. 1. Communications on scientific subjects shall be read at scientific meetings of the Academy, and papers by any member may be read by the author or by any other member, notice of the same having been previously given to the secretary.

SEC. 2. Any member of the Academy may read a paper from a person who is not a member, and shall not be considered responsible for the facts or opinions expressed by the author, but shall be held responsible for the propriety of the paper.

Persons who are not members may read papers on invitation of the president, with the advice of the council.

SEC. 3. The Academy may provide for the publication, under the direction of the council, of proceedings, memoirs, and reports.

SEC. 4. Propositions for investigations or reports by the Academy shall be submitted to the council for approval, except those requested by the Government of the United States, which shall be acted on by the president, who will in such cases report their results to the Government as soon as obtained, and to the Academy at its next following stated session.

SEC. 5. The advice of the Academy shall be, at all times, at the disposition of the Government, upon any matter of science or art within its scope.

SEC. 6. An annual report to be presented to Congress shall be prepared by the president, and before its presentation, submitted by him, first to the council, and afterwards to the Academy, at one of the stated sessions.

SEC. 7. Medals and prizes may be established, and the means of bestowing them accepted by the Academy, upon the recommendation of the council, by whom all the necessary arrangements for their establishment and award shall be made.

Bequests and trusts having for their object the advancement of science may also be accepted and administered by the Academy.

ARTICLE VI.—OF THE PROPERTY OF THE ACADEMY.

SEC. 1. All investments shall be made by the treasurer, in the corporate name of the Academy, in stocks of the United States; or, with the approval of the council, in State bonds, or first mortgage bonds, or real estate. The treasurer shall have authority, with the approval of the council, to sell and transfer any United States bonds held by him in the corporate name of the Academy.

SEC. 2. No contract shall be binding upon the Academy which has not been first approved by the council.

SEC. 3. The assessments required for the support of the Academy shall be fixed by the Academy on the recommendation of the council.

ARTICLE VII.—OF ADDITIONS AND AMENDMENTS.

Additions and amendments to the constitution shall be made only at a stated session of the Academy. Notice of a proposition for such a change must be given at a stated session, and shall be referred to the council, which may amend the proposition, and shall report thereon to the Academy at the same session. Its report shall be considered by the Academy in committee of the whole for amendment.

The proposition as amended, if adopted in committee of the whole, shall be voted on at the next stated session, and if it receives two-thirds of the votes cast, it shall be declared adopted.

Absent members may send their votes on pending changes in the constitution to the home secretary in writing, and such votes shall be counted as if the member were present.

RULES.

I. In the absence of any officer, a member shall be chosen to perform his duties temporarily, by a plurality of *viva voce* votes, upon open nominations.

II. On the first day of each stated session, immediately after calling the roll of members, a recording secretary shall be elected by a plurality of members present to assist the home secretary in keeping the records of the session.

III. The accounts of the treasurer shall be referred to an auditing committee of three members, to be appointed by the president at the meeting at which the accounts are presented, which committee shall report before the close of that session, and shall then be discharged.

The bonds, securities, and other property owned or held in trust by the Academy shall be inspected and verified by a committee to be annually appointed by the president. The report of this committee shall be presented to the Academy at its first stated session in each year, and referred with the accounts to the auditing committee.

IV. A committee of arrangements consisting of five members shall be appointed by the president for each stated session of the Academy. This committee shall meet not less than two weeks previous to each session. It shall be in session during the meetings to make arrangements for the reception of the members; to arrange the business of each day; to receive the titles of papers, reports, etc.; and to arrange the order of reading, and, in general, to attend to all business and scientific arrangements.

It shall be the duty of the committee of arrangements to fix the length of time to be devoted to reading of all papers submitted, and to limit the time to be occupied in their discussion.

V. At the meetings, the order of business shall be as follows:

1. Chair taken by the president, or, in his absence, by the vice-president.
2. Roll of members called by home secretary.
3. Minutes of the preceding meeting read and approved.
4. Stated business.
5. Reports of president, secretaries, treasurer, and committees.
6. Business from council.
7. Other business.
8. On the last days of the session, the rough minutes of that day's proceedings are to be read for correction.

VI. The rules of order of the Academy shall be those of the Senate of the United States, unless suspended by unanimous consent.

VII. Unless otherwise ordered by the Academy, the scientific meetings shall be convened at noon.

VIII. The death of members shall be announced by the president on the last day of any session, when a member shall be selected by the president to furnish a biographical notice of the deceased at the next stated session. If such notice be not then furnished, another member may be selected by the president in place of the first, and so on until the duty is performed.

IX. The secretaries will receive memoirs at any time, and report the date of their reception at the next session. But no memoir shall be published unless it has been read before the Academy.

X. Memoirs shall date in the records of the Academy from the date of their presentation to the Academy, and the order of their presenta-

tion shall be that in which they were registered, unless changed by consent of the author.

XI. Papers from persons not members, read before the Academy, and intended for publication; shall be referred, at the meeting at which they are read, to a committee of members competent to judge whether the paper is worthy of publication. Such committee shall report to the Academy as early as practicable, and not later than the next stated session.

XII. An annual of the Academy shall be prepared and published by the secretaries.

XIII. The printing of the Academy shall be under the charge of a committee of publication, to consist of the home secretary and four other members to be named by the president, with the advice and consent of the council.

XIV. The annual report of the Academy may be accompanied by a memorial to Congress in regard to such investigations and other subjects as may be deemed advisable, recommending appropriations therefor when necessary.

XV. The proper secretary shall acknowledge all donations made to the Academy, and shall report them at the next stated session.

XVI. The books, apparatus, archives, and other collections of the Academy shall be deposited in some safe place in the city of Washington. A list of the articles so deposited shall be kept by the home secretary, who is authorized to employ a clerk to take charge of them.

XVII. A stamp corresponding to the corporate seal of the Academy shall be kept by the secretaries, who shall be responsible for the due marking of all books and other objects to which it is applicable.

Labels, and other proper marks of similar device, shall be placed upon objects not admitting of the stamp.

XVIII. The treasurer is authorized to defray, when approved by the president, all the proper expenses of committees appointed to make scientific investigations at the request of departments of the Government, and in each case to look to the department requesting the investigation for reimbursement to the Academy.

XIX. Nominations for membership should state the full name, residence, the official position, and the special scientific studies of the candidate. A form of nomination shall be prepared by the home secretary.

XX. At least sixty days before the election, the members signing the nomination should furnish the home secretary with a sufficient number of printed copies of the list of the more important original works of the nominee to enable the secretary to furnish a copy to each member of the Academy.

XXI. Ballots for election of members may be sent by sealing them up in a blank envelope, and inclosing this in another, across the back of which is written the name of the sender, and which is addressed to the home secretary; such envelopes will be opened only by the tellers.

XXII. All discussions as to the claims and qualifications of nominees at meetings of the Academy will be held strictly confidential, and remarks and criticisms then made may be communicated to no person who was not a member of the Academy at the time of the discussion.

XXIII. Any rule of the Academy may be amended, suspended, or repealed on the written motion of any two members, signed by them, and presented at a stated session of the Academy, provided the same shall be approved by a majority of the members present.

By a resolution adopted January 12, 1864, the president is, *ex officio*, a member of all Government committees of the Academy.

APPENDIX C.

ORGANIZATION OF THE ACADEMY, 1890.

	Expiration of term.
MARSH, O. C., <i>President</i>	April, 1895

APPENDIX D.

PRELIMINARY REPORT ON THE INVESTIGATION OF THE NORTH MAGNETIC POLE.

[Correspondence.]

THE NATIONAL ACADEMY OF SCIENCES,
Washington, D. C., January 8, 1891.

SIR: I have the honor to transmit to you, herewith, a preliminary report made by a committee of the National Academy of Sciences, in accordance with a request contained in your communication of May 22, 1890. The questions relating to the North Magnetic Pole thus submitted to the Academy require more time for examination than was at first expected; but the investigation is still in progress, and I trust I may be able to transmit to you the complete report at an early day.

Very respectfully,

O. C. MARSH,
President of the National Academy of Sciences.

The SECRETARY OF THE TREASURY.

TREASURY DEPARTMENT, *May 22, 1890.*

SIR: I have the honor to forward herewith a copy of a letter from the Superintendent of the Coast and Geodetic Survey, of April 28, 1890, containing a request for the appointment by you of a committee composed of members of the National Academy of Sciences, or others familiar with the problems involved, to formulate a plan or scheme for a systematic search for the North Magnetic Pole.

As this Department may be called upon, through the Coast and Geodetic Survey, to aid in an exploration of the region containing this pole, and in view of the fact that the organic act under which the Academy exists declares that it shall, whenever called upon by any Department of the Government, report upon any subject of science or art, I respectfully request the appointment of a committee which shall make report as desired in the letter herewith.

Respectfully, yours,

GEO. L. BATCHELLER,
Acting Secretary.

Prof. O. C. MARSH,
President, National Academy of Sciences, New Haven, Conn.
S. Mis. 60—3

UNITED STATES COAST AND GEODETIC SURVEY,
Washington, D. C., April 28, 1890.

SIR: The importance of a re-determination of the geographical position of the North Magnetic Pole has long been recognized by all interested in the theory of the earth's magnetism or its application. The point as determined by Ross in the early part of this century was not located with that degree of accuracy which modern science demands and permits, and besides it is altogether likely that its position is not a fixed one. Our knowledge of the secular variation of the magnetic needle would be greatly increased by better information concerning this magnetic pole, and in my judgment, it would be the duty of the Government to offer all possible encouragement to any suitable organized exploring expedition which might undertake to seek for this information. I am informed that such an expedition is now contemplated, and in order that such coöperation and encouragement as may be deemed advisable on the part of the Coast and Geodetic Survey may lead to the best possible results, I respectfully request that you communicate with the President of the National Academy of Sciences and ask that a committee composed of members of that body, or others who are familiar with the difficult problems involved, be appointed to formulate a plan or scheme for carrying out a systematic search for the North Magnetic Pole, in accordance with which, the Survey might render such assistance as may be considered possible and desirable.

I am, respectfully yours,

T. C. MENDENHALL,
Superintendent.

The SECRETARY OF THE TREASURY.

YALE UNIVERSITY,
New Haven, Conn., June 16, 1890.

SIR: I have the honor to acknowledge the receipt of your communication of May 22, 1890, containing a request for the appointment of a committee composed of members of the National Academy of Sciences, or others familiar with the problems involved, to formulate a plan for a systematic investigation of the North Magnetic Pole. A letter from the Superintendent of the Coast and Geodetic Survey, dated April 28, 1890, explaining more fully the object of the proposed exploration, was inclosed with your communication.

In reply, I have the honor to inform you that, in accordance with this request, I have appointed the following committee:

Prof. S. P. Langley, Secretary, Smithsonian Institution, *Chairman.*

Gen. Henry L. Abbot, U. S. Army.

Prof. William P. Trowbridge, Columbia College.

Prof. Alfred M. Mayer, Stevens Institute.

Prof. Charles A. Schott, U. S. Coast and Geodetic Survey.

Prof. John Trowbridge, Harvard University.

Prof. Charles Carpmael, University of Toronto.

The members of this committee are all familiar with the important questions to be solved, and will give the subject careful consideration.

Very respectfully,

O. C. MARSH,

President, National Academy of Sciences.

The SECRETARY OF THE TREASURY.

PRELIMINARY REPORT.

Boston, November 12, 1890.

SIR: Referring to your letter of the 16th of June and to its inclosure of a letter from the Secretary of the Treasury requesting the appointment of a committee to formulate a plan for the investigation of the Magnetic North Pole; and also inclosing a letter from the Superintendent of the Coast and Geodetic Survey; I have the honor to state that the committee has met, and that, having laid before them the communication in question, they have instructed me to report as follows:

The committee wish to state that, in their opinion, a knowledge of the exact position of the Magnetic North Pole is not so desirable as a study of the changes in the magnetic elements to be obtained from a cordon of stations, stretching from Alaska to Newfoundland, supplemented also by stations in Siberia, which might be established by the Russian Government in connection with that of the United States Government.

Since, however, the language of the communications before the committee restricts the question to the best method of determining the exact position of the Magnetic North Pole, they feel that more definite information in regard to the nature of the country in the region to be investigated should be laid before them. They believe that this information can best be obtained from those who have visited the region in question, and that the committee at present can merely make general suggestions recommending the occupation of a cordon of stations in the neighborhood of the line of dip of 89° ; for instance, on Prince of Wales Land, Boothia, near Point Ogle, and on the west side of Victoria Straits.

The committee, however, wish to emphatically state that they only recommend the above stations if they prove accessible. They have no information as to their accessibility, and they therefore express no opinion upon this point.

They desire to state that, in their opinion, whatever points are occupied, or whatever system is adopted, it is of importance to secure simultaneous observations at all the stations; and further that the character of the apparatus to be employed is of such consequence that the committee reserve the discussion of it for a later and more deliberate report.

Your obedient servant,

S. P. LANGLEY,

Chairman.

Prof. O. C. MARSH,

President of the National Academy of Sciences.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 6, 1891.—Ordered to lie on the table and be printed.

Mr. CASEY presented the following

ADDRESS TO CONGRESS FROM THE NATIONAL BRICK MANUFACTURERS' ASSOCIATION OF THE UNITED STATES OF AMERICA, PRAYING THE PASSAGE OF THE TORREY BANKRUPT BILL.

INDIANAPOLIS, IND., *January 22, 1891.*

To the Congress of the United States:

The undersigned, the National Brick Manufacturers' Association of the United States of America, assembled in its fifth annual convention, respectfully urges upon your honorable bodies the passage of the Torrey bankrupt bill, and submits as reasons therefore the following:

(1) The members of this association, in their capacities as business men and manufacturers of bricks, which are extensively used in all the States of the Union, are interested in common with the persons, firms, and corporations to whom they sell their products in having their rights and responsibilities clearly and fully defined by one equitable, national uniform law, instead of by the varying laws of the States in which they do business.

(2) The members of this association, as the purchasers of large quantities of supplies, are interested in the passage of that bill in common with the persons, firms, and corporations from whom they purchase, as it will extend credit, prevent fraud, and restore and maintain confidence between business men, manufacturers, mechanics, and bankers.

(3) The members of this association, as consumers of commodities, are interested in the enactment of a law which will enable the sellers of goods to collect the price, or a part of it, of the goods sold, to the end that honest people who pay their debts will not have to pay in multiplied profits for the losses sustained by the sellers of goods to dishonest persons.

(4) The members of this association, in their dual capacities as debtors and creditors, are interested in the placing upon the statute books of a law which will be perfectly fair to them in those capacities, and therefore call upon the members of the Senate with one accord to defeat the resolution now upon the Senate Calendar providing for the striking from the above bill its involuntary features.

In view of the foregoing it is—

(1) *Resolved*, That the rights and responsibilities of business men participating in the commerce of the several States ought not to be changed whenever a State line is crossed, and that Congress is therefore called upon to enact at once a uniform national bankrupt act, as provided by the Federal Constitution.

(2) *Resolved further*, That the passage of a law which shall be a guaranty of fair dealing in commercial transactions on credit is designed in effect to increase the

capital invested in business by every business man, manufacturer, and mechanic in this, that it will give to him additional credit, open to him additional markets, and reduce the hazards of business.

(3) *Resolved further*, That it is an imperative duty upon the part of Congress to enact a law which shall give stability to commerce, because, in so doing, dishonest people will be prevented from fraudulently avoiding the payment of their debts, thereby leaving them, in effect, to be paid in multiplied profits by honest people who pay for what they consume.

(4) *Resolved further*, That dishonest men they are willing to purchase and sell under a law which gives to them reciprocal rights and responsibilities, and they therefore request the enactment of a bill containing provisions for both voluntary and involuntary bankruptcy.

(5) *Resolved further*, That this association expresses its belief that the Torrey bankrupt bill is of more importance to the whole people, without reference to residence, occupation, or political convictions, than any other measure now before Congress, and therefore respectfully and persistently requests that Congress shall consider and pass it at once.

A true copy from the records.

THEO. A. RANDALL,
Secretary.

O

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 6, 1891.—Ordered to be printed.

Mr. EDMUNDS submitted the following

ORDER:

Ordered, That, unless otherwise directed, on and after Monday next, February 9, during the residue of the present session of the Senate, a recess shall be taken, excepting on Saturdays, from 6 o'clock p. m., to 8 o'clock p. m.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 6, 1891.—Presented, referred to the Committee on Post-Offices and Post-Roads, and ordered to be printed.

Mr. EVARTS submitted the following

RESOLUTION OF THE LEGISLATURE OF NEW YORK URGING THE PASSAGE OF THE JOINT RESOLUTION APPOINTING A COMMISSION TO MAKE INQUIRIES AS TO THE FACILITIES OF THE POST-OFFICE AT NEW YORK CITY AND REPORT UPON A PLAN, IF DEEMED EXPEDIENT, WHEREBY SUCH FACILITIES MAY BE INCREASED.

STATE OF NEW YORK.

IN SENATE, *Albany, January 29, 1891.*

Whereas, on January 17, 1891, the Hon. Roswell P. Flower introduced in the House of Representatives, at Washington, a joint resolution for the appointment of a commission, to consist of the Postmaster-General, the Secretary of the Treasury, the Attorney-General, ex-Postmaster-General James, and Charles A. Dana, whose duty it shall be to examine into the facilities of the New York post-office and report upon a plan, if deemed expedient, by which such postal facilities shall be increased; and,

Whereas on account of the great growth of the city of New York the present post-office has become entirely inadequate to meet the demands made upon it by a constantly growing business; and,

Whereas during the last fiscal year the gross receipts at this post-office were over \$6,000,000, and the net revenue to the United States Government was over \$3,770,000: Therefore, be it

Resolved (if the assembly concur), That the Senators and Representatives in Congress from this State be, and hereby are, respectfully urged to take all measures that they properly can to aid the adoption of the above resolution and the enactment of such other and further legislation as will be best calculated to afford to the city of New York, in the most speedy and ample manner, the increased postal facilities which her situation demands.

By order of the Senate:

JOHN S. KENYON, *Clerk.*

IN ASSEMBLY, *January 30, 1891.*

Concurred in without amendment.

By order:

CHAS. R. DE FREEST, *Clerk.*

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 9, 1891.—Submitted, referred to the Committee to Audit and Control the Contingent Expenses of the Senate, and ordered to be printed.

Mr. MANDERSON presented the following

CONCURRENT RESOLUTION:

Resolved by the Senate (the House of Representatives concurring therein), That the Committee on Public Printing, with three members of the present Congress who are reëlected to the next Congress, to be appointed by the Speaker of the House of Representatives, or any subcommittee of said special joint committee, are hereby instructed to examine into the numbers printed of the various documents, reports, bills, and other papers published by order of Congress, or of either House thereof, and of the Congressional Record, and to report a bill in December next, making such reductions in the numbers and cost of printing and such changes and reduction in the distribution of said publications as they may deem expedient, with a report giving their reasons therefor; and that the said committee is also instructed to investigate the printing and binding for the executive departments executed at the Government Printing Office and at the branch printing offices and binderies in the various Departments, and report a bill in December next, making such reductions in expenses and imposing such checks as they may deem expedient, with a report giving their reasons therefor; and said committee is further instructed to make any other investigation calculated in their opinion to reduce the cost of the public printing, and report the result thereof; and the said committee is hereby authorized to employ a stenographer, to summon and examine experts and witnesses, and to call upon the heads of executive departments and the Public Printer for such information regarding the preceding matters as they may desire; and any expenses necessarily incurred in making the investigations aforesaid shall be defrayed from the contingent fund of the Senate upon vouchers approved by the chairman of the Committee on Printing.

○

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 10, 1891.—Submitted, referred to the Committee on Printing, and ordered to be printed.

Mr. HOAR submitted the following

A M E N D M E N T :

[Intended to be proposed to the resolution reported by Mr. MANDERSON, from the Committee on Printing, February 9, 1891.]

Amend the resolution by inserting after the words “with a report giving their reasons therefor” the following: “which bill shall include provision for the regular supply of the larger public, university, and college libraries of the United States with public documents.”

○

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 9, 1891.—Presented by Mr. Edmunds, referred to the Committee on Appropriations, to accompany amendment to bill H. R. 13462, and ordered to be printed.

LETTER

FROM

THE ATTORNEY-GENERAL,

RECOMMENDING

An appropriation for the transportation of judicial and other officers connected with the administration of justice in the Territory of Alaska between the seat of Government there and such places as courts may be held.

DEPARTMENT OF JUSTICE,
Washington, D. C., February 7, 1891.

SIR: Inclosed I hand you a copy of a letter just received from Judge Bugbee, of Alaska. The letter speaks for itself. It calls attention to needs in the administration of the laws in that District which seem to require a remedy. It seems to me a feasible suggestion that is made; that is, a law authorizing and requiring the Secretary of the Treasury to furnish to the officials of Alaska a revenue cutter for the transportation of the judicial and other officers from Sitka to Unga, Kodiak, and Oonalaska for the purpose of holding occasional courts there. Without something of this kind it is difficult to see how the laws can be enforced and life and property protected. There ought, I think, also to be some provision for paying the expenses of the judge when out in remote districts holding court. As you will see by this letter, the Comptroller holds that he is not authorized to allow accounts of the judge for expenses except when he is actually traveling. In other words, if he goes to a place and holds court and is under expense there, that he is not entitled to credit for his expenses. This, I think, should be otherwise.

Yours, truly,

W. H. H. MILLER,
Attorney-General.

Hon. GEO. F. EDMUNDS,
Chairman, United States Senate.

SITKA, ALASKA, *January 9, 1891.*

SIR: Referring to your letter of December 3 last (A. G. 11707-1890), briefly acknowledged by me on December 27, in which you request me to consult carefully with the United States attorney and the United States marshal and any other officials who may be at Sitka, and write you my views with reference to the necessities in the way of more or different court facilities in the Territory, notably Unga, Kodiak, and Oonalaska, the reasons why such necessities exist, and what remedy in my judgment would be available to repress crime and preserve order in the Territory, I would say that the whole subject has been on many and various occasions carefully considered and talked over by myself and the officials named by you, as well as the governor, clerk, court interpreter at Sitka, the deputy collector of customs, the United States commissioner and deputy marshal at Oonalaska, Dr. Sheldon Jackson, the commanders of the revenue cutters *Rush* and *Corwin*, and many citizens.

I believe that there is a great and urgent necessity for the holding of a term of court in western Alaska, either at Kodiak, Unga, or Oonalaska.

So strongly have I been impressed with this necessity that had it been in my power to execute it I should long before this, under the authority given the judge by section 3 of the organic act, have made an order directing the holding of a special session at one of the places mentioned. But it was not in my power, nor is it now, under existing circumstances with reference to transportation, which render necessary a voyage by the judge, clerk, marshal, district attorney, and interpreter from here to San Francisco, probable detention there, thence by sea to Oonalaska, long detention at that place, and a return by the same route, involving great expense to the Government, much individual outlay, and inconvenience, not to speak of peril, and prolonged absence from other and more pressing duties in this part of the Territory during the late spring and summer months, which cover the only season when western Alaska is accessible from here and when a jury can be obtained there.

Since the commencement of my term of office in December, 1889, there have been not less than four homicides reported as having occurred in western Alaska, but only one man has thus far been apprehended. He is now in jail here under indictment for murder. The other criminals have not been arrested. Lesser crimes in great numbers have undoubtedly been committed, but they have not been made public. The great expense and difficulty of communication and travel in that neighborhood, the lack of even mail facilities, the cost and labor of procuring and transporting witnesses, their reluctance to come here to testify, the want of proper officers to execute process, the uncertainty of punishment of criminals if arrested and brought so far for trial as Sitka, to which point they must necessarily be brought, all contribute to the failure to bring wrongdoers to justice, and consequently lead to disregard of the law and defiance of the Government. If fear of punishment deters from crime, little need be apprehended by lawless persons in western Alaska. The power and authority of the United States commissioner and deputy marshal at Oonalaska, without means of enforcing the law, stand for very little in that vicinity, except, perhaps, in the eyes of the helpless natives, whose crimes, when not petty and inspired by liquor illegally obtained, arise mostly from blind obedience to tribal laws and customs, which, however reprehensive in a civilized point of view, they have been taught to believe just and binding.

It is my opinion that a term of court at one of the places named and the speedy trial and conviction, if guilty, of such law-breakers as

might be brought to justice, would decrease crime just as surely as neglect to execute the laws would increase it. Lawless men will congregate where they feel the law will not reach them. Such a display of power to right wrongs and punish crimes would be wholesome in its effect not only upon the whites but upon the natives, to the latter of whom it would be a grand object lesson in Governmental supremacy. As it now is their few ideas in that regard have been derived mainly from an occasional visit of a revenue cutter, and they are probably in utter ignorance of the existence of a Territorial government.

Undoubtedly the executive and judicial powers under the organic act are ample for present purposes in western Alaska if means were afforded for their proper exercise, and, under them, life and property can be fully protected as, long ago, the Government promised to protect them.

But laying aside all questions of duty and expediency it would, I think, solely in an economic point of view, be to the advantage of the Government to have a term of court held in western Alaska every year or two; as, occasion might demand; as, for illustration, the defendant now under indictment for murder, of whom I have just spoken, when arraigned, demurred, and his counsel stated that even if he pleaded not guilty he would not be ready for trial before the May, and possibly, the November term, on account of absence of witnesses. The district attorney was in the same situation. All the witnesses reside at the westward and must be brought here at the expense of the Government, via San Francisco, unless the Government sees fit to furnish a vessel for the purpose. The mileage of the witnesses who testified before the grand jury has also to be paid by the Government. I have no doubt that the expenses in this one case will equal the expense of holding a term of court at Ounalaska; and by the holding of such a term in the spring at that place the necessity for bringing such witnesses here will be obviated.

Let me add here the suggestion that a like visitation by the governor, concurrent or otherwise, but perhaps better concurrent, is very desirable, as has been very plainly shown in the results of his frequent intercourse with the natives in the southeastern part of the Territory.

My suggestions are that the Government furnish at an early date a mail steamer for the conveyance of the governor and court officials from Sitka to Ounalaska, stopping at Unga and Kodiak, and giving postal facilities as well, or that it place at the disposal of the governor, marshal, or judge, for the same purpose, a revenue cutter or naval vessel for the period of two months between May 1 and October 1 next.

I wish, however, in this connection, to add certain suggestions, which I shall endeavor to make the subject of a separate letter to yourself and the Secretary of the Treasury by this mail.

Under your rulings contained in letter of May 29, 1890 (H. H. 7724-1889), my claim for the sum of \$55 for board and lodging while holding a term of court at Juneau in January, 1890, which I consider actual and necessary expense while traveling in the discharge of my duty, as provided in the organic act, were disallowed, although similar claims by the marshal and district attorney have been allowed and paid by the Treasury Department. It is fair to assume that a similar claim by me, if a term of court were held at Ounalaska, would also be disallowed, thereby forcing upon me an expenditure greatly beyond that incurred by remaining here and beyond that incurred by the marshal and district attorney.

The Treasury Department has disallowed the payment by the clerk,

under my order, out of the hire and forfeiture fund (the disbursement of which I and my predecessors have always claimed rested with the judge and not the Treasury Department) of the traveling expenses, as well as the board and lodging at Juneau at the same term of the clerk, deputy marshal, and interpreter.

The presence of these officers would be absolutely necessary at any term to be held at Ounalaska or elsewhere.

Whatever willingness I, myself, might have to pay my own expenses while holding such a term, I can not answer for a like disposition on the part of the officers named. Indeed, it would be safe to say that in view of the heavy disbursements they would be called upon to make they would not go there or elsewhere unless *all* their actual and necessary expenses were defrayed by the Government, and I certainly should not feel justified, even at the request of the Department, in ordering a term of court to be held away from the capital.

It follows, therefore, that unless these rulings are revised or other arrangements made at Washington, no term of court can be held in Alaska at any other place than Sitka.

I shall show this letter to Governor Knapp, who will doubtless communicate to you his views upon the subjects of your inquiry.

Respectfully,

JOHN S. BUGBEE,

United States District Judge, District of Alaska.

The ATTORNEY-GENERAL,

Washington, D. C.

I most heartily concur in the foregoing recommendation that a term of court be held at some place in western Alaska. Unless some measures are soon taken to facilitate the administration of the Government and enforce the laws, the lawlessness and crime already too common will be greatly increased. I believe the United States Government is under obligation, in justice to its people, to put western Alaska in close and constant relations with the local government it has established in the Territory. But the holding of a single term of court and an occasional visit by the executive in that section would be of incalculable benefit.

LYMAN E. KNAPP,

Governor of Alaska.

[Report No. 2192.]

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 11, 1891.—Reported, placed on the Calendar, and ordered to be printed.

Mr. TELLER, from the Committee on Privileges and Elections, reported
the following

RESOLUTION:

Resolved, That the Secretary of the Senate be, and he is hereby, authorized and directed to pay to the Hon. B. F. Rice, late a Senator from Arkansas, the amount due him as Senator in the Fortieth Congress from the 4th of March, 1867, till he was paid. Said payment to be made from the miscellaneous items of the contingent fund of the Senate.

○

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 13, 1891.—Reported and ordered to be printed.

Mr. DAWES, from the Committee of Conference, submitted the following

CONFERENCE REPORT:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 12499) "making appropriations for fortifications and other works of defense, for the armament thereof, for the procurement of heavy ordnance for trial and service, and for other purposes," having met, after full and free conference have agreed to recommend, and do recommend, to their respective Houses as follows:

That the Senate recede from its amendments numbered 4, 7, and 8.

That the House recede from its disagreement to the amendments of the Senate numbered 2, 3, 5, 9, 12, and 13, and agree to the same.

Amendment numbered 1.

That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment, as follows:

In lieu of the matter stricken out by said amendment insert the following:

ARTESIAN WELL AT FORT MONROE, VIRGINIA: *For obtaining water for the garrison, six thousand dollars,* and the Senate agree to the same.

Amendment numbered 6.

That the House recede from its disagreement to the amendment of the Senate numbered 6, and agree to the same with an amendment, as follows:

At the end of the amended paragraph insert the following:

Provided, That no contract for the expenditure of any portion of the money herein provided or that may be hereafter provided for the purchase of steel shall be made until the same shall have been submitted to public competition by the Department by advertisement, and the Senate agree to the same.

Amendment numbered 10.

That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment as follows:

In lieu of the sum proposed insert *one hundred and fifty thousand dollars,* and the Senate agree to the same.

Amendment numbered 11.

That the House recede from its disagreement to the amendment of the Senate numbered 11, and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by said amendment, insert the following:

And one additional member shall be added to said Board of Ordnance and Fortifications who shall be a civilian and not an ex-officer of the regular Army or Navy, and he shall be nominated by the President, and by and with the advise and consent of the Senate appointed, and shall be paid a salary of five thousand dollars per annum and actual traveling expenses when traveling on duty: Provided, That the Board of Ordnance and Fortifications shall make an annual report to Congress, through the Secretary of War, on the first Monday in December in each year, showing the general operations of the Board and shall give a detailed statement of all contracts, allotments, and expenditures made by the Board; the first of these reports to cover these subject-matters from the beginning of the operations by the Board until the first report which they shall make, and the Senate agree to the same.

H. L. DAWES,

P. B. PLUMB,

A. P. GORMAN,

Managers on the part of the Senate.

M. S. BREWER,

BENJ. BUTTERWORTH,

Managers on the part of the House.

FEBRUARY 13, 1891.—Reported and ordered to be printed.

Mr. DANIEL, from the Committee of Conference, submitted the following

CONFERENCE REPORT:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the House of Representatives to the bill (3770) "to incorporate the Washington and Arlington Railway Company of the District of Columbia," having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its disagreement to the House of Representatives amendments numbered 1, 2, 3, 4, 5, and 7, and agree to the same.

That the Senate recede from its disagreement to House amendment numbered 6, and agree to the same, with an amendment as follows:

Provided, that the entire issue of stock and bonds shall not exceed the actual cost of constructing and equipping the road, including the bridge; and provided, also, that the total amount of bonds issued shall not exceed double the amount of the paid-up stock; and every certificate of stock issued shall show the amount paid on same.

That the Senate recede from its disagreement to the House amendment numbered 8, and agree to the same, with the following amendments:

If, in the course of the construction of said railway, or at any time thereafter, it shall be deemed by the Secretary of War necessary for the better protection of such water-pipes, fixtures, or apparatus, or for other water-pipes, fixtures, or apparatus that may be laid or applied, to raise or otherwise fix or adjust any avenue, street, road, alley, or public place containing or to contain such pipes, or to otherwise adjust the same so as to produce absolute security for all such pipes and apparatus existing or to be laid or arranged at any point or points on or contiguous to the line of said railway, such changes in grade and otherwise, or works, as shall be deemed necessary by the Secretary of War shall be made, done, and performed by and at the expense of said railway company and its successors and assigns, to the satisfaction of the Secretary of War; and the remainder of width of any avenue, street, alley, road, or other public place, at all such points or places, shall be raised, adjusted, repaved, and put in condition safe for all such pipes and apparatus and in a manner satisfactory to the Secretary of War and in conformity to any order of the Secretary of War in the matter, and at the expense of said company and its successors and assigns. Any structure work in, or change in the condition of, any such avenue, street, road,

alley or public place, not made in conformity with the provisions in this act contained, shall be unlawful.

JAMES McMILLAN,

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 14, 1891.—Ordered to lie on the table and be printed.

Mr. PADDOCK presented the following

**MEMORIAL OF THE WOMAN'S NATIONAL INDUSTRIAL LEAGUE
OF AMERICA, URGING LEGISLATION FOR THE PREVENTION OF
THE ADULTERATION OF DRUGS, MEDICINES, FOODS, ETC.**

We, the memorialists, present to the Senate of the United States this our memorial praying that your honorable body might favorably consider our petition and enact stringent laws which will in the future prevent the abuses herein enumerated.

The adulterations practiced differ in kind as well as in degree. One form of adulteration consists in the addition of substances usually of greatly inferior value, for the sake of bulk and weight, the choice being determined by the cheapness of the substitute.

Another form of adulteration consists in the addition of coloring matters of various kinds, with a view to heighten the color, and, as it is considered, to improve the appearance of the articles, as well as to conceal other forms of adulteration. This is a very prevalent adulteration, and is the most objectionable and reprehensible of all, because substances are frequently employed for the purpose of imparting color possessing highly deleterious and even in many cases poisonous properties, such as preparations of lead, copper, mercury, and even arsenic; the latter especially is found in candies dyed with red aniline colors.

A third description of adulteration consists in the admixture of substances for the purpose of imparting smell, flavor, pungency, and other properties.

The fourth is the deception practiced by the manufacturers and venders of the so-called patent medicines, of some cosmetics, and above all the vile compounds known as soothing sirups, bitters, and preparations for the stimulation of the growth of hair.

In the household, even the bread purchased contains alum, inferior and musty flour, and often mashed potatoes and white sand.

Butter contains oleomargarine, lard, annotto coloring, and sometimes even coarse beef and mutton fat.

Coffee: Several samples bought by the league in different parts of the city were sent to experts for analysis and roasted wheat, rye, corn, burnt beans; one sample contained roasted acorns and mud flavored with the essence of coffee.

Tea: Samples purchased contained mostly exhausted tea leaves, dried over again; some were adulterated with leaves of the horse-chestnut tree, leaves of the sycamore and plum tree.

The coloring of tea was composed of indigo, turmeric mixed with Prussian blue and black lead. Sugars and sirups contained glucose, burnt starch, and the powdered sugar flour and ground starch.

Lard extensively adulterated, the ingredients being water and flour, as well as potash, alum, carbonates of potash and soda, and caustic lime, these being intended either to cause the lard to hold water or to improve its consistence as well as color; the admixture of cotton-seed oil, and even fats from the entrails of animals.

Candies: Several samples were purchased and analyzed. Yellow candies were colored with lemon chrome and the pale variety with chromate of lead. Red candies contained aniline dyes, red lead, and even vermilion; brown candies, sienna earths; purple, an admixture of indigo, Prussian blue, and some red pigment; green candies, carbonate of copper, chromate of lead, and Prussian blue.

Extract of beef, especially in the liquid form, contains glue in solution.

Cider, with not a trace of the apple, consisted of vinegar, some alcohol, and molasses.

Honey in bottles admixed with glucose and pale sirup.

Mustard: Wheat flour colored with turmeric.

Marmalade made of the pulp of the apple or turnip, flavored with the rind of the orange or lemon.

Black pepper, mixed with wheat and corn flour, ground rice, ground mustard seeds, linseed meal, and coarse pepper dust.

Bitters, composed of the vilest stuff of raw whisky full of fusil oil, which in itself is a most poisonous ingredient.

Claret wine, made of decaying raisins, colored with logwood.

Brandy, with not a trace of the grape juice, but an admixture of whisky, alcohol, flavored with artificial oil of cognac—a very poisonous ingredient, imported mostly from Germany—colored with burnt sugar.

Patent medicines, composed of the violent narcotics, mercury, and adulterated drugs as well as chemicals, which for a moment numb the pain but do not reach the cause of the disorder. Ingredients which no regular practicing physician would dare to prescribe form the basis of these secret remedies, and they are sold under fictitious names. Antipyrene is used in patent medicines for the relief of headache, but the frequent use of the same has only too often resulted in partial paralysis of the brain. Bromide of potash forms the basis of most of the advertised remedies to cure epileptic fits. Momentary relief is often obtained from the use of that chemical, but the repeated administration of patent medicines containing bromide produce paralysis of the spine.

Patent medicines advertised ostensibly for the cure of opium habits contain morphine in solution, and the cravings for these deceptive liquids by the unfortunate are often beyond power of resistance. Elixirs of opium advertised under fictitious names are sold all over this country, and are to be found in every drug store.

But the vilest of all compounds which contain morphine in solution is known as "Mrs. Winslow's Soothing Sirup." This soothing sirup is fraudulently advertised as a harmless medicine; it quiets the children and produces a sound but most unhealthy sleep. This "soothing sirup" has killed thousands of children, as well as hundreds of other quack medicines, and those who have survived have only too often become idiots and thousands of them are now in lunatic asylums. The consequence is, insanity is alarmingly on the increase in this country at the expense of the States and Territories; in some States as high as 40 per cent. within the past decade. The Governments of France, Russia, and Germany have prohibited the importation of "Mrs. Winslow's Soothing Sirup." Mothers, in their innocence, administer this subtle poison hourly to their children.

When in October of last year the Druggists' Association, representing millions of capital of the leading patent-medicine manufacturers in this country, held its meeting at the Arlington Hotel in this city, the president of the Woman's National Industrial League presented a memorial. In the same mention was made and protest entered against that vile and poisonous stuff "Mrs. Winslow's Soothing Sirup." The Druggists' Association took exception to this, and unless the sentence condemning this vile and poisonous sirup was stricken out they declined to entertain that memorial.

We refused to strike out the objectionable soothing sirup paragraph and our memorial was not presented to the convention. Upon further discussion with the members of that association, assertion was made that if a clause be presented to the Senate for the prohibition of this soother and similar compounds, they would spend half a million dollars to defeat the bill.

The industrial classes, of both sexes, being not always able to procure medical assistance, are forced to resort to the patent medicines. So they are the largest consumers; it is therefore of vital importance and imperatively necessary for the protection of the industrial classes that a stringent law be enacted and that the ingredients which form these medicines be printed upon each label and the omission of the same as well as the misrepresentation being not only punishable by a fine, but always with imprisonment and confiscation of these deceptive nostrums.

As to the adulteration of articles of food the industrial women which your memorialists represent are by far the greatest sufferers. Not only are they swindled out of their meager earnings, but their health is jeopardized as well by consuming vile and adulterated compounds. Therefore we pray for strict legislation on this subject.

CHARLOTTE SMITH,

President Woman's National Industrial League of America.

CATHERINE BERGEN,

Secretary.

WASHINGTON, D. C., *February 4, 1891.*

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 16, 1891.—Presented; referred to the Committee on Foreign Relations and ordered to be printed.

Mr. PLUMB presented the following

MEMORIAL OF THE UNIVERSAL PEACE UNION, UNITED STATES
OF AMERICA, FOR THE APPOINTMENT OF A COMMISSION TO
SECURE AN INTERNATIONAL COURT OF ARBITRATION.

*Memorial to the Senate and House of Representatives of the United States
of America in Congress assembled.*

Whereas your memorialists are convinced that the military system could not be introduced among civilized nations in this age were it not already fastened upon us, being fostered by long standing, nurtured by selfishness, and protected by prejudice against the dictates of reason and justice; and

Whereas we are convinced that military rules and practices are antagonistic to right, truth, and liberty, and we believe the present age is fully ripe for the creation and maintenance of an international tribunal of arbitration, giving each nation equal representation, the efficiency of which will make it successful in the adjustment of all national and international disputes when nations by negotiation have failed to agree:

Therefore we earnestly petition your honorable body to create a commission to visit other civilized governments to induce them to unite in the organization of an international tribunal of arbitration, with the sole and only object to hear and determine such vexed questions as nations have failed to determine among themselves and which would otherwise result in a declaration of war.

Equal safety for the weaker nations with the stronger should be provided for.

No form of government or phase of religion should have preference in this tribunal, or any special language except such as may be determined by mutual agreement for the use of the tribunal.

Since such a tribunal will be the greatest safeguard for life, liberty,

peace, and prosperity of all people and the means to preserve the nations' highest honor and dignity; and since, without such a tribunal there is danger that devastating and cruel wars may occur, we feel an emergency exists for prompt and immediate action.

The VICE-PRESIDENT presented the following

ADDRESS AND RESOLUTIONS OF THE NATIONAL ASSOCIATION
OF BUILDERS, FORMULATED AND PASSED AT THE FIFTH AN-
NUAL MEETING, AT NEW YORK, FEBRUARY 12, 1891, PRAYING
THE IMMEDIATE PASSAGE OF THE TORREY BANKRUPT BILL.

NEW YORK, *February 12, 1891.*

The honorable the Senate and House of Representatives
in Congress assembled:

The National Association of Builders, composed of citizens of the
several States of the Union, respectfully submits for your consideration
an address and resolutions as follows:

THE ADDRESS.

The builders of the country pursue a calling founded upon mathe-
matical calculations, the strength of materials used, and the laws of
nature. They are willing, therefore, to conduct the business of their
calling upon the basis of the integrity of commercial transactions, ac-
cording to the rules of equity, and with due regard to the rights of
their competitors in business and the men with whom they deal both
as debtors and creditors.

The size, style, or expense of buildings is not varied in the several
States because of the difference in their general laws, but the builders
often find to their detriment that their rights are modified and their
responsibilities changed by such laws as they go from State to State
in the pursuit of their calling, and that there is thereby levied upon
them useless expense which otherwise would be saved to them and their
patrons. They, therefore, are interested in the enactment of a uniform,
equitable, national law, under which their rights shall at all times and
in all places be easily understood and readily enforced.

"To give and take by the same rule" has always been their practice,
and they are therefore interested in an absolute equality between the
volunteer parties to transactions on credit, and, for themselves and on
behalf of those with whom they deal, announce the necessity for a com-
prehensive law, embodying provisions for both voluntary and involun-
tary bankruptcy.

Attention is hereby called to the universal laws for the administra-
tion of the estates of deceased persons and the determination of the
rights of creditors as between themselves and against such estates, and
the necessity urged for a national law to govern the relationship and

determine the rights of the creditors and the bankrupt in the event of commercial death.

The United States is the only Nation of the first class upon the earth which has not in force a bankrupt law for the determination of the property rights of creditors, the prevention of bankruptcies, and the discharge of honest but unfortunate debtors, although the founders of Government foresaw the necessity for such a law and made ample provisions therefor in the Constitution.

THE RESOLUTIONS.

Resolved, That the integrity of commercial transactions must be maintained according to the rules of equity for the maintenance and the perpetuation of the commerce of the world.

Resolved further, That the variance of the State laws relating to insolvency is such as to discourage the extension of business transactions, create distrust between men in different parts of the country, and increase the cost of buildings.

Resolved further, That legislation which deals with the rights incident to voluntary transactions on credit should not favor either party thereto at the expense of the other, and that a law embodying provisions for voluntary to the exclusion of involuntary bankruptcy, or the the reverse, would be hurtful to the best business interests of the country, and should therefore not be countenanced in any form or for any purpose by our national legislators.

Resolved further, That since the Constitution of the United States reserves to Congress the sole power to enact a uniform law upon the subject of bankruptcies, and forbids the impairing of the obligation of contracts by the States, it is the duty of Congress to provide a national law pursuant to which the rights and responsibilities of bankrupts and their creditors will be as readily understood and as easily enforced as the probate laws of the various States.

Resolved further, That the United States should have as a part of its permanent laws a bankruptcy code, to the end that it may be abreast of the times and in accord with the position of the other first-class nations of the earth upon that subject.

Resolved further, That the ends recited above will be attained by the immediate passage of the Torrey bankrupt bill, now upon the calendar of the Senate awaiting consideration.

Resolved further, That a copy hereof be authenticated by our officers and forwarded to the Vice-President of the United States for presentation to the Senate, and to the Speaker for presentation to the House of Representatives.

The foregoing address and resolutions were, on the day indicated, submitted, considered, and unanimously adopted for the purpose therein expressed.

JOHN J. TUCKER,
President.

Attest:

WM. H. SAYWARD,
Secretary.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 18, 1891.—Presented, referred to the Committee on Indian Affairs, to accompany an amendment intended to be proposed to the Indian appropriation bill, and ordered to be printed.

Mr. STEWART presented the following

LETTER FROM THE COMMISSIONER OF INDIAN AFFAIRS, RECOMMENDING AN APPROPRIATION FOR THE MAINTENANCE OF THE INDIAN SCHOOLS AT CARSON CITY, NEV.

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, February 18, 1891.

SIR: Replying to your telephonic inquiry regarding the amount of money needed to carry on the school at Carson City, Nev., allow me to say that the school is now in very successful operation with, at last accounts, 105 pupils in attendance. These pupils were gathered very quickly and apparently without difficulty, soon after school opened. From the information which I have I am led to believe that it is entirely possible to maintain at that place a school of 200 at least. As you are well aware there are large numbers of Indians in that section of the country who have very poor or no school accommodations, and they seem eager to avail themselves of the opportunity offered at Carson of securing for their children an English and industrial training.

There is at present, as you know, but one building, which is used for all purposes—dormitory for boys and also for girls, school rooms, dining room, hospital, etc.

It would be very much better every way, especially if the school is to be increased in size, that there should be erected first a dormitory for boys to accommodate, say, 125. This would leave the present building for the exclusive use of the girls, not only increasing the capacity of the school, but rendering discipline much easier. This building could be erected by Mr. Gibson for probably \$20,000.

There should also be a hospital, which would cost probably \$3,000 more. It would be very greatly to the advantage of the school if there should be erected a separate school building.

I think, however, that it would be well to postpone that for another year, until it has been demonstrated that the number of pupils that can be secured for the school will render such a building absolutely necessary.

Mr. Gibson said to me on my visit to the school that there is a small piece of land lying near the present school premises, not particularly valuable in itself and worth but little for agricultural purposes, but which could be utilized, if I remember rightly, as a reservoir and be

made very valuable to the school. This land, he told me, could be purchased for \$300.

The cost of maintenance of pupils at that school is fixed at \$175 per capita per annum. If we care for 150 next year this will require an expenditure for support of \$25,250. If the attendance should reach 200, the cost of support would be \$35,000. It is possible to run the school in a very creditable way and take care of about 150 pupils by overcrowding and inconvenience for the sum of \$25,000.

My own judgment is that it is wise economy to enlarge the school so that it can care for 200. If you concur in this from your knowledge of the situation, I shall be very glad if you would ask the committee to change the appropriation so that it will stand:

For the support and education of Indian pupils at the Indian school at Carson City, Nev., at \$175 per annum each, and for the necessary buildings, repairs, and purchase of additional ground, and for the pay of superintendent of said school, at \$1,800 per annum, \$60,000.

Very respectfully,

T. J. MORGAN,
Commissioner.

Hon. W. M. STEWART,
United States Senate.

○

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 19, 1891.—Presented, referred to the Committee on Commerce, and ordered to be printed.

Mr. DOLPH presented the following

MEMORIAL OF THE COLUMBIA AND SNAKE RIVERS AUXILIARY
WATERWAY ASSOCIATION, PRAYING AN APPROPRIATION BY
CONGRESS FOR THE IMPROVEMENT OF SAID RIVERS.

WALLA WALLA, WASH.,
February 5-6, 1891.

*To the honorable the Senate and House of Representatives
of the United States :*

We, your memorialists, the representatives of the various boards of trades, chambers of commerce, farmers' alliances, and other organizations throughout the vast territory bordering upon and drained by the Columbia and Snake Rivers and their tributaries, in convention assembled at Walla Walla, Wash., respectfully represent and pray :

1. We have been drawn together by the long continued and burdensome exactions of the railway transportation companies and the present great distress of producers resulting from the total incapacity of these transportation companies to move to market the products of the territory we represent. We have suffered and are now suffering untold distress and embarrassment by reason of the present great grain blockade, resulting from the incapacity of these transportation companies, and we foresee only increased financial embarrassment and greater distress, which will inevitably follow the increased acreage of the next year throughout this great grain-producing territory.

2. We represent that, although the absence of proper transportation facilities has deterred our farmers from reducing to cultivation more than a fourth part of our fruitful soil, nevertheless the crop of grain harvested in the year 1890 so far exceeded the facilities of existing railroads to carry it to market, that much of it must inevitably remain unmarketed even after the next crop is harvested, and, as a natural consequence, in some remote districts can not be sold at any price; that there is no promise whatever of any relief from additional railroads; and that the natural outlet for the products of all this territory is by way of the Columbia and Snake Rivers.

3. We further represent that the most economical means for moving these products is by river transportation, and that the location of these two great rivers and their tributaries make them easily accessible to all of this immense inland empire.

4. We deplore the fact that these great navigable rivers, the natural arteries of commerce, in their present condition, are practically useless and wholly unused by the people of this inland empire, by reason of the obstructions now existing in them; we believe that all of these

obstructions can be and should be removed, and in view of the long delays in prosecuting the work of overcoming these obstructions, the time has come for us the more urgently to beseech Congress for immediate and permanent relief from the embarrassments and unreasonable freight rates under which we now labor.

5. We desire hereby to express our appreciation and gratitude to the Senators and Representatives from Oregon, Washington, and Idaho, and other friends in Congress, for the able manner in which they have heretofore advocated our cause in the securing of former appropriations, and especially to Senators Mitchell and Dolph and Representative Herman of Oregon for the long, continued, and urgent manner in which they have labored for this long needed improvement of these rivers.

6. We urgently pray that the Senate bill introduced by Senator Dolph, of Oregon, providing for a special appropriation of the estimated cost of completing the canal and locks at the Cascades of the Columbia be passed and made a law

7. We deplore the slowness and dilatory manner in which the work on the canal and locks at the Cascades has been conducted, and we believe that much valuable time and much money have been and are being wasted on this improvement by reason of the uncertainty and inadequacy of the appropriations.

8. We believe that the work upon these various improvements could be more economically and rapidly advanced if done by contract; and we recommend that hereafter all appropriations made for the improvements at the Cascades and The Dalles be conditioned upon the work provided for being let to the lowest responsible bidder, such contractor to work under the supervision of the Secretary of War, and to have the privilege of using the Government plant or outfit owned by the Government then upon the ground where the work is to be done; provided that in all cases when, after proper advertisement, no bids are received, the work be done in the usual way by the War Department.

9. We urgently ask that the bill introduced by Senator McConnell, of Idaho, appropriating \$100,000 for clearing obstructions from Snake River, be passed and made a law; and that the work already begun, of removing obstructions from the Columbia above the mouth of Snake River, be continued upon a liberal scale.

10. We believe that a ship railway, as recommended by the Oregon delegation in Congress, is the most economical, satisfactory, and expeditious plan for the permanent improvement at The Dalles of the Columbia; and we ask that the estimated cost of such improvement be so appropriated as that that work may be immediately begun and carried to completion without interruption or delay. And your memorialists will ever pray.

W. P. GRAY,
President.

C. J. TRENCHARD,
Secretary.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 19, 1891.—Presented; referred to the Committee on Railroads and ordered to be printed.

The PRESIDENT PRO TEMPORE presented the following

**MEMORIAL OF THE LEGISLATIVE ASSEMBLY OF MONTANA PRAY-
ING FOR THE PASSAGE OF A BILL PROMOTING THE CONSTRUC-
TION OF A RAILROAD BY THE MONTANA MINERAL RAILWAY
COMPANY.**

[House joint memorial No. 1.]

HOUSE JOINT MEMORIAL TO CONGRESS PRAYING FOR THE PASSAGE
OF A BILL PERMITTING THE CONSTRUCTION OF A RAILROAD BY THE
MONTANA MINERAL RAILWAY COMPANY.

*To the honorable the Senate and House of Representatives
of the United States in Congress assembled :*

Your memorialists, the second legislative assembly of the State of Montana, would most respectfully state the following facts :

First. One of the largest and most promising mining districts in the State of Montana lies very near to the northeastern boundary of the Yellowstone National Park (but without the limits of the same). This district is rich in silver, lead, and gold, and is known as the "New World mining district," and the town which has sprung up at that point is called "Cooke" or "Cooke City."

Second. Because of the large amount of lead in this district railroad transportation is a vital necessity to its practical development, and must be had before the large number of property owners of the section can realize on their holdings, or its wealth be added to that of Montana and the world. More than nine hundred bona-fide mining claims are opened in this district, and some of them have had many thousands of dollars expended on their development, with the most gratifying results, in so far as the amount of ore thereby exposed is concerned.

Third. In a mountainous country, such as that under consideration, it is obvious that, when possible, a railroad should follow the depressions of the country made by the water drainage, and that any other location of a railroad will, in comparison, be extremely costly and difficult to construct.

Fourth. Cooke City is drained by Soda Butte Creek, which empties into the east fork of the Yellowstone River, and which in turn empties into the Yellowstone River itself, and the only practicable route for a railroad (without the expenditure of enormous amounts of money in its construction) is from Cooke down along the streams mentioned to connect with the National Park Branch Railroad at Cinnabar, on the Yellowstone River, a distance from Cooke to Cinnabar along the route mentioned of about 62 miles.

Fifth. Almost the entire length of the proposed railroad route (which is also the route of the present wagon road) outlined above lies within the geographical limits of the Yellowstone National Park, but it is very near the northern boundary thereof, and is far removed from any object of interest to tourists, and consequently never visited by them.

Sixth. There is now pending in the House of Representatives Senate bill 491, which bill has been favorably reported by the House Committee on Public Lands, together with an amendment granting a right of way to the Montana Mineral Railway Company, which right of way is along the route herein specified, viz, from Cinnabar up either bank of the Yellowstone River and its tributaries directly to the New World (sometimes called Clark's Fork) mining district.

Therefore your memorialists pray that your honorable bodies will speedily cause the above referred to amendment to Senate bill 491, as reported by the House Committee on Public Lands, to be speedily enacted into a law and thereby remove an obstacle which prevents the advancement of an important section of our State.

And your memorialists will as in duty bound ever pray.

R. G. HUMBER,

Speaker pro tem., House of Representatives.

J. C. RICKARDS,

President of the Senate.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 21, 1891.—Submitted and ordered to be printed.

RESOLUTION

Intended to be offered by Mr. MCPHERSON.

Resolved, That in the judgment of the Senate it would be an act of wisdom and prudence on the part of the United States to engage in the work of constructing a canal across the isthmus at Nicaragua and Costa Rica, provided it may be done under the terms of a treaty to be negotiated between the Government of the United States and the Government of Nicaragua and acceptable to both Governments. Therefore, to accomplish this purpose, and to secure a water route between the two oceans, the President of the United States is hereby requested to open negotiations with the Government of Nicaragua with the object of securing from said Government a treaty containing stipulations under which the United States would be justified in undertaking this work; it being expressly understood that the Maritime Canal Company shall be entitled to such compensation, not exceeding seven millions of dollars, for work already done, as shall be determined by the President of the United States and the Republics of Nicaragua and Costa Rica, as justly due to it.

INVESTIGATION OF THE FISH COMMISSION.

TESTIMONY

TAKEN BY A

SUBCOMMITTEE OF THE COMMITTEE ON FISHERIES,

UNITED STATES SENATE

IN THE MATTER OF

THE INVESTIGATION OF THE UNITED STATES
FISH COMMISSION.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 21, 1891.—Submitted and ordered to be printed.

MR. STOCKBRIDGE SUBMITTED THE FOLLOWING

TESTIMONY

TAKEN BEFORE THE

SUBCOMMITTEE OF THE COMMITTEE ON FISHERIES

OF THE

UNITED STATES SENATE

IN RELATION TO

THE INVESTIGATION OF THE FISH COMMISSION.

INVESTIGATION OF THE FISH COMMISSION.

TESTIMONY TAKEN BY A SUBCOMMITTEE OF THE COMMITTEE ON FISHERIES, UNITED STATES SENATE, IN THE MATTER OF THE INVESTIGATION OF THE U. S. FISH COMMISSION.

WASHINGTON, D. C., *June 13, 1890.*

The committee met at 10 o'clock a. m.

Present: Senators STOCKBRIDGE (chairman), SQUIRE, and BLODGETT.

The CHAIRMAN. I will read the resolutions under which the committee is authorized to conduct the inquiry we are about to inaugurate:

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's office, and especially in respect of the changes in the force, compensation paid to employés, and any alleged favoritism or other undue administration, and report to the Senate thereon.

Resolved, That the said committee have power to send for persons and papers.

That is the authority of the committee for proceeding.

TESTIMONY OF LOUIS J. LANG.

LOUIS J. LANG, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your full name?—A. Louis J. Lang.

Q. Where is your residence?—A. Brooklyn, N. Y.; that is my place of residence.

Q. You are temporarily here as the representative of the New York Press?—A. Yes, sir, of the New York Press.

Q. Mr. Lang, allow me to call your attention to an article published in the Sunday Press of New York, May 25. You may take the article [handing article to witness.] It is cut from the paper. Just glance your eye over it and tell us whether you have seen it before.—A. I believe I have seen it before.

Q. Did you as correspondent of the paper forward this article to your paper or furnish it to your paper?—A. That was furnished to the Press. I must decline to answer whether it was furnished by me or not.

Q. There are subsequent articles. There is the article of the 26th, headed "McDonald must go—The Press exposé causes a little sensation. Washington, May 25." Will you just glance at that and see if you know anything about its being furnished to the Press?—A. I suppose it must have been furnished to the Press.

Q. Will you state whether you forwarded it?—A. I must decline to answer that question also. The Press published the story.

Q. Here is another Press of June 2, and also various issues of the Press. I suppose your answer will be the same in regard to all of them?—A. Yes, sir. The Press has published the matter and is responsible for the article. The Press has published the different dispatches regarding Mr. McDonald and is responsible for them.

Q. Are you the Washington correspondent of the Press?—A. Yes, I am.

Q. Can you tell the committee who furnished this material for the Press?—A. Well, I should have to violate a confidence if I should tell you that; I do not mean any disrespect to the committee at all, but I should regard it as highly unprofessional to betray my news sources, and I think the Press would regard it so also. But the articles are there, the Press published them, and is responsible for them, I suppose.

Q. Have you any knowledge of these subjects? You have heard the resolution read. The committee is charged to investigate generally the administration of affairs of the Fish Commission. Now, have you any knowledge of your own touching that subject?—A. Only the statements of responsible men which have been made to me.

Q. To you?—A. Yes, sir.

Q. You yourself have no knowledge of it; you have made no investigation personally?—A. It depends upon what you mean by personal investigation.

Q. I understood you to say that you know what you have been told by various parties in whom you have confidence.—A. Certainly.

Q. You have not been to the office of the Fish Commission to investigate yourself?—A. I have not been to the office of the Commission, and whatever I know of the Commission has been gained through statements of men in whom I have every confidence, and whom I regard as responsible for what they said—men who have occupied responsible positions under the Government for years, and whose veracity, so far as I know, has never been called into question.

Q. Do you mean in the Commission, so that they would have a knowledge of the working of the Commission?—A. In the Commission, and in other Departments of the Government dealing with the Commission.

Q. Mr. Lang, we want information upon this subject, and can you give us, without saying who the parties were, or from who you received the information, the names of any parties from whom we could get light upon this subject?—A. I furnished a list of about sixty witnesses to Mr. Olds to be subpoenaed the other day, and I think perhaps they can furnish the testimony you wish.

Q. Would you state if any of your informants are now in the employ of the Fish Commission?—A. Well, now, I am under oath and I could not swear to that statement as to whether they are or not.

By Senator BLODGETT:

Q. You do not know?—A. I do not know positively, so that I would not like to make the statement.

Q. You have given the names of all persons who you believe know anything about this matter?—A. No, I have an additional list.

The CHAIRMAN. Please give the additional list to the clerk.

The WITNESS. I will do so.

(The witness furnished to the clerk of the committee an additional list of names.)

By the CHAIRMAN:

Q. Are the witnesses named in this list people who are in Washington?—A. I think so.

The CHAIRMAN. From whom we may hope to gather information?

The WITNESS. I hope you will, as the Press desires the fullest kind of an investigation in this whole thing.

The CHAIRMAN. I do not know of anything further, but if there is anything in a general way you desire to speak of we will be glad to have you do so.

The WITNESS. I will say in a general way, that these articles speak for themselves, and that I do not know that anything can be added except by the testimony of witnesses.

The CHAIRMAN. We propose to call them.

The WITNESS. The Press is responsible for what it has printed; the articles are there and I can only refer you to them.

By Senator BLODGETT:

Q. Is there any other correspondent of the Press in Washington besides yourself?—A. No, sir.

TESTIMONY OF CHARLES W. SMILEY.

CHARLES W. SMILEY, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your full name?—A. Charles W. Smiley.

Q. Where is your residence?—I am a Government employé. My voting residence is Massachusetts, and my residence in Washington is 943 Massachusetts avenue.

Q. Mr. Smiley, I would simply say that this investigation was asked for by the Commissioner in consequence of a series of articles published in the New York Press, making various charges against the Commissioner and his management of the Commission. This committee is inquiring generally into that subject, and perhaps the better way would be to ask you in your own way to give us any information you have touching this subject. I take it, Mr. Smiley, you have read the various articles, or some of them, which have appeared in the New York Press?—A. I have read one article only in the New York Press, a dispatch from Washington which contained some allegations. That is all that I have seen.

Question. Is that the one of May 25?—Answer. I do not remember the date, but if you can show me the paper I can identify it very quickly.

Q. [Handing the witness the paper.] Maybe that is it?—A. That is the article I saw, the article of May 25.

Q. You can look it over and refresh your memory, and the committee will be glad to have you state whatever knowledge you have of the charges which are therein preferred against the Commission and the Commissioner.—A. Well, sir, it struck me when I read this article that this was more an attack upon the Commissioner than it was upon the general operations of the Commission.

The CHAIRMAN. It is an attack upon his administration of the Commission.

The WITNESS. I have known very little of the Fish Commission since last September, when I left the Commission after a service of eight

years. I left the Commission to assist Mr. Porter in the Census Office. During this time I have found enough to occupy myself there, so that I did not have much opportunity of knowing what was going on in the Fish Commission.

By Senator SQUIRE:

Q. When did you finish your practical knowledge of the business of the Fish Commission?—A. I think my appointment took effect the first day of September.

Q. Last September?—A. Yes, sir.

Q. You were about eight years in the Commission?—A. Yes, sir, about eight years.

By the CHAIRMAN.

Q. What position did you occupy in connection with the Commission?—A. When I went to the Commission in 1881 or 1882—1882, I think—Professor Baird appointed me chief of the Division of Records, and placed in my hands all correspondence, all letters received, and all documents of the Commission. I was the keeper of the archives. Shortly afterwards—a few months—he made me editor of the Fish Commission publications, and placed in my hands the matter of the distribution of publications, and in due time I came in charge of the purchasing and distributing of stationery and such other duties as practically correspond to a chief clerkship. It was never known by that name. It came after a time to be known as the Division of Records and Publications. I remained in that position during all of Professor Baird's administration. During McDonald's administration I was relieved of one responsibility after another, so that at the time I left the Commission to go to the Census Office I was simply librarian and in charge of the stationery. My duties at that time were about one-fourth or one-fifth the responsibility that they had been previously, but Mr. McDonald was kind enough to continue me at the same salary all this time, although relieving me of the larger part of my responsibilities.

By Senator SQUIRE:

Q. What time did the administration of Mr. McDonald commence?—A. I think the date, possibly, of his taking the oath of office was the 18th of February, 1888. Professor Baird died about the 24th of August, 1887.

Q. Who administered it from the time Professor Baird ceased to administer it up to the time the McDonald administration commenced?—A. During the few weeks' interregnum the assistant commissioner was Acting Commissioner, Major Ferguson. President Cleveland appointed G. Brown Goode, Director of the National Museum, to be also Commissioner of Fish and Fisheries. Mr. Goode retained that office down to the time Colonel McDonald was appointed, barring the fact that he took leave of absence for a part of the time, and allowed Dr. J. H. Kidder to be Acting Commissioner in his absence.

Q. When did he commence his active operation which has been continuous up to the present time?—A. He went upon duty immediately, upon the 18th of February, if that was the date.

Q. But he was absent some time?—A. Oh, no; it was Mr. Goode who was absent. He was absent some during that intervening period between the death of Professor Baird—about the 24th of August, 1887—and Mr. McDonald coming into control—the eighteenth of February, 1888. Since that McDonald has been Commissioner continuously.

By the CHAIRMAN:

Q. Will you please tell us if Mr. Commissioner McDonald was in the service of the Commission before his appointment by President Cleveland as the head of the Commission?—A. Oh, yes; Mr. McDonald was an employé in position with myself, being chief of the Division of Distribution of Fishes.

By Senator SQUIRE:

Q. How long did he occupy that position?—A. He was appointed chief of the Division of Distribution of Fishes in 1882, about the same time that I was placed in charge of the Record and Publication Division. We had both been in the census of 1880; McDonald and myself had both served a period in the census of 1880, and as that work closed out Professor Baird selected us to go into the Fish Commission.

Q. Your service was about contemporaneous, then?—A. Yes, sir; very nearly so; so that I have been well acquainted with him, and for some time very intimately acquainted with McDonald during this whole period, and also during the time we were in the census together, ten years ago. I first made his acquaintance just about ten years ago, at the time of the opening of the census of 1880.

Q. Were you in a position to know what the administration of his particular department prior to his becoming chief of the bureau was?—A. Yes, sir; I think so. So far as office contact would be effectual, I was. I never went out into the stations or onto the cars to examine the work that was being done in those places more than once or twice; two or three times. But I knew from Mr. McDonald continually, and sometimes from Professor Baird, what was being done by McDonald.

Q. You staid with him when he was chief from February, 1888, until September, 1889?—A. Yes, sir; I remained with him in the Fish Commission during that period.

Q. Under his management?—A. Yes, sir.

The CHAIRMAN. If there are no further definite questions to ask, will you give us such information as you can touching this general matter into which we are inquiring; into the general management of the affairs of the Commission under Commissioner McDonald, more especially as commented upon in the articles in the New York Press?

A. I shall be happy to do so. I think, however, that justice can not be done to Mr. McDonald by drawing the line at the 18th of February, the time he took the place, for the reason that there was a very large inheritance of things, good, bad, and indifferent, and you can not, in my judgment, understand the value of his administration without taking into consideration some of the previous history and the condition of affairs in the Commission.

The CHAIRMAN. Of course we want to get all the information we can, and still the scope of this inquiry is as to the management of the Fish Commission, the office of the Fish Commission under Mr. McDonald's administration.

Senator SQUIRE. Have you the resolution?

The CHAIRMAN. It is before you. And while it would be very interesting, and I should personally like to know all about the history of the Commission from its inception, still it would open a pretty broad field, and I should suggest that while, as I said, it was valuable and interesting, to please confine yourself to what you consider essential relating to the present Commissioner.

Senator SQUIRE. Does the witness know the purport of the resolution?

The CHAIRMAN (to the witness). Please read the resolution under which we are operating. It will give you an idea of the scope intended by the Senate to be given to the inquiry.

The witness read the resolution.

The CHAIRMAN. After reading that resolution, under the authority of which we act, if you will just state what you desire to state, which in your judgment is proper to come in under that resolution—we have no desire to restrict your statement, only that we have not time to go back to the beginning of this matter—we will be very glad.

The WITNESS. In respect of changes in the force is the first specification in the resolution. There have been considerably many changes in the force. Much that has come to my ears in regard to reasons for changes is, of course, hearsay. I, perhaps, am competent to speak in regard to my own change, and one or two intimately associated with me; but I should not like to speak in general with reference to changes in the force.

By the CHAIRMAN:

Q. Let me just ask you a question right there. You stated a short time ago that after Commissioner McDonald came in, from time to time, you were relieved of certain duties until your remaining duties were those of librarian? Let me ask you this question: Were there new offices created, new appointments made, to take charge of the various matters of which you were relieved, or were they transferred to other existing departments of the office?—A. The work which I did relative to correspondence was taken from me and given to a new officer known as the chief clerk. But the man was an old employé of the Commission, a mere clerk, a stenographer. The work which I did as editor of publications was taken from me and given to a man who at one time had been the editor under Professor Baird. Through dissatisfaction with his work, and his talk about his work, Professor Baird relieved him about 1883 of the editorial work of the Fish Commission and appointed me editor. McDonald returned this editorial work to Dr. Bean and increased his pay.

Q. He was in the service of the Commission?—A. He had been in the service during this time; part of the time devoting his attention to the Commission, and part of the time to the National Museum, as curator of fishes in the National Museum.

Q. Do you say the correspondence was transferred from you to the chief clerk?—A. A new position was created at a salary of \$2,500.

Q. That chief clerk kept the books, the accounts of disbursement, etc.?—A. Oh, no, sir. The Commission has a disbursing officer with several assistants entirely outside of this.

Q. Oh, yes; I did not know. What were the other duties of the chief clerk, besides those transferred to him from your department.—A. Well, very little I think, other than to assist the Commissioner in his correspondence.

Q. The Commissioner attended to a part of this correspondence himself?—A. Yes, sir.

By Senator SQUIRE:

Q. Was there any dissatisfaction expressed as to your work, in either of these branches of your work, by the head of the bureau?—A. No, sir. The Commissioner took pains to tell me that he thought I was overworked; that he thought I had too many responsibilities.

Q. Were you overworked?—A. I made no complaint of overwork.

Q. The inference from your remark is that you were not over-worked.—A. I never complained of overwork in my life, although I have worked twelve and fifteen hours, and considerable of it, too.

Q. Do you work from twelve to fifteen hours now?—A. I do, in the Census Office, voluntarily and with pleasure. I sought the position in the Census Office so that I could work ten or fifteen hours.

Q. What was your salary in the Fish Commission?—A. Two thousand dollars, from the time Professor Baird fixed my salary at that down to the time I left the Fish Commission, and then I went to the Census Office to work at \$6 a day. So that there was not a money inducement for the change.

By the CHAIRMAN:

Q. Pure love of work?—A. I enjoy seeing the fruits of my work, and I can not spend my time, month after month and year after year putting in a fruitless way; and if I am handicapped by a superior officer and prevented from bringing forth fruit I am likely to look where I can produce fruit. That was the fundamental reason for my removing from the Fish Commission to the Census Office.

By Senator SQUIRE:

Q. Because you did not see the fruit?—A. Because I did not have work which I could produce fruits upon. And yet, as I have remarked, at no time did the Commissioner make any complaint or find fault with the work I did, barring one particular time, which I can explain.

The Commissioner spent the summer before last at Wood's Holl. A day or two before he left—

By Senator BLODGET:

Q. You are referring now to Commissioner McDonald?—A. Yes, sir. A day or two before he left he came to my room and reminded me that the Commissioner's report for the year 1887 had not been written. He alluded to the fact that I had written reports for Professor Baird, two or three previous volumes, and asked if I could write a similar report for the 1887 volume. It was the last year of Baird's administration, and not McDonald's.

By the CHAIRMAN:

Q. Before McDonald came in?—A. The last year of Baird's administration had not been written up. He had died and the report had to be written for the last year of his administration. I had written his report for him, prepared the draft and he had examined it, and adopted a very large per cent. of it during previous years. Colonel McDonald asked me to prepare a Commissioner's report for this last year of Professor Baird's administration. That to a certain extent was a hard job to do, because it was to be done in July, August, and the early part of September; but I very cordially expressed my willingness to do so, and immediately set about it.

Before he was ready to return from Wood's Holl I wrote to him that the manuscript was ready for the Printer; that the manuscript could be sent to him to look over at Wood's Holl, or could be sent to the Printer and the proof examined by him. He telegraphed to me to place the manuscript immediately in the hands of the Printer, which I did, and it was put in type, and made about one hundred and twenty-five octavo pages. The previous report of Professor Baird was in one hundred and eighteen printed octavo pages. This was seven pages larger, but was not as much larger as the additional sum of money which had

been expended during that year. When McDonald got back here he found that report in proof ready for him to examine, and he took it with him to Wytheville, where he went to vote in the Presidential election in November. Upon his return he told me that the report would not do at all; that it was too voluminous, and would have to be cut down to about one-half. The report which I prepared was in every respect a counterpart of the preceding reports which had been published in Mr. Baird's name. I pursued the same topics, the same methods of treatment, and it was a report which I am as sure as I am of anything that Mr. Baird would have put his pen to in five minutes if he had been living to sign the report for the last year of his own administration.

Colonel McDonald directed the Government Printing Office to distribute that type, the whole one hundred and twenty-five pages, and he paid them over \$200 for having set the type and distributing it again.

Then he took away from me every trace and vestige of that work and created a new editor, taking very great pains to see that not even a proof of that matter remained in my possession.

After several months the report for that period was published; probably you have it here in your room, the report of 1887. I should like to refer to it in order to corroborate my testimony. It is about sixty-seven pages. A large part of it is the very language which was in my draught, the type of which was all distributed by order of the Commissioner, and then reset in this sixty-seven-page report, if that be the number.

By Senator SQUIRE:

Q. When did that come out?—A. That report was published some time last summer, some eight months later, and the entire volume was not only in print but stereotyped, with the exception of this report, on that day in November when the proof was taken to Wytheville to be looked over.

Q. That was the only case in which he had occasion to find fault with you?—A. The only complaint, that I had made the draught of that report too large. That is the only complaint that Mr. McDonald made in reference to my work from the time he became Commissioner down through these various periods.

By the CHAIRMAN:

Q. Will you state whether, when this work was taken from your hands and put into the hands of the new editor, that was a person who had been employed in the Commission, and was it added to his other duties?—A. It was the man Professor Baird dismissed from the editorial work in 1883.

Q. Is he still in the employ of the Commission?—A. Either in the employ of the Commission or the Museum.

Senator SQUIRE. The point that I understand you to try to draw out, Mr. Chairman, is as to whether this man who was appointed to succeed Mr. Smiley was a new man or whether it was a mere transfer of work from Mr. Smiley to some other man who was in the Commission.

The WITNESS. It was a man who had been connected with the Commission right along.

By Senator BLODGETT:

Q. He had formerly done the same work?—A. At one time.

By Senator SQUIRE:

Q. In 1883?—A. Part of the same work. Professor Baird did part

himself and this man did the other part. Professor Baird never allowed anybody to write a report for him until I got into the way of doing it. He was able in the earlier years to do all himself, to gather the facts and to get the whole thing together. Doctor Bean never did any of that work at all.

Q. Was this man's salary increased when this transfer took place?—

A. Shortly afterwards. It has since been increased.

Q. What was it before and what was it after?—A. He is reported in this newspaper article at \$2,100, which I think is correct.

Q. You mean now?—A. Yes, sir.

Q. What was it before?—A. Oh, it was \$1,800 for several years. I think previous to that \$1,500. You know I can not give you the minute details as to the salary of each man and the changes in salaries.

Q. Would you like to have the committee understand, as a matter of plain fact, that there was an unnecessary expense created by reason of the appointment of other men to do work which you had been doing, which you could well do, just as well as you had done before?—A. Yes, sir; I would be very glad to have the committee understand that as an expression of my judgment.

By the CHAIRMAN:

Q. Let me ask you this question. Would the sum of the increase of the salaries of the men, if there were more than one—I take it there was—to whom your duties were practically transferred, be more than the salary which you drew, so that in total the expense would be increased?—

A. Perhaps the fractional additions which you allude to would not; but the additional clerks appointed and brought into office to help push these people with their work would a great deal more than offset my salary.

By Senator SQUIRE:

Q. You were paid the same salary as when you did all the work?—

A. Yes, sir; for doing a fraction of the work.

Q. How many more men would you say there were to do the work you had done?—A. Well, the work which I did of course I did with a corps of assistants. I had six assistants at the time Mr. McDonald came into office, and when I left the Commission I had three. One of those whom I had at first, and whom I did not have afterwards, a man who was incompetent to assist in this editorial work, proof-reading, etc., and whom I had not dared to allow responsibility in that line, was transferred out from under me and put under this Dr. Bean, who was created editor as my successor and given this line of work to do, which I had not dared to let the fellow do. This man, Mr. Charles W. Scudder, appears to do considerable of the editorial work under Dr. Bean.

Senator SQUIRE. I suppose what the committee wishes to get at is, if it were an unnecessary increase, what it amounted to.

By Senator BLODGETT:

Q. I will ask the witness if he was familiar with the expense of the office the last year of Professor Baird's administration, the expenses of the pay-roll, put it in that shape, for office work the last year of Professor Baird's administration?—A. I was somewhat familiar with that.

Q. Could you give us that amount?—A. No, I can not give you the amount, but the number of persons has increased considerably. There is a considerable increase.

Q. Now give us the amount for the next year?—A. There is a considerable increase in the amount of money paid for office work.

Senator SQUIRE. I was trying to get at the particular work he did, not the whole of it.

Senator BLODGETT. You understand, Senator, in transferring duties, there may be a time when, perhaps, the expense may seem to be a little larger. I can understand how that would be. Charges of extravagance have been made here. Taking the year through, comparing the last year of Professor Baird's administration with the first year of Mr. McDonald's administration would show whether there have been extravagancies under him.

The CHAIRMAN. If the witness does not know the total under Mr. Baird's administration, the committee can find that out from the books of the Commission.

Senator SQUIRE. In regard to this particular branch of the business that this witness was conversant with, actively and personally, of course he might be competent to enlighten the committee about that part of it. That seems to be the point we have been talking about. I was trying to boil it down, to try to get it into dollars and cents.

Senator BLODGETT. So far as he was personally concerned.

The WITNESS. By taking a little time to prepare myself on that point perhaps I could give you something definite. Of course off-hand it is not easy for a man to give a mathematical computation. My impression is that the work cost at least a third more after the transfer than before.

By the CHAIRMAN:

Q. You say that when you had all these duties to discharge and the responsibilities which you speak of you had six employés under you; after that you were relieved of several branches of the work, and up to the time you were removed you had three? Did I so understand you?—A. There were three at the time I left; I was not removed.

Q. I understand you resigned. I would like to ask this question. I think you have stated that up to the time of your leaving the office you did not complain of overwork, and rather gave us to understand that the work after these various things were taken from your supervision was pretty light. Was that the idea?—A. The responsibilities were very light; very light indeed.

Q. The occupation, the work, as you may call it?—A. The work. That would be true of the work that was required of me. As a matter of fact I tried to make myself useful——

The CHAIRMAN. Of course.

The WITNESS. And proposed one or two things, not very important, which the Commissioner allowed me to go ahead and do and occupy my attention with.

By the CHAIRMAN:

Q. You say you had three employés under you. Were they more than it was necessary to have; could you have gotten along with less, probably?—A. I could by dropping one or two lines of work that I did pursue. I pursued the lines of work, and kept the people as busy as I considered the generality of employés in the building were kept busy, which was about two thirds what they used to do under Professor Baird's administration.

Q. Did you at any time recommend or suggest to Commissioner McDonald that he could reduce expenses by dispensing with one or any of the three employés under you?—A. No, sir; I did not. I sought to employ them profitably as long as he chose to leave them with me.

Q. In the former part of your examination you said the work was very light after the various transfers were made, and you wanted to get where you could make yourself useful and produce better results. I merely wanted to know whether you suggested to the Commissioner that expenses might be reduced by discharging any of these employés?—A. No; I took the other tack of trying to occupy them as profitably as I could, and I proposed one line of work which I can cite and with which I occupied them.

I undertook to ascertain precisely which of about 25 volumes that the Commission has published, first and last, were contained in every public library in the United States, in order that that information might be published and sent to the people who make applications for reports, and who can not be supplied. The information should be sent to them, showing just what public libraries they would find those identical volumes in, and I occupied a considerable portion of my leisure time the last three or four months in corresponding with these libraries and gathering together that information and tabulating it.

By Senator SQUIRE:

Q. You suggested that idea?—A. I proposed it and the Commissioner approved of my carrying it out.

Q. You did this in order to make employment for these clerks?—A. Because I thought it was a very useful thing to be done, and would afford work for these employés. I did it because I thought it ought to be done. I had had charge of the distribution of documents for years, and our stock was reduced so low that nineteen out of every twenty applications had to be refused. In refusing a man's application for a Fish Commission Report, it struck me that the nice thing to do was to tell him just where he could consult that report. If he was living in New York City, I proposed to send him a list of fifteen libraries, in any of which he could see that report. If he lived in Albany, I could send him a list of three libraries. If he lived in San Francisco, I could refer him to about five libraries where he could see these reports. My proposition was that these lists should be published, so that in refusing reports we could simply inclose this list.

Q. Is it the custom of the bureau to furnish at least one public library in every State and Territory?—A. The distribution of reports up to that time had been unsystematic as to libraries, and part of my scheme, which I have thus far described, was to supply the gaps in these libraries. I recommended to the Commissioner the forwarding of volumes to supply gaps to the amount of at least 5,000 volumes, which were sent out from the Fish Commission stock to fill the gaps in these libraries, as I found they had gaps. So that I undertake to say to-day the public libraries of the United States, important libraries of the United States, have a much larger percentage of completed, or very nearly completed, sets of Fish Commission reports than any other Government reports.

Q. Take the libraries of the far West, have they been forwarded the reports?—A. I took up every library in the whole United States that had 500 or more volumes in it, and I asked them what they had of our books, and what they lacked, and so far as they reported their lacks to me I recommended to the Commissioner to supply the gaps, and he approved of my recommendation in every case.

You ask me about the newspaper article. There are some things in it that I never heard or dreamed of.

Senator BLODGETT. Foreign to this investigation?

The WITNESS (reading).

He—

Referring to Mr. McDonald—

found in office 99 employés. The great majority of them were experienced in the duties involving upon them. Within a very few months many of them were discharged, presumably on account of their politics. Democrats unacquainted with the duties of the office were installed in their places.

So faithful has McDonald been in his devotion to the Democracy that he has found lucrative positions for no less than 164 of his friends. Although Professor Baird ran the Commission with less than 100, McDonald finds it difficult to make it half as effective with 211.

Now, I think that Baird did run it with about 99 employés. I think that to be the case. I should say that there were nearly 200 now.

By Senator BLODGETT:

Q. You are speaking now of the last year of Professor Baird's administration?—A. Yes, sir.

Q. What has been the ratio of increase from year to year of employés, would you say. I suppose it was considerably less ten years ago?—A. Baird never increased ten per year.

Q. Ten per cent.?—A. Baird never made an increase of more than ten persons per year. That is my recollection. This intimation that McDonald has worked this thing in the interest of Democracy is in my judgment all nonsense.

The CHAIRMAN. I agree with you as to that.

The WITNESS. McDonald is a Democrat, as he was a Confederate during the war, and fought like a tiger for four years on that side, and he is very fond of referring to his war history. But the Fish Commission has never been under political control. Baird never allowed politics to be considered at all, and when Baird died I suppose there were practically as many Democrats as Republicans, or, to put it in a stronger light, I never knew what the politics of two-thirds of the employés under Professor Baird's administration was.

By the CHAIRMAN:

Q. Let me ask you this question right here. Have you any reason to believe that the management in that regard has been different under Commissioner McDonald?—A. There has been a slight difference, but only slight. Baird was a strong man. McDonald is a weak man. McDonald yields to solicitation and importunity, as Baird never did. Solicitation and importunity have come upon McDonald, being appointed by a Democratic President from that quarter, and without McDonald really intending to increase the Democratic contingent he has yielded to solicitation, and the result probably is that more Democrats than Republicans have come in under McDonald; but not with the distinct purpose on McDonald's part of making it a Democratic organization.

The CHAIRMAN. I think that is the fact.

By Senator SQUIRE:

Q. What is the fact, so far as you know, in regard to accessions to the force since McDonald came in; has there been any test as to a man being a Democrat or Republican; has any point of that sort been raised?—A. Not usually. I understand that my office of librarian has just been filled with a political selection.

Q. Since the present administration came in?—A. Within two or three weeks.

Q. A Democrat appointed?—A. He is said to be a Republican, but it is purely a political appointment.

Q. It is said to be?—A. Said to be; I do not know anything about it myself.

By the CHAIRMAN:

Q. Do you know the party?—A. No, sir.

By Senator BLODGETT:

Q. What do you call a political appointment?—A. I call a political appointment one made upon the testimony of members of Congress or Senators that the man is competent and suitable for the place and that they desire him to have the place.

By Senator SQUIRE:

Q. As a matter of political patronage?

By the CHAIRMAN:

Q. Because he is competent or because he is a partisan?—A. They never say that in their letters.

By Senator SQUIRE:

Q. Do they not say he is a good Republican or a good Democrat in their letters sometimes?—A. The Senators and members are pretty careful not to say, but the collateral letters which come up from the back counties usually specify, so that the Senator or Representative does not need to allude to that.

By Senator BLODGETT:

Q. Suppose two Republican Senators should come here and ask for the appointment of a man, would you regard that as a political appointment? We suppose every man has some politics, you know.—A. Where a Government official, a commissioner, makes an appointment without investigating the case—without investigating the qualifications of the applicant himself, but makes the appointment on a recommendation coming from this building, trusting to gentlemen here who have made the recommendation and the request—I call that a political appointment.

Q. How, then, can appointments be made except upon the recommendation of men? It is not supposed that the Commissioner knows every man whom he appoints, and he must take the word of men, should he not, as to the qualifications of the appointee? Now he takes the word of a member of Congress, for instance, of one side or of both sides; does it necessarily follow that it is a political appointment?—A. It follows that it is a political appointment, according to my definition of political appointments. You may have some other definition.

Senator BLODGETT. I have recommended men as being good men and suitable for the position under Republican administration; I am doing it very frequently. I know them to be good and competent men, and say so. I do not ask the administration to appoint them because they are Democrats or Republicans; and I know that a great many Republicans indorsed men who were applicants to office under Mr. Cleveland's administration.

Senator SQUIRE. There are certain offices, Mr. Senator, that it is expected that the word of a Democratic member of Congress or Senator in commendation of a man is valuable, because that relieves it to

some extent from a partisan character, where both sides are represented. Then again there are cases where it is expected by a Republican administration that a Democrat will be appointed.

Senator BLODGETT. Going beyond that, when we come to speak of the fitness of a man, I understand they have got to have the indorsement of men who know all about it. I understand that to be the case, and I should think it would be a wise thing for the Fish Commissioner to have the indorsement of such men, without regard to their politics.

By Senator BLODGETT:

Q. A man was appointed as a Republican to take your place?—A. Within two or three weeks.

Q. Suppose he was recommended by Republicans, or Republicans exclusively, would that be an objection to his appointment, if he is a valuable man.—A. I do not object to political appointments myself. I have from 75 to 100 employés in the Census Office under my direction, and almost without exception they are political appointees, according to my definition of political appointments. Now, whenever a clerk comes there who is not satisfactory to me I dispense with him just as quickly—

Q. I recommended a young lady for appointment there, and she was appointed. Somebody might charge Mr. Porter with appointing a Democrat on a Democratic recommendation?—A. If you will go down there you will find we have got her charged to your State.

By the CHAIRMAN:

Q. You have not got her charged as to whether she is a Democrat or Republican. I will ask you whether in the dismissals and appointments which have been made by Mr. McDonald, to your own knowledge or in your belief, such appointments and dismissals have been made on political grounds?—A. I do not think they have.

The CHAIRMAN. That covers the ground.

Senator BLODGETT. That covers it all.

By Senator SQUIRE:

Q. Now as regards this alleged favoritism. The resolution reads:

Especially in respect of changes in the force, compensation paid to employés, and any alleged favoritism or other undue administration.

A. A large number of changes have taken place down there, not being due to politics, must be explained. I explain that in the personal character of the Commissioner. He is a man of very nervous temperament. He was prostrated in sickness at the time he was appointed and confirmed Commissioner. He has, in my judgment, been in that continued state of nervous prostration during these two years, and it has unfitted him for the duties of the office. With good motives and a poor body the colonel has done unwise things. He has made unwise changes in the force of employés. He has allowed the force that he had to loaf to an extent which is utterly unjustifiable, and has put in more people to help do the work. He has, while supposing and believing that he was a magnificent disciplinarian and scolding people roundly, and all that sort of thing, allowed them to run away with him and do as they pleased. They come strolling in anywhere from a quarter after nine, half past nine, quarter to ten, ten o'clock to half-past. They put on their hats and go out at noon and stay a half hour, three-quarters of an hour or more, without leave or license. They leave their desks and are away from the building before four o'clock. I

found it utterly impossible to maintain the discipline which I had been accustomed to maintain under Baird and which I maintain in the Census Office, under McDonald as Commissioner in the Fish Commission.

Since I have been in the Census Office I have had occasion to send Census Office clerks to the Fish Commission building to work on public records. Those clerks invariably come back and remark to me about the laziness and looseness of affairs in the Fish Commission; about the clerks reading papers there, their not attending to their work; and even twitting them, Census Office clerks, about working hard from 9 until 4, and telling them that they do not do that way in the Fish Commission, and commiserating them, pitying them, that they have to work under Mr. Smiley from 9 until 4, with a half hour's intermission for lunch. If they knew that sometimes I bring them down to the Census Office in the evening at 7 o'clock and work them till 11 additionally, I think the pity would know no bounds.

By Senator SQUIRE:

Q. Now, in regard to favoritism?—A. Owing to this condition of the Commissioner's health and mind he forms prejudices rapidly. He either thinks a good deal of an employé he has got there or he thinks very little. It is one extreme or the other, and his conduct is so outspoken, he acts out in actions so, that the employés all understand immediately what McDonald thinks of them. If they are in favor with him they pursue an amount of personal liberty which we do not tolerate in the Census Office, and if they are not in favor with him they lose interest in their work. There is a gross and deplorable lack of *esprit de corps*. There is very little *esprit de corps* there. There are very few people there who take an interest in their work. They go there and stick as near the hours as they think they must, and they draw their salaries regularly, but they take very little interest in their work. They talk a good deal about the things that they like and the things they do not like, some complaining about the commissioner and complaining about this and that and they struggle with the other to see which shall have the easiest time. The thing goes on in that sort of a way. Of course, these remarks apply to the period I was there.

By the CHAIRMAN:

Q. I was going to ask you how you were so familiar with it, not being there?—A. Except where specified, what I have said applies to the period I was there.

By Senator BLODGETT:

Q. Are the chiefs of divisions in the Fish Commission responsible for the good conduct of employés?—A. Presumably they are, but chiefs of divisions themselves are absent when they should be on duty, and so of course they do not know what the clerks are doing.

Q. During the time you were there were you always on duty?—A. Oh, no, sir; I was not always on duty either.

By the CHAIRMAN:

Q. Some of your clerks might have gone off before 4 o'clock without your knowing it?—A. Yes, sir.

By Senator BLODGETT:

Q. The general responsibility was really with you and not with Colonel McDonald?—A. I conformed my division as nearly as practicable to the general custom of the office, and if the chief clerk and the

clerks in his office went off at 3 o'clock I did not raise any objection to the clerks in my office going off at 3 o'clock.

By the CHAIRMAN:

Q. So that the chiefs of divisions rather followed each other?—A. Somewhat followed the example set by this chief clerk.

Q. The Commissioner is responsible for them?—A. Of course the Commissioner is responsible for all this state of affairs.

Q. He is the head man?—A. The Commissioner never called upon me at any time to know whether they worked the full hours, or any thing of the kind. If he had called on me and asked about it I would have told him——

By Senator BLODGETT:

Q. And an intimation from him to any of the chiefs would have removed the difficulty?—A. If it was given in the right way.

By the CHAIRMAN:

Q. If you had said to the Commissioner, "My clerks are not very prompt," might he then have directed you to reprimand them for their tardiness and lack of attention?—A. He could answer that question better than I. I looked out to keep them within such limits that they would not be ringleaders. I never allowed them to be ringleaders in this demoralized state of affairs.

Q. They sort of drifted with the others?—A. Yes, sir; I allowed things in many ways to drift along the last year I was there that I never would have done before. For instance, I gave out a considerably larger amount of stationery the last year I was there per capita than I had given out in any previous year.

Q. Why was that?—A. Because the requisitions came down to me from the chief clerk's office bearing the stamped autograph, "M. McDonald." The Commissioner never saw them at all, but somebody in the chief clerk's office stamped this rubber-stamp, "M. McDonald," on, and they came to me. I found, on calling the attention of the Commissioner once or twice to the stationery question, that he did not wish me to raise any question in regard to the extravagant use of stationery, and so I desisted and filled the requisitions without question.

By Senator BLODGETT:

Q. The use of the stamp was authorized by the Commissioner.—A. Yes, sir; and in common use, the same stamp on which money was disbursed.

By Senator SQUIRE:

Q. You called the attention of the Commissioner to this?—A. Yes, sir; I called the attention of Colonel McDonald, both verbally and in writing, to what I considered the too bountiful use of stationery.

Q. Did you ever call his attention to any other irregularities there?—A. I think very likely I did. I have always been very outspoken in such matters, and yet I do not at this moment recall any instances.

By the CHAIRMAN:

Q. Are there any other points in the article which you have before you upon which you would like to comment, or upon which you will comment, in order to give us light on the subject?—A. I suppose we have finished the question of changes in the force, my testimony being that it is not Democratic influence, but to a considerable extent an unwise change of force due to the weakness of the Commissioner, yield-

ing to the pressure of this man and that man to have his friends given places and having work re-arranged to please.

Q. Not being especially political?—A. No, sir.

By Senator BLODGETT:

Q. Do you mean to convey the impression that stationery was squandered; that it was stolen, or that it did not go the proper use; you say a large amount of it was used, more than previously?—A. I could not know its final disposition. A requisition would come to me to furnish such a division, or such a car, or such a vessel a certain amount of stationery, and I delivered it to these various destinations. What became of it thereafter I have no means of knowing. But the requisitions being larger than they had been under Baird's administration I felt called upon to direct the colonel's attention to it; and the colonel intimated to me that he thought there had been too much penuriousness about the stationery question, and he wanted I should issue without comment the stationery which was properly asked for, namely, which had this rubber stamp on.

Q. It was department stationery, with the heading on the paper and envelopes, etc.?—A. All kinds of stationery; every conceivable thing that is used about clerical work.

I do not want this committee to understand that this was a large matter. It was a comparatively trivial matter, and it was confined perhaps to a few hundred dollars' worth of stationery, but this has come out in answer to the question of the Senator as to whether I had at any time directed the attention of the Commissioner to supposed matters of abuse.

By the CHAIRMAN:

Q. Let me ask you a question touching this. I do not consider it very important, but still I will ask it. There have been, as I understand it, and as I know, new hatching stations established and an increase in the force, in the business of the office, and would not that of course lead to an increased demand and use of stationery?—A. Naturally, but only to a certain extent. That of course would be considered. I never raised any objection, of course, to giving out stationery for a new station.

Q. But the fact that there was a new station established would call for more stationery than if it had not been established, would it not?—A. Yes, it would call for more stationery in the grand total, and it would tend to some extent to explain the increased expenditure.

By Senator SQUIRE:

Q. What kind of stationery, general stationery, all sorts of office things?—A. Yes, sir; paper, envelopes, pens, inks, blotters.

By the CHAIRMAN:

Q. Pen racks?—A. Yes, sir; everything, all sorts of things that are used about office work.

Senator SQUIRE. You started a few moments ago to look the article over.

The WITNESS (reading):

A few weeks ago Frank Blaisdell, a draughtsman, incurred McDonald's displeasure. Blaisdell is a member of the Loyal Legion, and his father was General Blaisdell, the Massachusetts hero, who was killed at Petersburg. Blaisdell's salary was \$150 per month, and McDonald reduced it to \$100, and presented the extra \$50 to S. G. Worth, one of his favorites.

I believe those statements to be true. Of course you will call Mr. Blaisdell here and hear from him about it.

By the CHAIRMAN:

Q. He is a Massachusetts man?—A. He is a Massachusetts man.

The WITNESS (reading):

Those outside of McDonald's ring, who have enjoyed these little excursions, have frequently asked how he could afford such lavish entertainments. The reply invariably has been, "Oh, the Government pays for it; Mac.'s his own boss." Welcome guests on these trips, and especially at the feasts held at the Washington station, have been Senator Arthur P. Gorman, Eugene Higgins, and many Southern Democratic leaders.

I have a clerk in the Census Office, Mr. Z. Vance Harris, of North Carolina, who has been one of the workmen at Fort Washington station. Mr. Harris has told me that he has seen an unwarranted amount of intemperance at that station.

Q. Do you know how many men there are at that station?—A. It is only a temporary station. It starts usually in April. It is simply during the shad season.

Q. How many do you suppose?—A. Well, a half a dozen is enough to run the station.

McDonald, however, hit upon a plan for selling fish, oysters, and clams, and applying the proceeds to buying beverages.

I know that it has been a practice at that station for a number of years to haul Government seine and catch shad for the purpose of taking eggs. The shad so caught have for some years, and I suppose down to the present time, been sold, by the direction of the Commissioner, in the Washington market, and I do not think that the proceeds of the sale of those shad, collected with the Government seine, have ever been turned into the Treasury. That is a very easy matter for you to test. I have always understood that there was certain use made of that money. The words "oysters and clams" ought not to be there. I do not think McDonald has ever sold oysters and clams. It is only the fish, and it is only the shad which are sold. Under Professor Baird's administration it was arranged that that money, gotten from the sale of shad, should be used somewhat like the slush fund in the Navy—to buy things with that could not be gotten through the Treasury Department on Government account.

Q. That was the custom under Commissioner Baird?—A. Yes, sir; under Commissioner Baird, and it has presumably been perpetuated under McDonald.

By Senator SQUIRE:

Q. Has there been any change; has a greater amount of fish been taken; is the amount realized greater now than under Professor Baird's administration?—A. It is about the same.

By the CHAIRMAN:

Q. It is not a large amount any way?—A. Professor Baird never allowed that fish fund to be used for whisky or drinks. It is charged here—a matter that I know nothing about—that that fund was used for buying beverages.

By Senator SQUIRE:

Q. What was it used for under Professor Baird's administration?—A. Well, Mr. Baird just liked to have the Senators and members taken

down there to see what was going on, what was being done. Of course there was some expense——

Q. For entertaining?—A. In connection with these trips, but they never included drinks.

By Senator BLODGETT:

Q. Lemonade, I suppose?—A. I never went on one of the trips myself, and I do not know. I have heard Mr. Baird and others talk about it, and I have heard Mr. Baird instruct his superintendent. Baird never had an intemperate man in charge of the Fort Washington station.

By the CHAIRMAN:

Q. Nor anywhere?—A. Not if he knew it. But Mr. McDonald has had Mr. S. G. Worth in charge of that station each year. Mr. Worth is a pretty efficient kind of man, is an efficient propagator. Mr. Worth is one of the more capable men in the propagation force of the Fish Commission, but he has the unfortunate habit of drinking. He drinks considerable at times. He did in North Carolina before he left the State commission there. I have been told that he was dismissed from the North Carolina commission, and the commission broken up on that account. Mr. J. F. Oertell, who was employed there with Worth and knows the circumstances, gave me that information.

Q. Have you any reason to believe that the intemperance of this man, who is in charge there, is apt to interfere with the proper discharge of his duties?—A. Well, Senator, I am inclined to believe on general principles that intemperate habits always interfere with the efficiency of a man, but not in an especially striking manner as in the case of Mr. Worth.

The CHAIRMAN. I was down there once. I liked his appearance.

The WITNESS. For instance, I should not allow anybody to call Mr. Worth a drunkard in my presence, or anything of that sort. Mr. Worth is straight a large part of the time. Whenever I have seen him under the influence of liquor it has been down on that station or off on some vessel or at some place that was semi-social and semi-business.

By Senator BLODGETT:

Q. So far as these charges go, then, you have no personal knowledge of their truth?

The WITNESS. Which ones?

Senator BLODGETT. The charge that money has been applied for beverages. Is not that the way it reads?

A. I do not know anything about the converting of money into beverages of my own knowledge. I do not know what they converted it into.

By the CHAIRMAN:

Q. Do you know whether it has been turned into the Treasury or credited on the books of the Commission?—A. I suggested that the Treasury accounts would show.

By Senator SQUIRE:

Q. I understood you to say awhile ago that it had not been the custom at any time.—A. That has been my understanding.

Q. At any time, that it had not been accounted for?—A. I never knew that it was accounted for to the Treasury, and I have known that it was not accounted for.

By Senator BLODGETT:

Q. Under Mr. Baird it was used for petty cash about the office?—A. Petty cash about this station to meet expenses, for the entertainment of people who had some right to know. Senators and members have a right to know what is going on at Fort Washington. It is no very serious thing to give them a little something to eat if you keep them down there any time.

By Senator SQUIRE:

Q. How much would you say the sum received from the sale of fish would amount to in a year?

The WITNESS. How much they get for the fish in the course of a year?

Senator SQUIRE. Yes, sir.

A. They could not get more than \$75 to \$100.

Q. In a year?—A. I do not think they could, I do not care to say anything more about this article.

By the CHAIRMAN:

Q. You have touched upon almost all the points, have you not?—A. This is not the kind of an article that I should want to write if I were going to expose what I consider to be the weaknesses of the Fish Commission.

Now if you were going to interrogate me about the weaknesses of the Fish Commission and go into the general subject of what it has done, and what it has not done, and what it ought to do, I should cut entirely loose of anything of this sort. But you have confined me. That would take in some broad general principles as to what the Commission ought to do and what it has done.

The CHAIRMAN. Of course that is very interesting, but it would hardly come under the purview of this resolution. The whole subject is exceedingly interesting, and if it were not for making the examination too long and the report too voluminous, we would be very glad to hear it.

The WITNESS. It would be entirely possible, of course, if some hot-headed and not very able man has written an attack of this sort upon the Fish Commission and your committee investigate this and report that there is nothing in it—of course, it is very easy for the inference to be drawn, an unjust inference to be drawn, that you approve the general management and conduct of the Commission.

The CHAIRMAN. That would not be the inference, for we were not directed to inquire as to that.

The WITNESS. During the past two years of McDonald's administration and a number of years previous under Baird, extremely little has been known by Senators and members of Congress who have voted the money, as to the manner in which the Fish Commission was managed. I can scarcely imagine so little attention paid to any branch of Government affairs in Washington. That grew out of the unbounded confidence which everybody had in Baird.

The CHAIRMAN. I think that is true.

The WITNESS. So that down to the present moment the gentlemen connected with the fishery committees in the upper and lower house both seemed to have allowed the present Commissioner to inherit the unbounded confidence they had in Baird. Therefore extremely little is known here about the manner in which money has been expended, about the results, or professed results, obtained from the expenditure of this money, amounting to more than \$2,000,000 all told.

By Senator SQUIRE :

Q. Since the inception of the Fish Commission?—A. Yes, sir. The Commissioner is not under the direction of any cabinet officer, and, therefore, has never had anybody to consider this question, or to know what he was doing.

By the CHAIRMAN :

Q. He only reports to Congress?—A. And he, practically, only approaches the appropriations committees.

The CHAIRMAN. I say he only reports to Congress.

The WITNESS. Oh, he reports to Congress directly, and Congress, in pursuance of that unbounded confidence that it had in Baird, has appropriated lump sums of money for this Commissioner, who is responsible to no one but Congress, to spend as he pleases.

By the CHAIRMAN :

Q. You know the estimates, say so much for this work and so much for that?—A. An estimate of \$130,000 for the propagation of food-fishes, and the committee never inquires how that is to be distributed. Now, I think that this committee will be well satisfied if it made the inquiry into the affair; that that appropriation ought not to be made in a lump sum of \$130,000, to be disbursed in the discretion of one man only, and that it ought to be divided; and say so much for salaries, such and such a class, which would prevent the appointing of a large number of people at high salaries to do very medium sort of work.

Q. The Geological Survey is the same?—A. That would be the same as other departments.

Q. The Geological Survey appropriation is made in a lump sum, put into the hands of Major Powell, and he does as he pleases with it?—A. And the survey has been in hot water for the last three years on that account. Now, if this committee takes an interest in having a Fish Commission, which shall be of actual benefit to the United States, to the full extent of the money given it to disburse, I should be very glad indeed if the committee would inform itself fully about the work that the Commission does and satisfy itself what is done, and stand ready to advise the Commissioner in regard to matters with reference to which you could give this advice.

Q. Is there any thing further you wish to say in regard to this article?—A. No, sir. There was an article published in the Baltimore American the other day. They had an article which is enormously more worthy of your attention than this. This is venomous in certain particulars.

Q. Do you know the date?—A. The first of the week; Monday, probably.

TESTIMONY OF STEPHEN C. BROWN.

STEPHEN C. BROWN, being duly sworn and examined, testified as follows:

By the CHAIRMAN :

Q. What is your full name?—A. Stephen C. Brown.

Q. Your residence?—A. Washington.

Q. Have you at any time been connected with the United States Fish Commission?—A. I was at one time, under Professor Baird.

Q. Do you remember the years?—A. I worked indirectly with the Commission for eleven years, for nine years under Professor Baird.

Q. What was the character of your work?—A. Professor Baird, as you know, was secretary of the Smithsonian, the National Museum, and Commissioner of Fisheries. My work was then, as it is now, connected with the three Departments; in the Fish Commission itself connected more directly with transportation, shipments, and receipts. That was what I had principally to do at that time.

Q. How long since your connection with the work in the Fish Commission has ceased? How recently have you been employed in any way there?—A. I ceased through the death of Professor Baird.

Q. Did you read an article published May 25, which you have before you there, in the New York Press, which makes various statements in regard to the administration of the Fish Commission?—A. Yes, sir; I have seen it.

Q. Have you any knowledge of any of the statements or charges therein made?

The WITNESS. In what particular?

The CHAIRMAN. Take them as you please; there are lots of them. If you know anything as to any of these charges just state it in your own way and as briefly as is consistent.

A. Just before Professor Baird died he wrote a letter to President Cleveland naming Maj. T. F. Furguson as his successor. I believe that to be true. I have been told so by Major Furguson himself. That is a matter of record; the letter has been printed and copied. But of course it is unnecessary to enter into that. That was put in, I suppose, probably, to offset a counter-statement on the other side that this man was Professor Baird's choice.

Of the charges presented in the Senate I know nothing.

While there is a great deal of truth in that list, it is not accurate. In some cases salaries are too high and others too little. I only state what I know according to the Blue Book.

The CHAIRMAN. I know the statement is incorrect as to salaries.

The WITNESS. And it does not include all the relatives.

By the CHAIRMAN:

Q. What knowledge have you of Commissioner McDonald appointing relatives in the Commission?—A. Nothing, only what is published in the Blue Book.

Q. It is not stated in the Blue Book that they are relatives of his?—A. No, sir.

Q. Do you know that any of the employés appointed by Commissioner McDonald are relatives?—A. I have always understood that Francis McCormick is a nephew of Mrs. McDonald. The two Lewises I have been told married a brother and sister of Mrs. McDonald, but I could not state positively, because I do not know. Mr. Blaisdell knows that, and can tell you just how it is. I may be a little mixed, and I do not want to be.

Q. They were appointed by Mr. McDonald?—A. Yes, sir.

Q. One of the points made in that article is that appointments have been made with a view to political matters, that Commissioner McDonald had made appointments hinging upon politics; what do you know about that?—A. I can not say that I know anything of that beyond the States from which they appear to come. Of course I am not supposed to know the motives that actuate the doings of any man.

Q. As to new appointees, do you know anything about their politics, and have you any reason to believe they were appointed simply because they were Democrats or Republicans?—A. I think a great many of

those appointed recently have been from his own and other States in that locality, Virginia and Maryland.

Q. As Democrats?—A. Of course I have never asked any of them what their politics was.

Q. Well, what do you suppose was their politics?—A. I could not state positively as to whether they were Democrats or Republicans.

Q. There are various other charges in the article you have read. Is there anything in regard to any of these charges which you have knowledge of and can inform the committee? We want light on this question.—A. His record here I think was pretty thoroughly discussed at the time of his confirmation. Of course I was not there.

Q. Can you give us any information upon any of the charges which are made in that article?—A. I do not see much in here, but, as I said, the question of his record has already been brought out. The statement that he burned the bridge at Berlin when an attaché of the Corps of Engineers, in order to prevent the passage of the Union Army into Virginia, I believe to be true.

The CHAIRMAN. We do not want to go into that. We have agreed to bury all those things. [Laughter.] As to anything relating to the administration of the office is what we care about.

The WITNESS. I do not see much in here.

By Senator SQUIRE:

Q. Can you give us any information as to favoritism shown employés?—A. Favoritism? Have you a copy of the rolls? You take now, for instance, this man Mr. Worth; he was employed under Professor Baird in 1887 at \$60 a month. We find him in April, 1890, drawing \$1,800 a year.

By the CHAIRMAN:

Q. What position does he occupy?—A. Superintendent of the central station.

Q. Of the station down here?—A. Yes, sir.

Q. What position did he occupy under Professor Baird?—A. He was engaged in the shad propogation at the station. He used to be down in North Carolina.

Q. He has been with the Commission quite a number of years?—A. He has been with the Commission—I would not attempt to state the time. He was on the Commission in North Carolina. He afterwards appears in North Carolina as superintendent of fisheries under the department of agriculture of that State. I think he had been on the United States Fish Commission for about two years. The man who was superintendent under Professor Baird happened to be a namesake, but no relation, and came from New York State. The colonel's first words to me—one of his first words—going out of the north door, was, "I am glad I am now in a position where I can do something for some of my friends. I can do something for Brown." What has he done? Brown's salary is \$100, as it was under Professor Baird. One of the first things he did was to bring on a man by the name of William P. Seal, of Philadelphia, and put him in charge. At the close of the season he appointed Mr. Worth as superintendent, and that has gone on until his salary is \$1,800. He has received the largest increase of any employé in the Commission, \$1,080 in less than two years. His chief clerk, J. J. O'Conner, received \$115 a month under Professor Baird.

Q. In what capacity?—A. Chief clerk. He is there to-day receiving \$2,400.

Q. He was in the Commission under Commissioner Baird?—A. Yes, sir.

Q. And has been there many years?—A. He has been there seven or eight years; perhaps more.

Q. And is now advanced to the chief clerkship?—A. Yes, sir. Captain Collins under Professor Baird received \$1,800. It appears now that he is drawing \$2,700.

By Senator SQUIRE:

Q. What does he do?—A. As I understand it he is in charge of the statistical inquiries, a part of the work that used to be performed by Mr. Smiley.

By the CHAIRMAN:

Q. I will read you the resolution authorizing this committee to conduct this inquiry?

[The chairman read the resolution.]

Q. Now, that is what has been submitted to us. If you can give us any light on that, if you have any statements to make affecting the administration of the office, and so on, we will be glad to have you do it in your own way. We do not know what you know about it and consequently can not make exactly the proper inquiries.—A. In regard to favoritism, take this man Collins. He has a brother, D. E. Collins, who appears on the rolls. He has a daughter, Miss Lillian Collins, who appears on the rolls, who, according to the Blue Book, is charged to Maryland. I doubt if she ever lived in Maryland up to the day of her appointment. George Collins's name appears.

Q. Do you know whether he is connected with the other Collins?—A. That is one question I would like to have solved. S. J. Morton and J. Morton, Gloucester, Mass.—

Q. What about them?—A. It has been reported that they are brothers-in-law of Capt. Collins.

Q. Do you know that to be a fact?—A. No, sir.

Q. You do not know whether they are good officials?—A. I do not think that I am in a position to judge as to their capacity or efficiency. Tarleton H. Bean, who was ichthyologist and editor of the Fish Commission—

Q. What about him?—A. Under Professor Baird he drew \$2,100. To day he is drawing \$2,400 a year. He has a brother in the National Museum.

Q. That is not connected with the Fish Commission?—A. No, sir. It is a Government institution.

Q. He might have three or four other brothers in the Interior Department?—A. A. B. Herr is said to be a cousin of Dr. Bean. He is in the employ of the Commission, too, and appointed May 1.

Q. In the employ of the Fish Commission?—A. Yes, sir. Mr. Rathbun under Professor Baird was drawing, I believe, \$2,000. Under Commissioner McDonald he draws \$2,700.

Q. Does he occupy the same position as he did then?—A. Well, I think he has a little different title. At present he is designated as in charge of the scientific inquiry.

Q. Which is a promotion in point of responsibility?—A. I think the duties and responsibilities are about the same now as they were under Professor Baird.

By Senator BLODGETT:

Q. Has he additional duties?—A. I could not say about that. Of course I am not in the inside of the Commission.

By the CHAIRMAN:

Q. He has been in the employ of the Commission for quite a number of years?—A. Yes, sir; he went with the Commission on the summer trips when they were working on the coast year by year under Professor Baird, and the students were allowed to go down and pursue their studies in natural history. I should like to know why Professor Verill and his assistant were dropped out.

By Senator SQUIRE:

Q. They have been dropped from the rolls?—A. Yes, sir; their names do not appear. Then there are the two Miss Bushes.

Q. Do you know these people?—A. I know Professor Baird had a high regard for him.

By the CHAIRMAN:

Q. Do you know why he has dropped out?—A. I do not. I know that Commissioner Baird had a very high regard for him and the work performed by him.

Q. You do not know whether he resigned or not?—A. No, sir; I do not.

Senator SQUIRE. The main point of this witness's testimony seems to be as to changes in the rolls. That is the only point you have in mind?

The WITNESS. I suppose there will be a further chance for some of the witnesses to again appear before the committee?

The CHAIRMAN. We can not go back, and unless there is some special reason we would like to hear from you everything that you desire to say to us now, because we have a great many things to attend to upstairs. We can not retrace our steps very well. Just give us any information that you desire to now.

The WITNESS. There are several points to be taken up in that line. The question of his interest in patents used by the Government, trips across the continent, and other trips at Government expense.

By the CHAIRMAN:

Q. What about the patents?—A. He is interested in the McDonald fish-way patent.

Q. As the inventor?—A. He claims to be the inventor, and Congress has appropriated \$50,000 for Great Falls and an additional \$25,000 to apply it, which has not yet been done.

Q. Has Mr. McDonald received anything from the Government for the use of the patent?—A. I do not know that he has. But there is a clause in the river and harbor bill of 1888 and '89 that the Secretary of War is empowered—I can not give you the wording of it—to construct fish-ways. Mr. McDonald said to me that he secured that legislation.

Q. Are you connected with this fish-way?—A. Yes, sir.

Q. Do you know that it is a good thing?—A. I do.

Q. And you do not know whether Mr. McDonald has ever made any charge against the Government for the use of it?—A. I know that in this case, because I wrote the letter myself; he wrote a letter to the Secretary of War.

By Senator SQUIRE:

Q. Have you an idea that he intends to make a claim?—A. He can not make a claim because that letter is already filed in the War Department.

By the CHAIRMAN:

Q. Are there any other patents?—A. He has a patent filter which

is now being experimented with and remodeled and adopted in the Armory Building.

Q. You say it is adopted at the station?—A. It is being experimented with and perfected in the Armory Building.

Q. Do you know that it is being used to-day in there?—A. It is running there, and he is working with it day by day.

Q. Do you know whether the various tanks are supplied with water which has been filtered by it?—A. They are supplied principally from the Loomis filter. But he has men in the Armory Building who have taken their time, or the Government's time, making alterations and perfecting this filter.

Q. Is it in use there?—A. He has it in use. It is in use, of course. It is being tested. He is altering and perfecting it.

By Senator SQUIRE:

Q. What is the point you want to bring out?—A. The point I want to bring out here is that this is a personal patent and that he uses Government employes' time in altering and in making plans and models of this filter.

By the CHAIRMAN:

Q. Does he make them there for sale?—A. They are not perfected; they are not really to be put on the market.

By Senator SQUIRE:

Q. Do you mean to say that he is using the time of Government employes for his own benefit or for the benefit of the Government?—A. I do not see wherein it would be a benefit for the Government, if he is perfecting a patent filter which he expects to complete and put on the market for general sale. As I understood from him, a company has been formed for this purpose.

Q. You charge that he is employing men, the Government paying them, to work on plans and models for a patented invention which is his own private property?—A. I do, sir. Then, this trip to Alaska. You have got the questions all there. You will come to that on other witnesses. I like to know about the trip that was made to Alaska last year in charge of Dr. Bean.

By the CHAIRMAN:

Q. What light can you give us on that subject?—A. All the light I can give you is that Dr. Bean came into my room one day and asked the use of my telephone. He called up Fitch, Fox & Brown, real estate men, and asked them "how about those securities," and if it would be all right; that he wanted the money; that he must have it. Knowing that he had been buying property, I said to him, "Are you buying another house?" He said "No, I am not. I want to get off to Alaska and the appropriation bill has not passed, and I have got to furnish the money to make this trip;" which was sometime in July, I think.

Q. Last year?—A. Yes, sir; before the appropriation bill had passed.

Q. Do you know that he made the trip?—A. I know he did. I know that one of these reputed nephews of Colonel McDonald was on that trip.

Q. Do you know what they went for?—A. He told me that he was going to get some statistics and some photographs and some fishes.

Q. Do you know whether he accomplished that?—A. I believe he did get a few photographs.

By Senator SQUIRE:

Q. What is the impropriety charged?

By the CHAIRMAN:

Q. What bearing has this?—A. That he took this nephew of the Commissioner and gave him this trip to Alaska——

Q. Was he employed in the office?—A. And that Dr. Bean borrowed this money in advance, anticipated the appropriation, to make that trip.

Q. He advanced the money himself?—A. Yes, sir.

By Senator BLODGETT:

Q. He took his chances of getting it back?

By Senator SQUIRE:

Q. What is the impropriety of that? The man advanced the money; he went on business; it is his lookout whether he gets his pay or not.—

A. I suppose it is, but I did not know that it was customary for any man to anticipate a Government appropriation.

The CHAIRMAN. Of course he does it at his own risk. If the Government had failed to make an appropriation, and he had gone on and spent his money, he would have been out of pocket. If the appropriation was subsequently made for that investigation, and he was re-imbursed, he had simply done the Government the favor of advancing the money that he might go at the proper time.

By Senator SQUIRE:

Q. You charge that a nephew of the Commissioner went along on this trip and had his expenses paid by the Government?—A. Yes, sir.

Q. Was not this trip for the purpose of carrying out the purposes of the Fish Commission? Was it not proper business for the employés to be engaged in it?—A. It might be. But here was a trip made for a special purpose by a specialist and this nephew was a comparatively new boy. I think he is still a minor. On such trips it is generally supposed they would select experienced men for the work.

Q. You think it was favoritism?—A. I do.

By the CHAIRMAN:

Q. Your criticism is on the selection of the Commissioner of this young man. In your opinion it was a matter of favoritism in sending this young employé, who was a nephew of his, on that trip?—A. I do.

The CHAIRMAN. We understand that, I think.

TESTIMONY OF LOUIS GARTHE.

LOUIS GARTHE, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. You have seen some of these newspaper articles; you have seen the article published in the New York Press of May 25, which contains certain charges against Commissioner McDonald?—A. Yes, sir.

By Senator SQUIRE:

Q. There was one published in your paper?—A. An article appeared in the American last Monday morning.

By the CHAIRMAN:

Q. Do you know anything about these charges made there?—A. I would rather you would not ask me that question, though I believe this charge to be true.

Q. Which one?—A. The charge regarding relatives. I believe it is true.

Q. Do you know how many relatives he has appointed?—A. I do not on a moment's spur. My statement was published last Monday morning, and what was in that is all I know about it.

Q. Were those statements made from your own knowledge and investigation?—A. Those statements were given to me.

Q. And you believe they are true?—A. Yes, sir.

Q. Will you state to the committee who gave you the information?—A. I do not care to do that.

Q. You spoke of an article which you sent to your paper. Have you got it with you?—A. No; I have a file copy at my office.

Q. We have not got it here. Can you tell us the substance of it?—A. It went rather into the fact that while the Commission was appointed to do certain work it had not, in my opinion, accomplished that. The general purpose of that article was not to make any charges against Mr. McDonald any further than that the work of the Commission had not been performed.

The CHAIRMAN. That general subject we will hardly go into.

Senator BLODGETT. Not to-day.

By the CHAIRMAN:

Q. You do not know of your personal knowledge that one or two or a half dozen of the appointments made by the Commissioner were of his own family or relatives?—A. I was told so and the man who told me I implicitly believe. If I told you I had a brother you could only take my word for it.

Q. But you would know?—A. Yes, sir.

Q. If you know that Commissioner McDonald has appointed more or less of his own relatives, if you know it and of course the circumstances would admit of your knowing it, then you could say so. If you do not know it, you can say so, and that is what I understand you to say, that you have been informed?—A. I was informed. You might tell me you had a brother and I could only know it because you told me so.

By Senator SQUIRE:

Q. Some one informed you. You do not know it by observation?—A. I do not know Mr. McDonald. If I were to see him in the room I would not know him.

By Senator BLODGETT:

Q. Do you know personally any of these employés who are alleged to be relatives of Commissioner McDonald?—A. I do not recognize any of these names; we know so many people in the Departments. I know dozens of persons around the Senate and do not know their names.

By the CHAIRMAN:

Q. You do not recognize the names?—A. No, sir.

By Senator SQUIRE:

Q. In your article you did not go into the details?—A. The American has no fight against Mr. McDonald. Our State is interested, because we have the oyster industry. The Commission has not done the work we hoped it would. We have no charge against Mr. McDonald. We have a charge simply against the utter failure of the Fish Commission, of which Mr. McDonald is the head, to accomplish what we had hoped it would. That is our grievance against the Fish Commission.

TESTIMONY OF GEORGE H. APPERSON.

GEORGE H. APPERSON, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your full name?—A. George H. Apperson.

Q. Where is your place of residence?—A. My residence is Topeka, Kans. I am temporarily stationed here.

Q. You are connected with the press?—A. Yes, sir.

Q. With what paper?—A. The St. Louis Globe-Democrat.

Q. Was your attention called to an article published in the New York Press of May 25, which is before you there?—A. (Examining article.) I have read the article.

Q. Do you know anything about the various charges, or any of them, against the conduct of the office?—A. Nothing except what has come to me from other parties. I do not know of my own knowledge.

Q. Do you know anything about this charge that the Commissioner has appointed a long list of relatives, with the salaries, etc., given in the list before you? Do you know any of those parties?—A. I am not personally acquainted with any of them.

Q. Do you know anything about the alleged appointment of that list of relatives, other than that which you get second-handed?—A. No, sir; not of my personal knowledge, except as I perhaps have heard from sources, more or less official, in the Department that these appointments have been made, the persons whose names are given there, but as to the relation of them to the Commissioner I could not say of my own knowledge.

Q. In regard to any other of these charges which are made there, have you any knowledge that would be of advantage to us?—A. I think this one is merely about relatives in office. I do not know anything about that except what has come to me from other parties; not of my own knowledge; but I have ascertained from official sources as to the increase in the expenditure under the Commissioner, but I could not say that there is anything irregular about that.

Q. Have you investigated at all as to whether or not as a matter of fact the Commission has been extending its work; whether the number of fish stations has increased, etc. Have you any knowledge on that point?—A. Nothing from my own observation. I understand they have increased their stations and extended the work to some extent. You understand, I suppose, that my information on the subject in this matter is obtained in the same way as I get it in other matters, more or less official.

Q. If a man knows anything you go for him?—A. Yes, sir.

Q. Your name was given to us as a person who knew something about this matter, and if you are in possession of any facts which would bear upon this inquiry, as to the management of the affairs of the office, we would be glad to have you state it in your own way.—A. I think you must have been misinformed as to the extent of the information which I have. I have written some articles about it at various times within the last couple of months, based upon information which I got partly from the Departments and partly from persons who assumed to know what they were talking about, all tending to show that there had been a remarkable increase in the expenditures under Commissioner McDonald as compared with the expenditures under his predecessor.

Q. Increase in the total outlay of the Commission; did they state to you how much money had been expended on new station houses, etc?—A. No, sir; I do not think they did.

Q. And hatcheries and so on?—A. I do not think I have any details as to just what this money was used for.

Q. Only that the gross amount was increased?—A. Yes, sir; I noticed it was a remarkable increase. It would be considered a remarkable increase for any department in so short a time. Of course all the departments are extending in a manner, and expenses are increasing, but I noticed in this one particular that the proportion was much greater.

Q. The increased expenditures of the Navy Department this year will be pretty large?—A. They will be extraordinary.

Q. Because they are building new ships. If the Fish Commission have put a large station, sufficiently equipped to attend to the white-fish hatchery in Lake Erie, and if they have built in Colorado, near Denver, a hatchery which calls for \$10,000 or \$12,000, and in California other works, that would account somewhat of the increased expenses?—A. I did not understand, of course, that there had been any particular change of policy in the management of the Commission since Mr. McDonald came in.

Q. Your attention was called to the fact that the total expenditures were larger.—A. Yes, sir; my information was that the policy was about the same. A reasonable increase would be expected, of course, but I did not know that Mr. McDonald had inaugurated any special reform or extension.

By Senator SQUIRE:

Q. I would like to ask the witness whether he knows any facts of his own knowledge relating to any of these charges, or whether it is hearsay from others?—A. I stated in the beginning that my information was obtained from other parties.

Q. That point being ascertained, are you willing to give the names of any parties who gave you this information, or any of this information?—A. Well, I do not think I could, but I am certain that all the parties from whom I obtained information are witnesses before this investigation.

Q. You would not care to give their names?—A. I do not care to.

At 1 o'clock p. m., the subcommittee adjourned until to-morrow at 11 o'clock a. m.

WASHINGTON, D. C., *June 14, 1890.*

The subcommittee met at 11 o'clock a. m., pursuant to adjournment. Present: Senators Stockbridge (chairman) and Squire.

TESTIMONY OF FRANK BLAISDELL.

FRANK BLAISDELL, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. You reside in Washington?—A. Yes, sir.

Q. Are you in the employ of the Fish Commission?—A. No, sir.

Q. Were you connected with it?—A. Yes, sir.

Q. You have been in the past?—A. Yes, sir.

Q. When did you enter the service of the Commission?—A. I could not say the exact date.

Q. Give the year.—A. It was in 1888, I think.

Q. In 1888?—A. I think so. I am not positive as to just the date.

Q. Two years ago?—A. Yes, sir.

Q. In what capacity were you employed at the time of entering the service of the Commission?—A. The first service that I did for the Fish Commission was as civil engineer. Now, that question might be answered differently in this respect: that I was employed to make a survey for the fish-ways at Great Falls, Maryland. I can not say whether that was the Fish Commission or the General Government. There was an appropriation made for a fish-way at Great Falls, or rather an appropriation to complete the erection of fish-ways at Great Falls, and I was employed to make the survey.

Q. Were you employed by the Fish Commissioner?—A. I was employed by the Fish Commissioner, yes, sir; but it was an appropriation of course independent of the Fish Commission.

Q. But it was under their direction?—A. Yes, sir.

Q. You were engaged at that work?—A. Yes, sir.

Q. In what capacity did you serve the Commission after that?—A. As civil engineer of the Fish Commission.

Q. Are you now in the employ of the Commission?—A. No, sir.

Q. When did you leave the service?—A. On May 1 of this year.

Q. You have seen some newspaper articles, especially in the New York Press, criticising the Commissioner and the management of the office?—A. Not specially in the New York Press.

Q. You have seen it in various newspapers?—A. Yes, sir.

Q. Are you aware that the drift of those articles is criticising the management of this office especially in reference to favoritism in appointments and as to the general management of the office; if you have any knowledge on those points, from the fact that you are in the establishment, as to the discharge of employes to make room for friends of the Commissioner, or of the appointment to office by the Commissioner of relatives of his, either of his or his wife, please state it.—A. Yes, sir; I can state positively in regard to relatives; that is one point that I have noticed.

Q. Give us all the information you can upon that point?—A. There are two Lewises, one Robert and another C. E. Lewis; a brother and sister of the Lewises married a sister and brother of Mrs. McDonald; Francis McCormick is a nephew of Mrs. McDonald, her brother's child; these are minors.

By Senator SQUIRE:

Q. Two persons.—A. These two persons, Mr. McCormick and Robert Lewis?

Q. They are employed there?—A. Yes, sir.

Q. In what capacity?—A. Clerks, I should say.

Q. Do you know what pay they receive?—A. Fifty dollars a month Francis McCormick, and Robert Lewis \$60 a month, and C. E. Lewis \$90 a month.

Q. You say they are connected by marriage?—A. By marriage, though not blood relation.

Q. Are those all there are of the family that you know of who are associated with the Commission in any way?—A. I do not know except

from statements that I have heard from time to time of the fact of two others being. One I am positive is not.

Q. Not what?—A. Not a relative of his; Miss Bessie S. Stocks.

By the CHAIRMAN:

Q. What I want to know is if you know about any members of the family connected by marriage or otherwise, so that you can cover the whole thing. There are only three as far as you know?—A. As far as I know; yes, sir.

By Senator SQUIRE:

Q. I would like to ask you this question——

The WITNESS. Excuse me, I should say right there that these young men are boarding at Colonel McDonald's; they reside there.

Q. They are members and a part of his household now?—A. Yes, sir; they are considered a part of the family.

By the CHAIRMAN:

Q. I would like to ask you whether persons were dismissed from the service to make room for these relatives of the Commissioner?—A. I could not say that; I do not know.

Q. You do not know whether there were vacancies created for them or whether they were called in as new help?—A. No, sir.

By Senator SQUIRE:

Q. Do you know how long they have been employed?—A. Well, C. E. Lewis for some time before I went into the Commission, and Robert Lewis before I went into the Commission, that was over two years, I can say, and Mr. McCormick not as long as that. That was Mrs. McDonald's maiden name.

Q. You say the Lewises were appointed before you went into the service of the Commission?—A. C. E. and Robert.

Q. Before you went in?—A. Yes, sir.

Q. When you went into the service of the Commission, was it before or after the appointment of the present Commissioner?—A. After the appointment of the present Commissioner.

Q. It was after the appointment?—A. Subsequently, yes, sir.

By the CHAIRMAN:

Q. Quite soon afterwards; it must have been, if it was in 1888. He was confirmed in March probably.—A. Well, it was in July, I think.

Q. July previous?—A. Subsequent.

Q. Do you know how long the Lewises had been in there when you went in?—A. Well, Robert Lewis could not have been in a very long time. He was appointed after Colonel McDonald was made Commissioner.

Q. Was the other one appointed by Professor Baird?—A. I could not state as to that.

Q. How about the other one, McCormick?—A. McCormick since that time by Colonel McDonald.

Q. That would leave two appointed under McDonald's administration and the other one you are not certain about?—A. I am not certain about it.

Q. You say that there were no other persons so far as you know who are connected by relationship, family relationship, with the Commissioner now engaged or who have been engaged. Are there any others who are not engaged now, do you know, that the charges would apply to?—A. None whatever.

By Senator SQUIRE:

Q. Let me ask you why you left the service of the Commission, was it voluntarily, did you resign, or were you removed?—A. No, sir; I simply received this notice:

“ F. BLAISDELL, Esq.,

“ *U. S. Fish Commission:*

“ SIR:

“ Your services as draughtsman will not be required beyond the close of the current month, and your compensation will cease on and after May 1st, 1890.

“ Very respectfully,

“ M. McDONALD,
“ *Commissioner.*

“(Through Mr. Bailey.)”

Q. What is the date of that?—A. April 26, 1890.

Q. You regard that as a discharge?—A. That is it. There is no statement made as to why I was discharged, and I never asked.

Q. Do you know whether there was any statement in writing or not; do you know the reasons why you were discharged?—A. No statement in writing.

Q. Was there any other reason given?—A. None except that; that is all.

By the CHAIRMAN:

Q. After you completed the survey that you have spoken of at Great Falls I take it you then entered the office of the Fish Commission?—A. Yes, sir; Mr. McDonald requested me to take this position. I declined to do it at first, and he insisted upon my taking this position as civil engineer of the Fish Commission.

Q. I do not quite understand. What were the duties of the civil engineer? I understand if there were fish-ways to be constructed, that is an engineering matter. Aside from that, what are the duties of a civil engineer in connection with the Fish Commission; what did you do filling that position? What were your duties after you completed the Great Falls survey?—A. After I completed the plans of the Great Falls fish-way I was then engaged in making a survey at Craig's Brook Station, Maine, and the plans for a new hatching building and building stables, etc., for that station.

Q. Whatever was necessary in the way of actual surveys of land, did you do anything of that kind?—A. Yes, sir; I made a topographical survey of this land, and did it while the snow was on the ground. I made the survey and I made preparatory plans while I was there, and also made a report while there and estimates for the completion of this work. The report, I believe, was approved of by the superintendent of the station, and the work is being carried on now.

Q. Did you seem to have work to do at the time of your discharge?—A. Yes, sir; there was plenty of it.

Q. Was there another man assigned to your place?—A. No, sir.

Q. They never have employed a man in your place?—A. Not that I know of. I could not state positively. You asked me the question what were my duties subsequent to the erection of the fish-way at Great Falls. I presume you want me to continue on that.

Q. Please do so.—A. After this work the preparation of the plans for the Graig's Brook Station, was completed I was then sent by the

orders of the Commission to Neosho, Miss., to make a survey and plans for the new hatching station at that point. I went to Neosho on receipt of this letter and made the survey, made preliminary plans while at Neosho, returned to Washington, and completed the plans for the ponds; it was to be a pond station. I made a topographical survey showing the ground, and then made a plan of ponds, a series of ponds, and estimates for piping for that station, and then afterwards made plans of the fence and gate-ways at the station.

Q. Does that complete the work you did?—A. No, sir. Then afterwards I was instructed to make the plans of a hatchery building at Put-in Bay, Lake Erie; those plans I made; also the plant for the building, all necessary machinery, together with a specification, not only of the building—that is not correct—the specifications of the building I made as well as the plans of the plant, the machinery, etc.

Q. I simply wanted to know whether you had been continuously employed upon this class of work?—A. It will take me but a little while to run through with it in brief, because there are some points you may wish to know in relation to this Put-in Bay building that may be of interest to you to know, and by going through this outline you will perhaps then have it clearer in your mind. Afterwards I made drawings for a new steam-launch to be used at this station.

Q. The Put-in Bay Station?—A. Yes, sir, on the lake. Then I made drawings showing all the piping machinery of the Wood's Holl Station, Massachusetts, and the Gloucester Station. The central station I was at work upon; when I left the Commission it was not completed. The other work was all completed. I can say that I also—this is a question that I have seen brought up in the papers—I made a drawing of the plant to be used in the shipment of shad to Germany.

Q. Have you anything to testify to in regard to any undue administration of affairs? These words occur in the resolution: "Any undue administration of the department." Have you anything that you feel it to be your duty to state to this committee, anything irregular? You have already testified as to the relatives employed.—A. I do not want to go into any personalities or anything of that kind; I simply wish to state for the information of this committee that I considered it mal-administration, in my opinion, in regard to this proposed shipment of shad to Germany. The expenditures were created before definite arrangements had been made with the German Steam-ship line to carry this plant to Germany; it would seem that this is a criticism upon the business methods of the Commission. There was a feed and air pump purchased, there was a tank purchased, and I have understood, but I could not say—I will leave that out about other matters—and they found out after all this work had been done that they could not be permitted to take this plant over to Germany.

Q. Was the expenditure wasted, or could it be used in some other place?—A. It would be wasted.

By Senator SQUIRE:

Q. Well, was it?—A. It was a special plant for that purpose.

Q. Could not it be used here somewhere?—A. I think not.

Q. The shipment was not made?—A. No, sir.

Q. What was the expense of it, do you think?—A. Well, I should say several hundred dollars; I do not know just how much.

Q. Not a thousand?—A. Not a thousand.

Q. Could the pumps you spoke of, the air-pumps and feed-pumps, be made use of in other ways?—A. They could be used like any plant in

time. They might be of use, but I do not know when there would be any such particular feed or air pump used. It was for a special purpose.

Q. They were to take them across the ocean?—A. Yes, sir.

Q. You say they could not ship this plant?—A. No, sir; the steamship company would not permit of it.

Q. What do you mean by the plant?—A. I mean the machinery; they had to have the proper appliances. It was all proper; the plant was all right as far as the details were concerned; no doubt they exercised due diligence about that; but in a business way they should have made arrangements beforehand.

Q. Is that the only favoritism you think of in relation to undue administration; the only fact you know of, of your own knowledge?—A. Well, it would be criticism on employes, that is all; that he entrusted men who were not competent for the performance of certain duties, that is all.

Q. Well, what for example?—A. Mr. Gay in selecting a site and his connection that he had with Put-in-Bay Station; that, I think, is a material point, and I would like to speak of it. When these plans were completed of the Put-in-Bay Station and the contract was let, Mr. Bayley, Past-Assistant Engineer of the United States Navy, was put directly in charge of this work. Mr. Bayley was a very competent man; he was considerably interested in the discharge of his duties in connection with this particular work. The contract was let, and as the work progressed Mr. Gay visited the station at Put-in Bay, and there he induced the Commissioner to have a lot of rock excavation, which cost several hundred dollars, to have the building lowered, which was entirely unnecessary, not only causing a useless expenditure of money, but furthermore it affected the looks of the building.

Q. Unfavorably do you mean?—A. Unfavorably; the looks of the building.

By the CHAIRMAN.

Q. Who is Mr. Gay?—A. Mr. Gay occupies the position of inspector of stations. He has no familiarity at all with construction or engineering matters.

Q. You say this was done under his direction?—A. Yes, sir; it was at his suggestion that he made this, and he was disposed to interfere, and he wanted to make suggestions all the time, and he did from the very start.

Q. Who did this work under his suggestion?—A. The contractor; it was an increase in addition to the contract work.

Q. That is, it made an additional price beyond the original?—A. Yes, sir; without consulting Mr. Bayley, who was the engineering officer, or myself, who made the plans of the building——

Q. These changes were authorized or directed by the Commissioner?—A. Not only made, but it altered our plans for the machinery when we came to put it in. Right upon that point I want to say another thing in connection with this in regard to Mr. Gay; he was sent there to select a site for this building at this Put-in-Bay Station; my first knowledge of the plant was when he brought me a sketch of a survey made by John Brown; he was a son of the John Brown of Harper's Ferry fame. I noticed a street running in the rear of where there was to be this building put up. Now, he secured this ground, it was given to them, to the Government, for the erection of this building, and in consultation with the Commissioner and Mr. Bayley, we had determined on about the size of this building. This building was to be and is now

the largest hatchery station in the world, and I saw at once that this plot was not large enough; furthermore, that we had no outlet only from the lake front; a strip was reserved immediately back shutting off communication with this street, and I apprised the Commissioner of this fact, and then Mr. Gay had to return to Put-in-Bay and enter upon negotiations again to secure this additional strip.

By Senator SQUIRE:

Q. You mean they had to buy that?—A. They did not have to buy that. The inference to be drawn was that in time they should have to secure this outlet, and this shut them off of that.

Q. When they found they wanted it they went to work and secured it?—A. We insisted upon having it and got it afterwards. It was not a good-sized city lot.

Q. They got it for nothing?—A. Yes, sir.

Q. They did not seem to see at first that they needed it and afterwards they did; upon representations they found they needed it and got it?—A. The Commissioner, after he was informed of this, attended to getting this strip.

Q. You informed him of that?—A. Yes, sir; I should like to say——

By the CHAIRMAN:

Q. I will read you the resolution under which we are making this inquiry and you will see the scope of it.

(The Chairman read the resolution.)

A. The subject of favoritism, that would be material.

Q. Tell us what you can upon that point.—A. In my capacity as civil engineer and draughtsman I had occasion to constantly see the work done by Mr. E. I. Rogers, an employé of the Fish Commission; his work was making drawings and plans of various kinds and his compensation for the same was \$75 per month. Mr. Rogers was painstaking in his work and industrious, and I consider that his work was admirably well done.

By Senator SQUIRE:

Q. You consider so?—A. Yes, sir. Of course I can not say anything further. He made free-hand drawings of boats for illustration; his light-line drawing work was good, his lettering was good, and while Mr. Rogers was working under my direction I spoke to the Commissioner of the excellence of his work and said that in my opinion Mr. Rogers should receive a larger salary. Colonel McDonald, the Commissioner, requested me to show him some of Mr. Rogers's work, which I did; he expressed himself as surprised that Mr. Rogers was able to do such fine work. His work, I am free to say, any civil engineer, draughtsman, or artist would consider worth at least \$5 a day, and Mr. Rogers has told me that he has had repeated promises of an increase in his salary. I know of employés in the Fish Commission who get the same salary and more than Mr. Rogers gets that do not begin to give an equivalent.

Q. Are there any who get more?

The WITNESS. More than Mr. Rogers gets?

Senator SQUIRE. Yes, sir.

A. Not more for the same work, not in draughting, but in other capacities. There is one who gets more; he gets \$6 a day, and he is well worth that; that is Mr. C. E. Gorham, a very competent man.

Q. Perhaps it is not necessary to have more than one man.—A. Yes, sir. There is a great deal of work ahead.

Q. As I understand you now, the burden of your testimony is that E. I. Rogers in your opinion is worth more than he is getting?—A. Yes, sir.

By the CHAIRMAN:

Q. And does not get enough?—A. Yes, sir; and he has been discriminated against.

Q. You think he has been unfairly discriminated against?—A. Yes, sir.

Q. Do you consider him as good a man as Mr. Gorham?—A. No, sir. Mr. Gorham is an exceptionally fine man. I have had eighteen years' experience in civil engineering and draughting, and have been a member of—

The CHAIRMAN. Never mind about that.

The WITNESS. I did not know but you wanted to test my capacity to speak upon this subject.

Q. The question would arise whether they need more than one such first-class man.—A. Yes, sir, for that class of work, because it is for illustration and map work that Mr. Rogers is engaged upon, and that is fine work.

Q. Do you know of any reason why he does not get more pay; would you attribute it purely to some personal reason?—A. I think it is a purely personal reason, not but what I think the Commissioner thinks he is worth more, but I think it is some personal reason. I do not like to go into personalities in regard to this thing.

By Senator SQUIRE:

Q. Do you know of any men who are employed there who are not worth what they are getting?—A. I know Mrs. Palmer is getting \$75 a month. The nature of her work seems to be principally pasting scraps from newspaper clippings in books, and she gets \$75 a month, the same salary that Mr. Rogers is getting.

Q. She is not a relative of the Commissioner?—A. No, sir. The only relatives are those I have stated. I do not know of anything else that is in the papers. It speaks there of Fort Washington; that I do not know anything about.

TESTIMONY OF THOMAS W. KELLER.

THOMAS W. KELLER, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where is your residence?—A. West Virginia.

Q. What place?—A. Romney.

Q. Have you been in the employ or are you now in the employ of the Fish Commission?—A. I am, sir.

Q. How long have you been in that employ?—A. I was appointed in April, 1888.

Q. Where do your duties keep you?—A. My duties at this time are here. My duties when I first went into the Commission were at Fort Washington for two months, and then I came here to the office.

Q. What position do you fill?—A. I am a clerk in the Fish Commission.

Q. A clerk in the office?—A. A clerk in the library.

Q. Were you ever employed at the Fort Washington station?—A. Yes, sir.

Q. In what capacity?—A. I was record clerk at the Fort Washington station.

Q. What do you know as to any funds being accumulated from the sale of shad and other fish at that station? State with regard to that.—

A. Well, sir, the Commission runs a seine at Fort Washington station for the collection of shad eggs, and of course the Commission catches fish and disposes of them, and they are shipped to market and the proceeds pay the expenses of the seine; when I say the expenses of the seine I do not mean to say the entire expenses.

Q. They go towards it?—A. Yes, sir; they go towards that, but there are certain salaried men on the seine who are paid by the Commission.

Q. Do you mean the entire proceeds of the sale of these fish go to pay for hauling the seine?—A. I do not say the entire; I do not mean to say it takes the entire.

Q. What becomes of the other part, which is not made use of in that way?—A. They generally dip the seine about April, from the 5th to the 10th of April.

Q. It lasts about two months?—A. It generally lasts till about May, until somewhere about the 15th of May, somewhere about there.

Q. Let me ask you this question: In your position when you were at Fort Washington did it come in your way to know what was done with the money received for the fish sold?—A. Yes.

Q. You state that a part of that money was used to pay the expenses of the fish catching.—A. The greater part of them.

Q. What became of the other part?—A. The other part I turned over to Mr. Worth, the superintendent of the station. I turned over all the money to him. All the money was turned over to Mr. S. G. Worth each day as the proceeds were returned from the market. At the end of the season all the seine-haulers were paid out of that money; out of that fund.

Q. What became of the balance?—A. The balance Mr. Worth has.

Q. My question is, what proportion of it was not paid for the expenses?—A. Well, sir, I am only giving it from recollection, understand; I have not the books in front of me.

Q. In a general way, what was the rule as to that?—A. Something over \$40 I think was left in Mr. Worth's hands. What he did with that I do not know; I am not in a place to know.

Q. That was in the summer of 1888?—A. Yes, sir.

Q. Have you any knowledge as to the operations there in 1889?—A. Yes, sir, I was there in 1889.

Q. What was the course pursued in 1889?—A. The same in 1889, except in 1889 I can not say as to the amount. I think, though, that it was something in the neighborhood of \$100 or more that he had in his hands after everything was paid. In 1889 I would not state the amount. I made no settlement in 1889 from the fact that Mr. Worth took the account, which I did not have; some of the accounts, for instance, the amount paid to seine hands, he took that away with him before I had made a settlement, and brought it to Washington, and I never had hold of that afterwards.

By Senator SQUIRE:

Q. As I understand you, the money received from the sales of these fish that were taken for the purpose of getting the eggs was received by you?—A. Yes, sir, every day.

Q. You applied a part of that money to the expenses of hauling the

seine and other matters connected with the seine?—A. I did not apply any of it myself.

Q. You turned it all over?—A. Yes, sir.

Q. Did he pay a part of this money out for hauling the seine?—A. He did so. He paid the wages of the men, the seine-haulers.

Q. And, in 1888, all but \$40?—A. I did not say all but \$40; I said in the neighborhood of \$40.

Q. Now you say that there were some men employed upon this seine work that received pay from the Government; the expense of hauling the seine, or whatever other work there was about it, was not all paid out of this money?—A. No, sir; only the seine-haulers were paid out of it, except, I think, Captain Harron, who received a salary as seine captain from the Government.

Q. Has that been the practice right along since that time?—A. I can not say as to this year. I am speaking of 1888 and 1889.

By the CHAIRMAN:

Q. You say that \$40 was turned over by you? What is the name of the gentleman you paid it to?—A. Mr. Worth. I turned over the whole each day to him; each day as the proceeds were received.

Q. And the next year, in 1889?—A. The next year, in 1889, there was something in the neighborhood of over \$100.

Q. Besides what was paid to the seine-haulers?—A. Yes, sir. I want you to remember I did not make that settlement in 1889.

Q. You say there might have been a little less or a little more?—A. Yes, sir.

Q. What do you know about Mr. Worth being drunk and intemperate?—A. Well, sir; I suppose Mr. Worth did drink some down there.

Q. To what extent did he drink—to a degree which interfered and incapacitated him for the discharge of his duties?—A. I have seen Mr. Worth under the influence of liquor.

Q. So that he was not fit to do business?—A. Never but on one occasion.

Q. Was he in the habit of drinking daily and then only occasionally getting a drink too much?—A. I could not say that he drank every day.

Q. Upon one occasion that you know of he drank too much?—A. Yes, sir.

Q. How many days did it extend over?—A. One day; that is all.

By Senator SQUIRE:

Q. Was it upon any special occasion, or did it simply happen so?—A. Well, on one occasion, one night, he brought some fish to Washington; it was in what we term the glut, and they catch great quantities of them. We have a boat there, a little tug-boat, that we use, launch No. 61, that we use for collecting the eggs from different shores. That boat was brought to Washington with these fish, and the next day when they returned I noticed Mr. Worth in a bad condition; that is, he had been drinking too much, and I said to him, "Mr. Worth, you are not going to send these men down the river to-day to Chapman's Point; they have been up all night last night, and it is too much to send them down there and stay until 1 or 2 o'clock to-night again," and he informed me it was none of my business, that was his business. I said, "All right, sir; it is your business," and he immediately went up to the house and went to bed.

Q. Did he send the men down or not?—A. Yes, sir; he did.

Q. They got back all right?—A. They got back safely, but still they had been up all night, all the night before, and the day before.

By the CHAIRMAN:

Q. Have you known any other instances when this condition of inebriety was such as to be detrimental to the public service?—A. Well, I do not know, except what I heard.

Q. You do not know it of your own knowledge?—A. Only what I have heard the men talk about. My business is in the office.

Q. Do you know whether the fact that Mr. Worth was tipsy upon that occasion was reported to Commissioner McDonald?—A. I would not say that. That is as far as I know.

Q. You do not know whether he was apprised of it?—A. No, sir.

Q. What do you know about photographs being taken there by Mr. Worth and sold by him? Do you know anything about that?—A. Well, Mr. Worth has taken some photographic views along the river, and I did know of his selling them to men belonging to the Commission there.

Q. Belonging to the Commission?—A. Yes, sir; in the employ of the Commission.

By Senator SQUIRE:

Q. Was this a mere amusement of his, or was it a part of his duties?—A. I don't think it was a part of his duty, sir.

Q. Did this photographic apparatus belong to him or to the Government?—A. To the Government.

Q. Unless he was instructed to take views with it, why was it furnished by the Government?—A. I do not know, sir.

Q. Can you state?—A. No, sir.

Q. Do you know whether it was his habit to take views and furnish them to the office; to the head office?—A. I saw a set of views at the Commission.

Q. Were they views of the stations taken with a view of showing the station and the work?—A. No, sir; not any view of the station.

Q. Simply a general view?—A. There is a general law that would not allow him to take the station because it would include the fort. They were only photographs of the fishing and the hauling of the seines, etc.

Q. They were views representing the hauling of the seine?—A. Yes, sir, at the different points.

Q. Is that what the photographic apparatus was for—taking views of the hauling of the seine?—A. I do not know what it was for.

Q. You do not know what the purpose of the Government was in having that apparatus there?—A. No, sir.

By the CHAIRMAN:

Q. Allow me to ask you if Mr. Worth, or any other person acting with his consent and approval, made a practice of furnishing and selling liquors to the men, the seine men, or any of the men employed there.—A. Not that I know of.

Q. There has been a charge of that kind made?—A. No, sir; I know nothing of that kind.

By Senator SQUIRE:

Q. Did Mr. Worth furnish any dinners at Fort Washington to visitors and make any charge for the same?—A. Yes, sir; at least I heard he did.

Q. Do you know any of the facts about it?—A. I never saw the money paid. I heard he did. I do not state that except from hearsay.

By the CHAIRMAN:

Q. How do the men who are employed there obtain their board; that is, what is the system; do you have a mess and live together, and are the supplies furnished by the Government?—A. The spawn-takers and the men at the station, except the colored men, have a mess.

Q. They are supplied by the person in charge?—A. No, sir.

Q. Do you mean to say they board themselves?—A. They board themselves.

Q. How about Mr. Worth; does he board himself?—A. Yes, sir.

Q. He has a family there?—A. Yes, sir.

Q. And if he furnished any dinners and took any pay from visitors and strangers there he furnished them at his own house, did he?—A. Yes, sir.

Q. That is, you understand they were not furnished at Government expense?—A. No, sir, not at Government expense.

By Senator SQUIRE:

Q. It is charged that Mr. Worth at times was in the habit of charging visitors, not Senators and members or employes of the Commission, for meals. You say you heard he did that, but you did not see the money taken?—A. No, sir.

Q. As to any maladministration or anything of that sort, if you are aware of any facts about that we would like to have you state them?—

A. As far as Colonel McDonald is concerned I never saw anything that he did but that was for the good of the Commission at Fort Washington.

Q. Or anything in the office?—A. No, sir; I never was at any other station.

Q. I mean in the office?—A. No, sir; or not there.

Q. Whether Mr. Worth attended to his business faithfully; whether you know of any other instance where he did not properly attend to his duties?—A. That is the only occasion that I know of that he really neglected his duties.

TESTIMONY OF TARLETON H. BEAN.

TARLETON H. BEAN, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where is your residence?—A. My residence is in Washington.

Q. You are connected with the Fish Commission.—A. Yes, sir.

Q. How long have you been connected with it?—A. Sixteen years, nearly.

Q. In what capacity are you at present employed?—A. I am the ichthyologist of the Commission and edit the publications.

By Senator SQUIRE:

Q. Here are questions that have been submitted to the committee. We want to be open and straight about it. Have you not been apprised of Mr. Worth's habits at the Central Station on the Potomac?—A. I knew nothing about it.

Q. You know nothing about it?—A. Nothing whatever.

Q. Have you never heard of his being intemperate?—A. I have heard of his being intemperate, but not since his connection with the Fish Commission.

Q. Did you not hear of this instance, about his having sent boats down the river when the men had been up all night bringing fish to Washington?—A. No, sir; and perhaps one reason for not hearing it would be that my office has been in the Smithsonian Building until recently; until the publications were placed in my charge I kept my office in the Smithsonian Building.

Q. What state are you accredited to?—A. Pennsylvania.

Q. What are your politics?—A. I am a Republican, and have been all my life.

Q. What is your present position with the Commission?—A. Ichthyologist.

Q. Give a general outline of your duties?—A. When collections are received from any of the vessels of the Commission, certain portions of them may be sent to me for identification of the species and a report upon them. When letters are obtained from correspondents, in most cases, if they involve any technical knowledge of the fishes, the letters are referred to me for identification of the species if possible, and to prepare and give data for an answer; and of course, in reference to the publications, I have the ordinary editorial duties, to have the copies prepared and transmit proofs to the authors and receive them and to see that the corrections they indicate are made, and I have special investigations; also field work. If Congress calls upon the Commissioner to make an investigation and he needs my services, he orders me to go to some point on the coast or some other place within the range of his duties, and I go and make reports upon such trips. I have made a number of that kind to the coast of Long Island and New Jersey, and even on the west coast and to Alaska.

Q. What connection have you with the Forest and Stream Publishing Company?—A. I edit one of the departments of the Forest and Stream.

Q. What compensation do you receive from them?—A. \$1,500 a year.

Q. What other papers do you contribute to?—A. To no papers. I contribute to scientific journals, but not for pay. The Transactions of the American Fisheries Society, I have sent a paper there.

Q. To what other papers do you contribute?—A. To no other papers.

By the CHAIRMAN:

Q. Your contributions to these scientific journals, is that considered a personal matter or is it official, representing the Fish Commission?—A. Well, sir, it is pretty hard to say. Of course the work grows out of my relation to the Fish Commission.

By Senator SQUIRE:

Q. You said you furnished papers to various societies connected with the fishing interests. I ask you whether you do that in an official way?—A. No, sir; it is done with the consent of the Commissioner. His permission is always obtained for the publications of matters of that kind.

Q. I did not know but these various societies called upon the Commissioner to give them such information, and that you did it as an official matter.—A. The last one which I sent, for instance, to the Fisheries Society, was a paper read at Put-In-Bay, and had to do with the members of the salmon family and other families found in Alaska.

Q. Furnishing information to the society and to the country upon fishery matters?—A. Yes, sir.

Q. You do not receive compensation from any other paper except

Forest and Stream?—A. No other paper. It has nothing to do with my official work; it is not carried on in business hours at all.

Q. Did you take a trip to Alaska last year?—A. Yes, sir.

Q. Give the number and the names of the parties upon that trip.—A. Livingston Stone, of the United States Fish Commission at that time, the gentleman in charge of the piscicultural department of the United States Fish Commission, was a member of the party; Franklin Booth, of the University of California, went with us as surveyor, and Robert Lewis, of Washington, went with the party to take the part of rodman for the surveyor, and assisted in other duties. His time was principally occupied with the surveyor.

Q. Did he serve as rodman?—A. Yes, sir; he served as rodman for the surveyor.

Q. How long a time was he occupied with that upon his part?—A. The entire time of our visit was occupied in surveying.

Q. How long were you there?—A. From the 1st of August to about the 10th of September; a very short time, of course.

Q. During which time Mr. Lewis served as rodman for the surveyor?—A. During which time Mr. Lewis served as rodman for the surveyor, and a very arduous duty it was.

Q. He is a young man, under age?—A. I believe he is, yes, sir, under twenty-one.

By the CHAIRMAN:

Q. Did he perform the duties satisfactorily to the engineer?—A. Decidedly. His work was very highly praised by the surveyor.

Q. They were all on the pay-roll?—A. Yes, sir. Mr. Booth was put on the roll to take the place of the man who was selected here to take the place but could not go. Mr. Booth was recommended by Mr. Davidson, of the Coast Survey, and on the strength of that recommendation I asked permission to take him in place of the man who could not go. You know, it was almost impossible to get trained men in a place like Alaska, where men go only upon engagements for special purposes.

Q. You might have taken a man from Tacoma?—A. Yes, sir; we might have done that. He went for a mere nominal sum, and his services were worth, I am sure, twice what they cost.

Q. Including the expense of the transcontinental trip?—A. The round trip was only \$125.

By Senator SQUIRE:

Q. That is for fare alone?—A. Yes, sir.

Q. What pay was he getting?—A. I believe he had \$50 a month. He worked day and night. I am speaking of this man Lewis now. I have had a good deal of experience on that coast. I have been to Alaska twice, and I know I could not have replaced Mr. Lewis for \$100 a month, and besides that he did a good deal of work as a stenographer; he wrote quite a good many letters for me and saved my time.

Q. What other duties did he do besides writing letters?—A. He aided me very much in making collections.

Q. Collections of fish?—A. Yes, sir.

Q. That is, when he was not employed as rodman?—A. When he was not employed as rodman. He also assisted Mr. Stone materially in recording temperature observations and making examinations of the fish to see whether they were in fit condition for spawning. He was really a very useful all-around man.

Q. Can you give us a copy of your letter of instruction?—A. Yes,

sir. The full letter of instruction is contained in the Commissioner's report to the Senate and House.

Q. Can you furnish a copy of your report?—A. That is before the House and Senate now.

Q. When did you start upon the trip?—A. Upon the 10th of June.

Q. What was the total expense of the trip?—A. I have been trying to get that. I can not tell exactly what it is, but my impression is that outside of the salaries, the total cost of the trip was less than \$1,000; that includes 10,000 miles of travel and subsistence for two people, and nearly 5,000 for two other people. It also includes the cost of maintaining twelve men during a trip to the source of the principal salmon river in Alaska, and our subsistence during the whole time—six weeks in Alaska and San Francisco—for the time we spent there. The letter of instruction is embodied in the report to the Senate and House.

Q. What year was that?—A. It came in last week; it has not yet been printed. The investigation closed in October, 1889, and the report was handed in in January, 1890, and sent up to the Senate and House and ordered printed.

By the CHAIRMAN:

Q. Do you consider that trip as a wise measure, and were the investigations which you were sent to make important to the general interests of the Fish Commission?—A. I consider that they were very important.

Q. Were you looking particularly as to the salmon fisheries?—A. It had particular reference to the salmon fisheries of Alaska; it was an investigation conducted by order of Congress. This trip was paid for from the general appropriation in the same way in which the expenses of all other government expeditions are defrayed; the party in charge furnishes the money. It is taken up on vouchers, and the vouchers are paid if found correct as soon as presented. The census department is conducting an investigation of the same kind now, I happen to know one of the parties who has gone South. He furnishes his own money and gets it back on vouchers, and I did the same thing. Of course I borrowed this money.

Q. We do not care about that.—A. Upon security, upon my own property, and I paid 6 per cent. interest for the money.

Q. What was the date of the sundry civil bill?—A. I do not know.

Q. Give in detail the results of the trip.—A. The results of the trip were these: A report which is before Congress now, a collection which has been partly studied and made the basis of this report, and further collections which are now being studied and a report upon which is almost complete.

Q. Did you find new fish?—A. Yes, sir; but not salmon. This had particular reference to the salmon. The Commissioner took occasion to embody in his instructions reference to other fishes which might become valuable properties in the same region.

Q. That you investigated in connection with the salmon?—A. Yes, sir; particularly the river fishes, also the river plants which might afford shelter or food to the river fishes, which collections were made and the supplemental report upon them is nearly complete now and would have been complete had it not been for interruptions brought about by attacks of one kind and another upon the Commission, which, of course, have taken up a good deal of our time in one way and another. Then, besides that, besides the collections made, data was obtained for selecting the plottings or charts; particularly inland plottings are numerous, and they are embraced in the report which was made.

Q. You say the investigation was more particularly with reference to the salmon?—A. Yes, sir; Congress asked for an investigation on that subject.

Q. What rivers did you examine with reference to the salmon fisheries?—A. We examined first the Karlook River, which furnishes one-half of the Alaskan yield, 250,000 cases a year.

Q. Where does that come in?—A. It falls in on the west side of Caviak Island, and about the middle or a little nearer the north end of the island.

Q. Did you go to Chillikoot?—A. No, sir; that is on the eastern side, and then at Karlook the catch often amounts to 150,000 in a day.

Q. What other streams did you go to?—A. We went next to the streams which flow into Uyak River.

Q. Are these salmon valuable in quality?—A. The red salmon from the river are worth on an average \$5 a case. The catch of that river alone is worth about \$1,250,000.

By Senator SQUIRE:

Q. How do they compare with the Columbia salmon?—A. The same species is found there; it is not the same salmon. The large salmon of the Columbia River is found in the Karlook, but not in large numbers; it does not go into the small rivers as a rule; it goes into great rivers. And then we found up in Uyak Bay valuable commercial fish. That is, the canning specials are not found there, we get only the hump-backed salmon which is used for salting. It is valuable for salting, but not for canning, and yet it is the most abundant salmon in the Territory.

Q. Your intention was to secure information for the use of the bureau in regard to the quality and character of the fish and the supply of them. Did you have in connection with that any other scheme or plan with reference to hatcheries?—A. Yes, sir; Mr. Stone went along for the express purpose of looking over the ground to see what facilities for hatching salmon might be found there, and what would be the expense of the establishment, and what would be the probable success of such undertaking, and whether any necessity exists for that work. All of those matters were reported upon and are now embraced in the report to Congress.

Q. How soon will that report be printed?—A. It is in the hands of Congress now, and it has been ordered printed. We went to the south end of the island—the Alitak Bay region—and visited the canneries in operation there, and the streams from which they got their supply, and we found a catch of perhaps 40,000 cases of red salmon in that bay. The streams are all small. We found that had been the catch the last season—about 40,000 cases. The season closed just about the time we arrived there, and of course we saw the fish there, and then, besides that, two of the party made a trip to the Afognak Island, which is the seat of two large canneries, and where the catch this year was brought principally from the Karlook, and they sent their steamers over to Karlook and carried the fish to the canneries on the Afognak until the run of silver salmon began, when they quit the fishery at Karlook and carried on the fishery near the canneries on the Afognak Island. The introduction of steamers into that fishery has revolutionized the salmon business.

By the CHAIRMAN:

Q. Let me read you this resolution and see if you can give us any information upon this subject.

The Chairman read the resolution.

Q. I would say in a general way it has been charged that the present Commissioner has appointed a large number of his relatives, of his family, of his own or his wife's, and that they and some others are favored as against others. Will you state generally whether you have any knowledge upon those points.—A. I was not aware of it. I do know that some of the Commissioner's connections are employed in the Fish Commission.

Q. Can you give their names?—A. Mr. Lewis is one, I believe, but I do not know whether both of them are now employed by the Commission. Robert Lewis I know is a connection of the Commissioner.

Q. And was appointed by him?—A. Yes, sir.

Q. The other Mr. Lewis has he been in the service longer?—A. My impression is that he was appointed by Professor Baird; I am quite sure he was. He has been in the service fully five or six years. A great many of these relatives or connections of the Commissioner were employed by Professor Baird; I mean a large percentage of those who are in the Commission. I really do not know how many. I do not believe that there is any large number.

Q. How many should you say there are at a guess?—A. Well I should think four or five altogether. That is my impression, although I do not know positively. I believe all of them are receiving very small salaries. There have been, as far as I know, very few changes in the Commission except changes by resignation, persons who have gone out to go into some other line of work.

Q. Does your observation there lead you to think that the Commissioner exercises favoritism and partiality toward some employés at the expense of others?—A. No, sir; I never have discovered anything of that kind.

Q. It has been charged that the employés come and go about as they please; that they are not held to hours; that they would be allowed to leave at 3 o'clock, say, and that they come in late, and that they take an hour or so at noon, and that there are no well-enforced rules as to hours of service among the general employés there. What can you say as to that?—A. Well, I do not know anything about that, except with reference to some of those who hold responsible positions. There are a number of the people in the Commission who spend their nights at work in the service without any additional compensation, and my impression is that they are not required to be in their office promptly at 9 o'clock, but that they make up more than the number of hours required in the service.

Q. What is the necessity for this night-work that you speak of?—A. Well, a great deal of confusion has been brought on or has entered into some of the departments of the work through incompetency of the employés. I do not know personally about that, but that is the statement made, and the extra work is necessary in order to get the affairs in a proper shape.

Q. Allow me to ask you this: Are these incompetent employés there now; are they continued in the service?—A. That I do not know about; I think not. Perhaps I ought not to say incompetent persons; they are persons who have done the best they could, but probably were not equal to the task, not willful neglect, because some of those very people might have spent extra hours trying to straighten up matters.

Q. It has been charged here that Commissioner McDonald has invented a filter, which he has had patented, and that he has employed mechanics who are employés of the department in building and perfecting that improvement, which is a private patented affair of his own. Have you any knowledge in regard to that?—A. Nothing except

hearsay. I know that the Commissioner is trying to devise a filter, but what relation it has to his official duties I do not know.

Q. Do you know whether or not one of those filters is in use there now?—A. Yes, sir; I was about to say that the Commissioner now uses for the obtaining of a supply of good water for drinking purposes and also for the hatching purposes and the aquarium purposes; he has now in use one of his own filters, just as a number of other inventions which he has patented are in use by the Government without costing the Government anything.

Q. What are those?—A. His hatching jars, which he invented. I am not sure that he has patented it, but he invented it, at least, for hatching the eggs.

Q. You consider that a valuable invention?—A. Yes, sir; in fact until these jars were invented it was impossible to hatch cod or any other floating eggs.

By Senator SQUIRE:

Q. What is there to prevent his making a claim which would be allowed by the Government for the use of the patent?—A. I believe that he has given the Government the right to use it.

Q. Deeded it to the Government?—A. Yes, sir.

By the CHAIRMAN:

Q. Are you familiar with the fishway which was invented by Mr. McDonald?—A. I have seen models of it.

Q. Do you know whether he has received anything from the Government for the use of that fishway?—A. I do not understand that he has any connection with the fishway company at all.

By Senator SQUIRE:

Q. Do you know whether he does or does not receive anything from the Government for the use of it?—A. I do not know, but I have understood that he does not.

Q. You have understood so?—A. That he does not receive anything for any of his inventions.

By the CHAIRMAN:

Q. The jar, what is known as the McDonald jar, is that an important invention?—A. It is one of the most important inventions that has entered into fish-culture operation.

Q. That is in use now?—A. It is in use all over the United States, and also in many other countries, and recognized everywhere as the most valuable jar for hatching eggs, which will partly float in water, but which need to have an underneath current to float them up.

The CHAIRMAN. To keep them alive.

TESTIMONY OF RICHARD DANA.

RICHARD DANA, being duly sworn and examined, testified as follows:

By Senator SQUIRE:

Q. What is your name?—A. Richard Dana.

Q. Where do you live?—A. I am on duty in Washington.

Q. Are you connected with the Fish Commission?—A. Yes, sir.

Q. In what capacity?—A. I am an expert fish culturist. They move me around from one station to another wherever they need my services.

Q. Where are you now engaged?—A. In Washington, on shad work.

Q. At the Central Station?—A. Yes, sir.

Q. I will read you the resolution under which we are operating.

(Senator Squire read the resolution.)

Q. Do you know any facts on the questions raised in this resolution?—A. None whatever.

Q. Do you know anything in regard to the conduct of the office down here at the Central Station?—A. No, sir; I have only been on duty here since the 15th of April; I have nothing to do with the administration of it. I only look out for the eggs and the young fries.

Q. Do you know anything about the state of the fishes?—A. No, sir.

Q. You have heard the resolution read. Do you know of any favoritism?—A. No, sir; none whatever, except what I have heard through newspaper reports and what is talked around in the office.

Q. Is there any information you can give the committee in relation to this inquiry that would enlighten us?—A. No, sir; except in my own line. There is nothing carried on that was not carried on under the late Professor Baird; just the same men employed.

Q. You do not know of your own knowledge?—A. I do not know of my own knowledge. There are four of us who are rated as fish culturists, who were appointed in 1885 under Professor Baird, and they are still in.

By the CHAIRMAN:

Q. You were appointed by Professor Baird?—A. Yes, sir.

By Senator SQUIRE:

Q. What is your salary?—A. Seventy-five dollars per month.

Q. What are your duties?—A. I have charge of eggs. Eggs are taken at Fort Washington and developed at the Central Station, and I look after them, and as the fries are hatched out they are delivered to a messenger to be sent out and distributed.

Q. Do you get your instructions from the Commissioner's office as to the distribution of eggs?—A. Yes, sir.

Q. What system do you have? Something has been said about tickets. I do not understand it myself. Please explain the *modus operandi*. What instructions do you receive?—A. I have nothing to do with that; that is under the superintendent of Fort Washington, where the eggs are taken. He delivers the tickets to the spawn-takers, and that is all done by the superintendent of the Fort Washington Station, Mr. Worth. He has all disbursements.

Q. You simply distribute the eggs?—A. Yes, sir; in the form of fries, after they have hatched out.

By the CHAIRMAN:

Q. It has been stated here by some witnesses that the general discipline of the office was very lax; that the employés all through the tations practically came and went with a good deal of personal liberty.

By Senator SQUIRE:

Q. You are not stationed there?—A. Yes, sir; I am on the lower floor of the building.

By the CHAIRMAN:

Q. What is your observation as to that?—A. So far as my own work is concerned, I can say that we work over hours. We have to work

Sundays and every other day. I go on duty at 7 and go off at 6, and if anything arises during the night I have to be called up by telephone. These eggs are hatched out at all hours of the day and night, and we have to be there to watch them.

By Senator SQUIRE:

Q. Why do they have to be watched? A. Because they come out of these jars and they go into an aquarium, and if they are too much crowded they commence to die. We put them up in these transportation cans and call for a messenger, and send them out and keep them going out as fast as they are hatched out.

TESTIMONY OF STEPHEN G. WORTH.

STEPHEN G. WORTH, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your full name? A. Stephen G. Worth.

By Senator SQUIRE:

Q. What State are you from?—A. North Carolina.

Q. What was the date of your first appointment?

The WITNESS. In the Fish Commission?

Senator SQUIRE. Yes, sir.

A. I think it was the year 1878.

Q. How long were you in office?—A. During my first appointment about five or six weeks.

Q. How long were you employed as superintendent of fisheries of North Carolina?—A. From about 1878 until 1884.

Q. What was the date of your last appointment in the United States Commission?—A. In April, 1887.

Q. Who appointed you?—A. Professor Baird.

Q. What was your salary, Blue Book of 1887?—A. It was \$60 a month and my traveling expenses, including my board.

Q. What is your present salary?—A. \$1,800 per year.

Q. Does that include anything else?—A. Nothing else.

Q. No perquisites or board?—A. No, sir.

Q. Were you in charge of the Fort Washington station in 1888?—A. Yes, sir.

Q. Who was your clerk?—A. Thomas W. Keller.

Q. Have you a copy of your seine account for that season?—A. I have.

Q. In what capacity were you employed in 1889?—A. I was still superintendent of the Fort Washington Station.

Q. Did you have charge of the seine account?—A. Yes, sir.

Q. Who was your clerk?—A. Thomas W. Keller.

Q. Have you a copy of the seine account for this year?—A. Yes, sir.

Q. Were you in charge of that station in 1890?—A. Yes, sir.

Q. Who was in charge of the seine account that year?—A. I was.

Q. During the time that you were in charge of said station was there any surplus fund at the close of the season?—A. Yes, sir.

Q. How much?—A. During the three seasons of 1888, 1889, and 1890 there was a surplus of \$41.27, I think it was.

Q. Let me inquire into that more carefully. That was for all three seasons?—A. Yes, sir; all three years.

Q. The total amount?—A. Yes, sir; forty-one dollars and some cents.

Q. We have been led to suppose, or rather we have heard testimony, that it was as much as \$40 in one single year?—A. It was. It was \$44 in 1888. In 1889 it was \$24, I think, and this year, over disbursements, amounting, I think, to sufficient, at any rate, to reduce the sum total of cash left over to \$41.

Q. It was forty-four one year and twenty-four another?—A. Yes, sir; and this year I have overpaid about \$29 over and above the receipts.

Q. You have overpaid \$29?—A. Yes, sir; I have.

Q. How recently?—A. The close of the season.

By the CHAIRMAN:

Q. When you speak of overpaid, you mean that you paid out more money than you received from fish sold?—A. I mean to say that when I found that the season did not afford sufficient earnings to pay the expense of the seine, that I called on the disbursing agent of the Fish Commission to meet the deficiency, and asked him for \$112. After disbursing the \$112 I found I had still overpaid something like \$10 or \$12; that I did not ask for quite enough from the disbursing officer. Then I have charged to the seine account this year a bill of \$19.75, which is properly chargeable to the Commission, for meals furnished to the crews of the launch, the machinists, and others, who have been down there frequently and eating at the mess. I was caterer of the mess, and these meals were all charged up, and at the end of the season I charged these meals against the seine fund, which makes a deficiency really this year.

Q. Where did the money come from for these meals?—A. Out of my private pocket and the pockets of the men.

By Senator SQUIRE:

Q. As I understand you, then, you carry this surplus from one year to another as a credit, and you carried over in that way the surplus of 1888 and of the year 1889, for which you have given specific amounts, and during the present year there has been a deficit; there has not been enough money received from the sale of fish to pay the expenses of hauling seines, and that deficiency this year has been charged up against the surplus of these other years?—A. I still have a surplus of \$41. It may be that I will have a few more dollars in my hands to the credit of the seine, because there has been some fish sold this year for which I have not yet collected.

Q. Can you account for this difference this year over the others or against the others; the reason for that deficiency rather than a surplus?—A. Yes, sir.

Q. How?—A. The difference is this, sir; that while we catch, ordinarily, from seven to ten thousand fish, this year we caught only about six thousand shad. We did not make a sufficient catch to pay the expenses.

Q. Now, what disposition do you make of this surplus fund; what has been your habit in regard to this surplus fund?—A. I have reported it to the Commissioner and he has known that I have that surplus, and I have been ready to deposit it or do any thing with it that he might say. But it is a fund which can not properly be turned into the Treasury, as I have been told.

Q. You have reported it to him each year?—A. Yes, sir.

Q. Have you been in the habit any year of paying for any liquors or

wine, or any other luxuries, cigars, etc., out of this surplus?—A. In no respect whatever.

Q. You never have done that?—A. Never have done that.

Q. You have never taken a dollar of that money?—A. No, sir.

Q. In 1888, 1889, or 1890?—A. No, sir.

Q. Do you know how this impression got out that this fund was being used for buying luxuries?—A. I think I do.

Q. How then?—A. It got out through Mr. Keller, my record clerk. Late last summer I learned that he had told employés of the Central Station that I had used the public funds for my own purposes.

Q. Is he still in your employ?—A. He is not in my employ. He is in the Commission.

Q. Have you had any difficulty with him?—A. No, sir. I have had no difficulty with him. Of course I have had my own feelings in regard to the matter.

By the CHAIRMAN:

Q. Was he transferred from that station at your request?—A. I think he was, sir, in the first instance.

By Senator SQUIRE:

Q. You have these \$41 on hand now?—A. I am able to produce the \$41.

Q. That is all the money there is as the result of this business?—A. The entire credit, and I have vouchers to show the disbursements of the fund.

Q. Of the fund?—A. Yes, sir.

Q. In what form; receipts taken from seine-haulers?—A. Receipts taken, and in almost every instance witnessed.

Q. Can you state in round numbers how much you pay the seine-haulers each year?—A. I have a statement prepared over at the Fish Commission building showing exactly.

By the CHAIRMAN:

Q. Will you furnish that?—A. I will, sir. I have a statement of it, and then I have all the original papers, receipts for money, etc., and all the invoices or returns from dealers who have sold fish for us.

By Senator SQUIRE:

Q. Who has charge of the Government reservation at Fort Washington?—A. Sergeant Joyce.

Q. Do you know of any intoxicating liquors being used there?

The WITNESS. Do I know of any?

Senator SQUIRE. Yes, sir.

A. They are not allowed to be sold there.

Q. The question is "used?"—A. Yes, sir; I have used whisky there myself in my family.

Q. Have you known it to be used by others than yourself?—A. I have heard Mr. Keller say that he took a drink every morning.

Q. Have you ever seen or heard of any employé being under the influence of liquor at that station?—A. I have had two reports of that sort concerning the same man.

Q. Who was he?—A. His name was Lynch, a machinist, who was employed as an engineer on the steam-launch.

Q. Is he there yet?—A. No, sir.

Q. Did you report his irregularity?—A. I made no official report, but I reprimanded him.

Q. Were you expected to make reports of irregularities of that kind to the Commission?—A. If it had amounted to anything serious, so as to derange the work, I would have done so.

Q. That is the only case?—A. Yes, sir.

Q. Twice?—A. Yes, sir; I understand twice. In one instance I investigated and found it was stoutly denied by the coxswain of the launch, who was a strictly temperate man.

Q. Do you know of any meals being furnished to any outside parties at that station?—A. Yes, sir.

Q. Who furnished them?—A. I furnished them.

Q. Who furnished the supplies?—A. I did myself, and the Commission. Commissioner McDonald also furnished meals there. Mr. Keller, the record clerk, had company there, and he furnished them out of his own mess.

Q. Were the things prepared by persons paid by the Government or by private servants?—A. They had been prepared exclusively by servants privately employed until this season; there has been a slight exception. I had difficulty this season in procuring a servant for my own family, and I had the Fish Commission cook prepare the meals for my family, and I shared in the mess with the men, paying my pro rata for myself and family. I paid for three and a half persons in the mess.

Q. For the materials used?—A. For the materials used.

Q. You could not make any arrangement to pay anything for servant's hire of course; could you?—A. I paid the servant myself \$10 out of my own pocket.

Q. Extra?—A. Yes, sir.

Q. Beyond the amount allowed by the Government?—A. Yes, sir. And it was customary before I went on the shore for the mess cook to cook for all the employés—the record clerk and the persons in charge. This year when Colonel McDonald has taken parties there he has carried his own servants, I believe, in almost every instance.

Q. Was any pay taken for these meals furnished to private parties at that station?—A. No, sir.

By the CHAIRMAN:

Q. I thought you stated a moment ago that pay had been taken for meals that were furnished to outside visitors?—A. No, sir.

By Senator SQUIRE:

Q. Was a photographic outfit used at this station?—A. Yes, sir.

Q. To whom did it belong?—A. To the Government.

Q. Were copies of pictures taken ever sold?—A. I think one single picture was sold.

Q. By whom?—A. By myself.

Q. Was that the only instance of that kind?—A. Yes, sir; only that instance. I beg to correct myself. I furnished Sergeant Joyce one or two pictures for himself. Not exceeding a half a dozen prints, all told, have been sold there. For one of these prints I received—owing to a lack of change I sent and got the money through the mails; a man sent a dollar and I charged him 75 cents. Those furnished Joyce I think I gave to him at 25 cents each, which is about actual cost.

Q. Then there has not been much received from the sale of photographs?—A. Not exceeding \$1.75 or \$2.

Q. How much?—A. Not over \$2.

Q. Altogether?—A. Yes, sir. I furnished the plates myself.

Q. You furnished the plates?—A. Yes, sir; and paid for having them—

Q. You received the money for the pictures?—A. Yes, sir.

Q. And you furnished the plates?—A. Yes, sir; and paid for having the prints printed by professionals in the city.

By the CHAIRMAN:

Q. You used the Government instrument?—A. Yes, sir; merely to take the pictures; to make a few pictures of my family, Sergeant Joyce, and Mr. Keller and his wife and child.

By Senator SQUIRE:

Q. What is the purpose of this photographic outfit there on behalf of the Government, that is, what official use had been made of it?—A. It is to illustrate the methods of the Government Fish Commission station, and to illustrate the modes of fishing on the Potomac River as conducted by the fishermen. Views of that sort are in the collection of the Fish Commission and the National Museum. This year I have made two dozen views of similar subjects.

Q. As I understand you there have been only \$2 received by you from the sale of photographs?—A. Yes, sir.

Q. A few pictures. You furnished the plates?—A. I furnished the plates and paid for the printing in this city. They cost me then 25 cents each print to print.

Q. Were fish ever sold to men employed?—A. I believe I did furnish Keller a few pictures. I will say that I have not received over \$5.

Q. You desire to correct your testimony and say \$5?—A. Yes, I remember I furnished him some.

Q. Were fish ever sold to men employed?—A. Yes, sir.

Q. Any quantity?—A. No, sir. To some of the seine crew. They are employés, of course. I think the largest amount I ever sold to one was \$12.

By the CHAIRMAN:

Q. Did you treat that money the same as you did the money received from fish sent to market?—A. I did, sir. It is in the account, each item.

By Senator SQUIRE:

Q. Did you ever give your personal note to L. G. Haron for services rendered at the station?—A. I gave him last year a due-bill, not a note, for some \$20 or \$30. I gave him a due-bill for \$20 or \$30.

Q. For services rendered at the station?—A. It was outstanding about ten or twelve days. When I left there, for some unaccountable reason, I was way behind. I took \$100 of my own money to pay up. Whether I lost the money, or whether it was stolen, I do not know.

By the CHAIRMAN:

Q. You gave him this due-bill in settlement for services?—A. Yes, sir.

Q. Did you give him the due-bill because you were not in funds from the sale of fish, or other sources, to pay him?—A. That is it.

Q. And when you were in funds you took up the due-bill and charged it as though you had paid him at the time?—A. No, sir; the date is given there when I took up the due-bill.

By Senator SQUIRES.

Q. You have paid him?—A. Yes, sir. You understand, Mr. Chairman, that I disburse money for the Commission for small items, wash

bills, and things of that kind, and often I am outstanding \$50 or \$60, which it takes me some time to collect after the season is over.

Q. Did you not transfer the name of Benjamin Montgomery to the spawn-taking rolls, still retaining him as a handler of fish?—A. Well, he has been on that roll—on the Fish Commission roll. He has been there handling fish two years now and in training as an apprentice spawn-taker, and has become a professional spawn-taker, so that next year, if we live, he will be rated as a spawn-taker at \$55 instead of \$45.

Q. Did you transfer his name?—A. I do not remember; but I should not doubt that I did.

Q. Would you answer that “yes”?—A. I do not remember; but he was on the spawn-taker’s roll last year.

Q. Was he still retained as a handler of fish?—A. Yes, sir.

Q. Did he get pay in two capacities?—A. No, sir.

Q. In which one did he get pay?—A. As a spawn-taker, on the pay-rolls.

Q. And not as a handler of fish?—A. No, sir.

By the CHAIRMAN:

Q. Is the pay of a spawn-taker more than the pay of a handler?—A. I put him on as a fish-handler at the regular rate when we put on young men. He assisted in spawn-taking every day during the season.

Q. That gave him more pay than he otherwise would have had?—A. No, sir.

Q. Is there any difference in the pay of a spawn-taker and that of a handler?—A. Well, I never give a man less than \$45 a month who is learning to take spawn, and I consider him as in training in that capacity to become a spawn-taker.

Q. He did not draw double pay?—A. No, sir.

By Senator SQUIRE:

Q. Was a voucher made by the Government for his salary?—A. Yes, sir; he was paid out of the appropriation.

Q. Was not his salary really paid from the seine account?—A. It was not, sir. I do not think he was paid out of the seine account; but I have complete statements to show.

By the CHAIRMAN:

Q. If he was paid out of the seine account he was not paid on a Government voucher?—A. That is it.

By Senator SQUIRE:

Q. Have you ever used the Government team for the transportation of your personal property, household goods?—A. Yes, sir; paying the driver always for his work.

Q. Was the launch *Blue Wing* ever used for private expeditions?—A. It has never been used for private expeditions where I had anything to do with it.

Q. “It has never been used for private expeditions where I had anything to do with it?”—A. Yes, sir.

Q. While at Fort Washington did you have any sheets and pillow-cases made?—A. I think I had no new sheets or pillow-cases made, but I had some single sheets sewed together to make double sheets, to make them wider.

Q. What was the cost of making?—A. No cost at all.

Q. What was the name of the maker?—A. My wife did the work, and no charge was made; no compensation given.

Q. Were you ever under the influence of liquor while on duty at Fort Washington?—A. Well, I have heard it charged that I was.

Q. You were not conscious of it at the time?—A. No, sir. There was one occasion when I think perhaps I might have been misjudged by my critics. I had come to Washington, being out all night long on the steam-launch, conveying to market thousands of herring. We were unable to get our boat to take them up.

Q. When was that?—A. That was last year, sir.

Q. What month?—A. I think it was April; I am not sure I could tell.

Q. You came back to Fort Washington after this trip?—A. I was up the entire night coming here and transacted a half-day's business. A heavy rain-storm came up and I bought a rain coat, so that I can tell the date. I got back home exhausted and wet, and I went ashore, found everything was all right, walked up the hill; my family had gone that day on some little trip, and I laid down and went to sleep, as any man would have done. I was not unfitted for business; I was clear-headed. That is the only occasion when I think I could have been accused of being under the influence of liquor at that station.

Q. Do you remember ordering the men to go down the river that day.—A. Yes, sir.

Q. Do you think that was the proper thing to do, knowing that they had been exposed all night and been up since the previous night?—A. I have seen such things done in the Commission very often. I often had that to do. I have worked two nights and days on the Commission.

Q. Was it not a dangerous thing?—A. Not when they were willing to go. There was no objection made.

By the CHAIRMAN:

Q. What did these men go down the river for?—A. They went on the regular business.

Q. What was that?—A. Collecting eggs.

Q. It was important that they should go and secure the eggs?—A. It was.

Q. So that you sent them, although they had been up all night.—A. Yes, sir; those seine proprietors furnished us eggs every day, and if we did not take them away from them it created a great deal of feeling on their part, and for that reason it was necessary for those men to undergo a little additional hardship.

Q. Did you allow them any extra pay—any extra compensation?—A. No, sir.

By Senator SQUIRE:

Q. What is your politics?—A. I am a Democrat.

Q. Were you ever instructed by the Commissioner to prepare the necessary plant for the shipment of shad to Germany?—A. I was.

Q. Have you a copy of the letter of instructions?—A. Not with me.

Q. Was there not a combined feed and air pump purchased, besides a quantity of material, costing several hundred dollars, preparatory to this shipment?—A. Yes, sir.

Q. State how much labor and material were furnished for this work, and about the cost of the same?—A. Not exceeding \$250. I did not purchase the pump, so I do not remember exactly what it cost.

Q. Were any steps taken to procure transportation for yourself, party, and outfit, on the German steamer?

The WITNESS. Transportation for myself and outfit?

Senator SQUIRE. Yes, sir.

A. Yes, sir.

Q. Were arrangements made with a German line of steamers permitting you to place this plant aboard their steamer and make necessary water connections, etc.?—A. The Commissioner sent Mr. W. B. Bailey to New York City to see the agents of this line to make the arrangements for this foreign shipment, and he saw the agents in New York.

Q. Did they ever consent to your taking this outfit and shipment of shad?—A. The matter was referred to the German office of the company, and our trip was refused.

Q. They refused to take the shipment?—A. Yes, sir.

Q. Was this before or after you had purchased and prepared the plant?

The WITNESS. When we got their final answer?

Senator SQUIRE. Yes.

A. That was after we had purchased the plant. There is a particular time of the year when we have to make shipments. If we do not make it early in the shad season we can not make it, practically.

Q. Why did they not take it?—A. I did not see the correspondence. We had a day fixed—the 30th of May—and we worked hard to get ready by that day.

By the CHAIRMAN:

Q. You went to work and got up this plant before the Department was sure that the steamer would take it?—A. Yes, sir.

Q. And the steamer refused to take it?—A. Yes, sir.

By Senator SQUIRE:

Q. You spoke about the fact that other men had been in the habit of using liquor, ardent spirits. You mentioned several names; Clerk Keller was one, and there was some other man, I have forgotten now who.—A. Sergeant Joyce.

Q. I would like to know whether this practice of drinking prevails there generally?—A. Not at all.

Q. Whether men take liquor there?—A. Not at all.

Q. Is it considered a necessary concomitant of fishing?—A. No, sir; it is used in the family in a strictly medicinal manner, not for treating persons who come there at all.

By the CHAIRMAN:

Q. Does the Government furnish the whisky?—A. No, sir.

By Senator SQUIRE:

Q. Is the whisky paid for out of the proceeds of the fish sold?—A. No, sir.

By the CHAIRMAN:

Q. It is purely a personal matter?—A. Yes, sir.

By Senator SQUIRE:

Q. Have any of these entertainments ever been paid for out of the proceeds of the fish sold?—A. No, sir.

Q. Whether given to members of Congress or anybody else?—A. Not at all.

Q. It is all personal and private?—A. Yes, sir; borne by Colonel McDonald and myself.

Q. These men you speak of, have you ever known of their being incapacitated for service by reason of indulgence in drink?—A. No, sir.

Now, as regards the trip that I mentioned to you awhile ago, I was informed that when I sent the launch down the river the engineer fell asleep sitting up. He just nodded in his seat.

Q. Was that from the use of liquor?—A. No, sir; from the loss of an entire night's sleep and doing double duty.

Q. Do you know whether he drank any at all?—A. I know he drank some.

Q. During that trip?—A. Yes, sir.

Q. Was it the custom to drink considerably when they were out at nights?—A. No, sir; that was the exception. We had been out to Washington on this extra trip at night.

Q. Have you ever taken other extra trips?—A. Yes, sir.

Q. Do you customarily use whisky on those trips?—A. Never except on that trip, and I furnished that myself. I bought a pint bottle of whisky when I left the city and told them; we were all wet and it had been raining, and a man was aboard by the name of Harris, Lynch, the engineer, and myself.

By the CHAIRMAN:

Q. A pint?—A. A pint or a half pint.

By Senator SQUIRE:

Q. Then the only question that arises there is, that if there had been any accident might you not have been blamed; might not the Commission have been blamed for allowing the use of whisky even under those circumstances?—A. I think not. We did not use it immoderately at all. It was only when wet and soaked with rain.

Q. What did you do when you returned from Washington?—A. I remained there at my post. I was not in the habit of going down the river, except occasionally to overlook the ground. Those men went on their regular trip.

Q. You had no occasion to remain on duty during the day?—A. No sir; none at all. My work is all classified and done methodically.

Q. Do you not think it is for the interest of the Government that liquor should not be used?—A. Yes, sir; I have discouraged it, and there has been greater sobriety on that hill since I have been there, I suppose, than was ever known before. I can bring in credible witnesses to demonstrate that whisky is not used there as a beverage at all.

Q. These men, especially this clerk that you speak of, said they took it every day.—A. That is his own business. I have heard him say that.

By the CHAIRMAN:

Q. Did you or any of your family ever take pay or dinners from any one other than Government employés?—A. If so, it was a solitary case where some wayfarer had gotten left there. I think, though, that as a rule that whenever that has happened we have furnished them their meals. I have allowed, perhaps, in all my running of the business there, a dozen visitors meals there, all told, in three years, and more than half of that number was in the mess of the Fish Commission, and what little was collected for it was credited up to the mess account.

Q. So that whatever amount was received for meals was credited to the mess account?—A. Yes, sir.

Q. Did you ever promise to give Mr. Keller \$50 of the seine money in 1889?—A. I did, sir. I offered to recommend it and if the Commissioner approved it to turn it over to him.

Q. Was it paid to him?—A. No, sir.

Q. The Commissioner did not approve it.—A. Mr. Keller would not allow me to ask for it. He wanted his salary raised and he said he would not have \$50. He scorned the idea, and I tried twice to get him to do it, because I told him \$50 would give him \$25 in May and June.

Q. You thought he was entitled to it?—A. I told him that if the Commissioner was willing I was, and when the 1st of July came if he was raised in salary——

Q. But he declined to receive it?—A. Yes, sir.

Q. Did you ever make a requisition for any repairs to the building at Fort Washington?—A. Yes, sir; I think so. I put repairs on the building.

Q. You think you made a requisition?—A. I think so.

Q. Did you have any seine money in your hands at that time? At the time you made the requisition for repairs did you have any seine money on hand, is the question?—A. I have had seine money in my hands ever since 1888.

Q. Most of the time?—A. Yes, sir.

Q. Ought you not have to paid for these repairs out of the seine money?—A. I have paid for repairs on the Fish Commission building out of the seine fund.

Q. And rendered a statement?—A. Yes, sir: this is the seine account. I should like to make a statement. Whenever this seine business has made more than it took to pay its expenses it has been the precedent before and since I have been there to give the seine captain a dollar a day extra for the season. It has also been customary to give one of the crew who handled the fish an extra \$10. It has also been customary to give the record clerk \$10, and when I reported this balance to the Commissioner, and if he did not order me to turn it over, I did not feel that I was called upon to turn it over.

By Senator SQUIRE:

Q. Did he ever tell you to appropriate any portion of it to yourself?—A. No, sir.

By the CHAIRMAN:

Q. So you hold yourself responsible for the balance?—A. Yes, sir.

By Senator SQUIRE:

Q. Did you pay this captain and the others who have been receiving heretofore these extra sums at the close of the seasons of work the extra amounts you have specified or any other person of that sort this year?—A. They have not been paid. There was not enough. But if I am ordered to do it I will pay over the \$41. But it is not considered that we are obliged to pay it, as there is no obligation.

At 2 o'clock and 15 minutes p. m. the committee adjourned until Tuesday, June 17, at 10 o'clock a. m.

WASHINGTON, D. C., *June 17, 1890.*

The subcommittee met at 10 o'clock a. m. pursuant to adjournment. Present, Senators Stockbridge (chairman) and Blodgett.

TESTIMONY OF SETH MITCHELL ACKLEY.

SETH MITCHELL ACKLEY, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your full name?—A. Seth Mitchell Ackley.

Q. Your residence is in Washington?—A. Yes, sir.

Q. Are you connected with the Fish Commission Service in any way?—A. No, sir. I am on duty in the Coast Survey, another branch of the service.

The chairman read the resolution authorizing the investigation.

The CHAIRMAN. Now, the committee has no knowledge as to the particular points you are supposed to know. Please go on in your own way and give us whatever information you have.

The WITNESS. I know hardly anything about it. I only returned to the United States from a foreign cruise last October, and I have seen nobody or have had no connection or conversation with anybody in connection with the Fish Commission.

By the CHAIRMAN:

Q. There have been published, as you possibly may know, in the New York Press several articles attacking the Commissioner and his administration of the office. We are sort of groping in the dark. We requested the parties whom we supposed to be responsible for the articles to furnish the names of any persons whom they supposed we could get any information from. We wish you would go ahead and give us whatever information you can.—A. Four years ago a friend of mine, Lieutenant Wood, of the Navy, had command of a vessel, and he had some conversation with Major Furguson, who was the assistant commissioner, which resulted in Major Furguson publishing an article in the Baltimore Sun, in which he referred to Lieutenant Wood as a paltry lieutenant. I suppose that is the ground for it.

Q. That was some time ago?—A. Yes, sir; under Professor Baird's administration.

Q. I have a few questions to ask you. What do you know of the use of the Havre de Grace Station as a private shooting grounds; has it not also been used as a rendezvous for Democratic bosses, and have not repeaters been harbored there for days previous to the Presidential elections of 1884 and 1888?—A. I have no knowledge of those subjects.

Q. What do you know of junketing trips on Fish Commission boats at Government expense?—A. What I could tell you about that would be entirely hearsay evidence. I do not know whether you admit that. It would not be admitted in a court-martial. Lieutenant Max Wood—I think the clerk showed me a subpoena for him yesterday—was in command of this very vessel, and he can give you the whole thing, because he was in command of the vessel.

Q. What was the name of the vessel?—A. It was a yacht, which belonged to Major Furguson, and when he went out of service it was turned over to him. Max Wood commanded her for two years, and it was on account of Major Furguson sending him an order to get ready

to go on a pleasure trip that he had this trouble. Major Furguson was a civil employé with no authority of law. His position was not given him by law, and therefore when he wrote an order to Wood, Wood declined to acknowledge it. A year afterward he had tacked on to the appropriation bill a paragraph creating the office of assistant commissioner of fisheries. But before that time he was simply one of the employés taken on by Professor Baird without any officially authorized position.

Q. Do you regard Mr. McDonald as a scientist?—A. I really do not know anything about him, except I have heard him spoken of as really the practical working man of the Fish Commission.

Q. State instances of abuse under the Commission of which you have any knowledge?—A. The instances I know are things that came to me from hearsay, from my friends, and I believe they occurred four or five years ago.

Q. Under the present administration?—A. No, sir. I have not heard a word against the present Commissioner. On the contrary, I have been told by one or two men since I came home last summer that things were changed for the better since the old Commissioner went out.

TESTIMONY OF PHILIP T. YEATMAN.

PHILIP T. YEATMAN, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your full name?—A. Philip T. Yeatman.

Q. Where is your residence?—A. Alexandria, Va.

Q. Are you connected in any way with the U. S. Fish Commission?—A. Yes, sir.

Q. What position do you occupy?—A. At this time I am clerk in the superintendent's office.

Q. In the Central Station?—A. The Central Station.

Q. How long have you been in the employ of the Commission?—A. I commenced temporarily in 1885, for three or four months in the year.

The chairman read the resolution authorizing the investigation.

By the CHAIRMAN:

Q. That is the scope of your inquiry. Now, Mr. Yeatmann, your name was given to us by parties who had connection with the various newspaper articles. Have you seen certain articles published in the New York Press and other papers?—A. Yes, sir.

Q. We requested those parties to give us the names of any witnesses who they thought knew anything about those charges. Can you give us any information in regard to those charges which were made in the Press?—A. Only as to those referring to myself.

Q. Give us in your own way any information bearing upon this subject.—A. Well, I think the first charge was that I was a relative of the Commissioner's wife——

Q. Are you one of the relatives?—A. Which is untrue.

Q. You are not connected in any way whatever?—A. No, sir.

Q. With either the Commissioner or his wife or his family?—A. No, sir.

Q. Do you know how many employés of the Department have been appointed by the present Commissioner who are relatives of his or of

his wife or his family?—A. I do not think there is a single relative of his.

Q. Of his wife's?—A. There is one young man who is, I think a nephew.

Q. What is his name?—A. Mr. McCormick.

Q. Do you know Mr. Lewis, who is in the office?—A. Yes, sir.

Q. Is he not a relative also?—A. Lewis' brother, who is now dead, married a niece of Mrs. McDonald.

Q. Well, it is charged that there is favoritism there; that the Commissioner favors certain favorites, as to service and compensation. Have you any information upon that point?—A. I can only give you my impression, sir.

Q. Well, what is that?—A. I do not think there is. I do not think I have ever known a man to leave the Commission earlier than 4 o'clock. I always leave at half past 4 for the reason that I have to take the cars at that hour. I can not get off any sooner. There is a difference in compensation.

Q. An unfair difference? Of course we understand that different employés occupy different positions?—A. I think not. I do not know of anybody who receives less than I do myself. My own compensation is sixty dollars per month, and I believe that is about the lowest rate.

Q. You are employed in the superintendent's office?—A. I have been for nearly a year, but I have done general work.

Q. One witness who was before us stated that there seemed to be an entire lack of rules and system and business-like methods there, and that employés came about when they pleased and left about when they pleased. What can you say on the subject?—A. I do not think it is so right around me. There are only three or four there, and they are all prompt. I get there at half past eight. I am obliged to get there at that hour. And they are all there. They are laborers.

Q. Do you happen to know anything about the system of handling money which is derived from the sale of fish down at the Fort Washington Station?—A. I do not. I never had any occasion of seeing or knowing. I have been at Fort Washington as a messenger, but only for about three hours, bringing up fish.

By Senator BLODGETT:

Q. By whom were you first appointed?—A. I can hardly determine. In 1885, after two years of illness, I was in distress. I had been brought up on the water, and about fish, and I made application to Colonel McDonald. Now up to that time I had never laid eyes on him but once. I knew who he was.

By the CHAIRMAN:

Q. Was he the Commissioner at that time?—A. No, sir. His position was superintendent of distribution. Well, I met with no encouragement, but I brought all sorts of influences to bear upon Professor Baird, my Congressman, etc. I was very persistent; I needed it. After a while I received a summons, and was put in the office of the chief clerk to get up some records. That was my first employment, and I was employed about two months.

Q. Was that while Professor Baird was Commissioner?—A. Yes, sir; October and November, 1885.

Q. Do you know of anything to criticise in the management of the Commission?—A. I do not think I am capable of doing it. Everything has been perfectly orderly. I never saw any willfulness or insubordina-

tion or anything. There are a good many young men, and off duty they act like children. They have their little squabbles, but they do not interfere with their work. It is something that men of your age and of my age would not relish, but it would not come within the purview of the Commission. They are just like children in school. My own chief, Mr. Wolf, is a rigid disciplinarian himself. He does not stand any foolishness. He is a man of energy and considerable executive ability.

TESTIMONY OF W. B. BAYLEY.

W. B. BAYLEY, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your full name?—A. W. B. Bayley.

Q. Where is your residence?—A. Well, I am an officer in the Navy. I am on duty here at present; this is my official residence, Washington, I suppose.

Q. Are you in the employ of or connected with the United States Fish Commission?—A. Yes, sir, I am detailed for duty. I am an engineer officer of the Navy, and I am detailed to duty in the Fish Commission.

Q. What are your duties?—A. I have charge of all the machinery, the water distributing plants, and boilers, pumps, steam-launches, and also the men of the Navy connected with the Commission. We have twenty-one enlisted men in the Navy connected with the Commission on special duty. I have charge of them, also the machinery, the repairs at different stations and buildings, erecting new plants, etc.

Q. Is there a boat on the Potomac called the *Blue Wing* belonging to the Commission?—A. Yes, sir.

Q. Do you know whether persons, other than United States Senators, or Representatives, or employes of the Fish Commission, have taken trips on this boat to Fort Washington?—A. I believe that they have on the boat on her trip to Fort Washington, not for the special purpose of taking these people, but in going to the fort on duty they have taken a number of people, I understand.

Q. Not going on purpose?—A. Not on purpose.

Q. There have been certain articles published in the newspapers of late criticising the management of the Fish Commission?—A. I have seen them.

Q. And this investigation the Fish Commissioner requested to be ordered. The investigation is in pursuance of that request and was occasioned by these articles that were published in the papers. Have you read some of those articles?—A. I have; yes, sir.

Q. And among the charges, as you remember, was one that there was a great deal of nepotism; that the Commissioner had appointed quite a list of relatives of his family, or his wife, etc.?—A. Yes, sir.

Q. Will you tell us if you know anything about that?—A. Since these charges were published in the papers of course there has been more or less talk, and I have heard them brought up and the question discussed, and it was said that there were only two connections of Colonel McDonald's in the Commission, and they were holding very subordinate positions.

Q. Will you give us the names?—A. I think one is young Lewis, now the other, I do not remember what his name is.

Q. Is it McCormick?—A. I do not know; if there is one, he is holding a very subordinate position. I was never brought in contact with the people in the fish culture division. My duties are separate and distinct from them. There are a great many I do not know. I have been told that there are two, and this young man Lewis I know of. I really do not know him by sight, but I am told that these two are connected with Colonel McDonald.

Q. Do you know anything about favoritism in the management of the Commission? Have you observed that the Commissioner has certain favorites who can do almost anything, and others whom he does not care much about?—A. I do not think so.

Q. That has been charged generally.—A. I have never seen anything of that kind, and I do not think there is, because Colonel McDonald has always struck me as being a very conscientious man, and particularly so in his duties; and he would be the last to show favoritism.

Q. Do you know anything about employes of the Commission being under the influence of liquor at Fort Washington?—A. It would be pretty hard to prove that by me. I never saw a drop of liquor there in my life.

Q. Do you know whether Mr. Gay is a competent man, and whether money was wasted by him and Mr. McDonald at Put-in-Bay, and that the building was hurt in appearance by the lowering of the same, and that Gay was responsible for it?—A. Well, now, that perhaps would be simply a question of opinion. So far as I was concerned, I was placed in charge of the construction of that station. I have my orders here, if you care to see them—written orders from Colonel McDonald. What is meant by that is this: I was away on leave last fall, and while I was away (when I returned the chief clerk told me) the Commissioner had been called to Put-in-Bay, and I learned that Mr. Gay, who was inspector of stations, had requested the colonel to go there, and that, in his opinion, the building should be lowered.

By Senator BLODGETT:

Q. What connection had Mr. Gay with the Fish Commission?—A. He was inspector of stations. It was at his suggestion and recommendation that this was done. When I returned the Commissioner told me that he had authorized this, and he said, "You had better go out there at once and see about it." So I went out there, and according to my idea there was no necessity for this; and I thought it was rot, involving a great deal of expense, and I thought it was unnecessary to lower the building. I thought, perhaps, it would injure the appearance of the building, and besides, to overcome the grade, it would be easier to raise the wharf or lengthen the incline ways up to the floor so as to make the grade easier. That was simply a matter of opinion. The work had been authorized in the mean time, so that it was too late. That is what is meant. That is simply a matter of opinion. Mr. Gay thought it was better to lower the building. That was the whole thing.

Q. And Colonel McDonald authorized it?—A. Yes, sir; and when I returned from leave and took charge again it was too late. The work had been authorized and commenced.

Q. What do you know about a large outlay being made for pumps, tanks, etc., to carry shad over to Germany before a satisfactory arrangement was made with the steam-ship company?—A. I know all about that. The Commissioner ordered me, on my way to Wood's Holl, to stop in New York and confer with this steam-ship company, the German-American Packet Company. I went there. They told me that they would

let me know; that they would have to confer with their superintendent. I went to Wood's Holl and came back, and then they told me the question was such an important one that they would have to refer it to the head office, Hamburg; that they would know in two weeks. That was about the time it should be shipped, because they could not wait after June. Then it is impossible to get the eggs. So that it was necessary to have the apparatus ready by the time we got the decision. I bought the pump of Knowles. I had the apparatus put together here in Washington, so as to be ready when we received a permit, for the supposition was that there would be no difficulty about that, because the Dutch Government had requested it. It is a question they have been interested in for several years. The experiment was made once before, and failed, and this was to be an entirely new apparatus; and it was supposed, as they were interested in the question and had expressed themselves so, that there would not be the slightest objection to shipping it. But to our surprise word came from the company that they were afraid it would occupy so much space that they could not ship it. We could not have done anything else, because, even if we would have gotten permission, we would not have had time to get ready. We had an air-pump, a circulating pump, and the whole apparatus was boxed together in a very compact way.

Q. How much did it cost?—A. The pump cost \$209; the tanks and boxes, about \$70. I did not make that, so that the whole apparatus cost less than \$300.

Another point is, it is not thrown away, as has been stated, but is ready for use next season, and it is proposed to get a permit for some means of transportation and we will then be ready for shipment.

Q. Would it not have been wiser to have applied earlier and to have learned whether you could have made the shipment or not before the expenditure was made?—A. Well, possibly it would; but there was very good reason to believe that there would be no trouble in shipping it. It was not an apparatus that would have given them any trouble, for we proposed to send two men. All this expense was to have been refunded by the Dutch commission, so that the Fish Commission was not to have paid for it, and probably it will be paid for now when the fish are shipped.

Q. At present the Department is out?—A. Yes, sir; it is proposed next spring to ship it. As I understand, ever since 1884 they have been trying to get these eggs introduced, but one thing and another has interfered.

Q. Will you state as to whether a boat was bought in the New York market without public advertisement, whether that boat was a second-hand one, and whether several hundreds of dollars had to be expended on the same by the Fish Commission in alterations? Please state just what you know about that.—A. I was ordered to do that; I saw that in the paper, and so I anticipated it. If you will allow me, I have got the report which I made to the Commissioner. When I have been away on duty, involving any expense, I have been in the habit of making a report. This is my written report on the subject, and covers the whole ground. Shall I read it?

Senator BLODGETT. I think the witness had better read the report.

The WITNESS. I will do so. It is as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., June 5, 1890.

SIR: I have the honor to submit the following report in relation to the recent purchase of the steam-launch *Petrel* (late *Wavie*), on my recommendation, for the use of the Commission of Fish and Fisheries.

About the middle of March you instructed me to take immediate steps towards procuring a suitable steam-launch, to be used for the spring shad-hatching work on the Delaware River, and later in the summer to be used on Long Island Sound in the prosecution of the work in connection with the United States Coast Survey of the investigations of the ravages of the star-fish on the oyster beds in those waters. For this work it was deemed necessary that the boat should have about the following dimensions: Length 50 to 60 feet, beam 9 to 12 feet, draught 4 to 6 feet. It was thought best to purchase the boat in open market, as time would not permit the advertising for bids for the construction of a suitable boat, three months being the probable shortest time a boat of the size required can be built.

Section 3709, public contracts, Revised Statutes, of the United States, reads—

“When immediate delivery or performance is required by the public exigency, the articles or service required may be procured by open purchase or contract, at the places and in the manner in which such articles are usually bought and sold, or such services engaged, between individuals.”

You also informed me that the limit which could be allowed for the purchase of the boat was \$4,000. With these instructions in view I communicated with several of the leading yacht and steam-launch agencies in New York, and was soon in possession of full particulars of more than two hundred steam-boats which were offered for sale. Selecting from the lists a number of those coming nearest our requirement, I visited New York and Brooklyn and inspected them all very carefully. I found two of the large number offered us, in point of size, general appearance, machinery, and internal arrangements, to answer very nearly our requirements. Neither of the two could be bought for less than \$6,000, however, having cost their owners from \$7,000 to \$8,000.

Later the steam-yacht *Wavie*, T. S. Kennedy, 716 East Thirteenth street, New York, was offered the Commission for the sum of \$3,600. Upon a careful inspection of the boat, and after a steam-trial in which I had a good opportunity of testing her speed, sea-worthiness, and steering qualities, there being a strong sea in the bay at the time, I was convinced the boat was the best I could find, coming within the limit fixed by you, \$4,000. I therefore recommended the offer of \$3,400 for the boat, which was made and accepted.

With few exceptions boats of this size are built for service in fresh water, that is, they are not provided with tanks containing fresh water to be used in the boiler, and the metal work under water, condenser, screw propeller, rudder, etc., are of iron, which in salt water soon becomes weakened and is liable in time to destruction from oxidation. As the boat would be used in the waters of Long Island Sound and the vicinity of Wood's Holl, I recommended that the iron work be replaced by composition costing approximately, \$600. When these changes are completed the boat will have cost, in round numbers, \$4,000.

The boat, engine, and boiler were built in 1889, and are therefore practically new. I exercised unusual care in selecting the boat, and having a large number to select from I feel that I can safely testify that the Commission has procured a staunch and efficient steamer for a moderate price.

Very respectfully,

W. B. BAYLEY,
Passed Assistant Engineer, U. S. Navy,
On duty in the Fish Commission.

Col. M. McDONALD,
U. S. Commissioner of Fish and Fisheries, Washington, D. C.

By the CHAIRMAN:

Q. State the number and names of officers and enlisted men in the Navy who are assigned to duty in the Fish Commission.—A. There are twenty-one enlisted men. I am the only officer, except on the two vessels. There are two vessels; one is on special duty in the Pacific—the *Albatross*, and the other, the *Fish Hawk*, is a smaller vessel. They are manned by officers of the Navy.

Q. Detailed for that service?—A. Yes, sir; the officers are a class of officers called mates; they are not graduates of the Academy.

Q. How many vessels and launches are there belonging to the Commission?—A. There are two large steamers, as I say.

Q. The *Albatross* and the *Fish Hawk*?—A. Yes, sir; we have altogether seven steam launches.

Q. Do you know what the original cost of the *Blue Wing* was?—A. Yes, sir; I have seen in overhauling it. It was purchased some six or

seven years ago. I remember to have seen that she cost \$2,500. That was her cost. She was an old boat when she was purchased.

Q. Has not a large sum of money been expended on the same for repairs, furnishing, etc., in proportion to the original cost?—A. I can only say as regards my time. For the past two years I would say not. When I first came here it was said she wanted new boilers, and I inspected them, and I found she did not. By repairing I thought she would last. I had them repaired, and they are now in order, and as good as ever. The only expense has been in changing her deck houses, cutting them off to make it shorter, and give more room on deck.

Q. Could not a new boat have been bought for the amount of money that has been expended for repairs on the *Blue Wing* during the last three years?—A. Decidedly not; not a boat of the size and kind. She is not a very comfortable boat, but good enough for this river. She is weak, and not fit for outside work at all.

Q. Were you directed by Commissioner McDonald to take charge of the erection of a new fish hatchery building at Put In Bay?—A. Yes, sir; and I have my orders here now.

Q. Tell us about the site, etc.—A. The site was donated to the Commission. Afterwards we found it would be better to have more room. There was a road laid out and it was thought better to have this land extend back to this road so as to be accessible to the highways; so that this land now extends from the water's edge back to the highway. It was all donated.

Q. Did the first strip that Mr. Gay got for the Fish Commission run back to the proposed street, shown on the plan?—A. I have already said it did not.

Q. Did Mr. Gay show good judgment in securing such a small lot at first, having no outlet on the land side, except on private property?—A. There is a little question of looking a gift horse in the mouth; it was all donated. We made the request for more and got it.

Q. Did not Mr. Gay influence the Fish Commissioner to have the Put-In Bay hatchery building lowered considerably, and rock excavation being thus necessitated?—A. Well, it was done.

Q. Were you consulted about this change?—A. No, sir; I was not; because I was away on leave.

Q. Did you protest against it?—A. I did, when I returned; yes, sir; that is to say, after I had returned from leave, I told the Commissioner that I thought it was not necessary, and that it was better not to do it.

By Senator BLODGETT:

Q. Mr. Gay was performing your duties in your absence?—A. Mr. Gay was out there, and I think that he thought it would be better, and therefore recommended it to the Commission.

Q. What was Mr. Gay's authority?—A. That I do not know. Whether he was in authority to look after the work at that time, or not, I do not know.

By the CHAIRMAN:

Q. He was the superintendent?—A. Whether he was given authority to make recommendations, and in charge of the work, I do not know. There is no reason to believe but that he was.

Senator BLODGETT. And the Commissioner acted upon his recommendation?

By the CHAIRMAN:

Q. How much did it cost to lower it?—A. It cost about a thousand dollars.

Q. Did it add to the appearance of the building?—A. Well, I have not seen it since it has been up, but we have an inspector there, and he writes me that he does not think it does add any, that he thinks the building is too long for its height.

Q. Was not this needless expense the result of Mr. Gay's importunities on Commissioner McDonald to have the building lowered?—A. I think that question was answered before.

Q. Was this an expense additional to the contract price?—A. Yes, sir; that is, the contract price for the superstructure was so much; then the excavation of rock and earth was so much a cubic yard.

Q. In regard to this yacht, which you purchased in New York, for what purpose was she intended to be used?—A. I stated in my report in the beginning that the object of the boat was first to be used on the Delaware River in the shad hatchery, and later in the season in the Long Island Sound.

Q. How was she built?—A. As a yacht.

Q. A pleasure yacht?—A. Yes, sir; for private use.

Q. Where is she now?—A. She is on the Long Island Sound. She was ordered there a few days ago, and is probably there now.

Q. Was there a public advertisement in the papers for the purchase a steam-yacht by the Fish Commission; and, if so, in what papers did it appear?—A. I think that is fully stated in my report.

Q. In regard to this shipment of shad to Germany; do you know who was to be in charge of it?—A. I only know it was understood that Mr. Worth was to go in charge. He is the superintendent of the Central Station.

Q. Who was to blame for the expenditure of this large amount of money before ascertaining that the steam-ship company would allow the plant on board?—A. Well, of course that was the Commissioner's instruction, to go ahead; and, as I say, I think it is evident that he was justified, because if we had had to wait, we would not have had time to prepare the apparatus, even if we had got permission.

Q. Your reply would be "the Commissioner"?—A. Yes, sir.

Q. What did the pump cost that was used in the Put-in-Bay Station?—A. There were three pumps, the cost being between nine hundred dollars and a thousand; a little over \$900.

Q. For the three?—A. Yes, sir; two large and one small one.

Q. Were they let by contract when the rest of the machinery was?—A. No, sir; the specifications for the erection of the plant stated that the pumps would be furnished by the Commission. That was done on my recommendation, because I thought we could do better. I wanted a particular kind of pump, and I knew I could select them and have whatever changes made which were necessary.

Q. Do you know Mr. Waters, of New York?—A. Yes, sir.

Q. Has he done work for the Fish Commission?—A. Yes, sir.

Q. What is the work given to him?—A. He, in the first place, is the inventor of the Waters engine; there are two boats that were supplied with his engine, and also the Waters boiler, one of the launches, and one of our schooners, the *Grampus*. I put one on for the purpose of taking deep-sea temperatures. A party of scientists, three professors from Princeton University, last summer were engaged in taking deep-sea temperatures, the idea being to study the migratory habits of fish. That was the idea in view. This schooner last summer was fitted with that apparatus for taking deep-sea temperatures, as far as a thousand fathoms, with this Waters boiler, and I put it on because we had to have a special apparatus. I wanted a special type of boiler, a coil boiler, a tubular boiler, and I selected this.

Q. Why do you interest yourself so much in giving him work?—A. Well, in this case, I selected his boiler because I thought it was the best. Mr. Waters is given work now and then because he is supposed to be the best man. He is accommodating; he knows just what the Commission expect, and it is for the best interest of the Commission I have always found. Occasionally I have gone to him for information that I wanted, where to get machinery of special types—that is the only way. Mr. Waters, in the two years that I have been in the Commission, has only furnished this one boiler of his own; all the rest of the machinery was bought before I went in.

Q. What work he has done, was it got by public advertisement?—A. No, sir.

Q. Have you ever seen any of the employés of the Fish Commission working on McDonald's filter?—A. Yes, sir.

Q. Who worked on same?—A. Well, we have here at the Central Station two machinists, and each of them at times has been at work.

Q. Do you know their names?—A. Sauerhoff and Francis Barry. There are two Barrys in the Commission; this is Francis.

Q. It has been charged that Colonel McDonald was employing Government employés in getting up his filter which he had patented. Do you know anything about that?—A. Yes, sir; this filtering has been a source of great trouble. It has been a great trouble to get a good filter for the use of the Commission. A great many have been tried. Now, one filter has been in use for a long time, and to do its work properly it was found that it killed the fish. Alum is used to coagulate the organic matter in the water, and if there is too much alum it kills the fish. The Commissioner has studied that a great deal. The filters are used to furnish clear water to the aquarium in which different species of fish are kept. Now, he has hit upon this idea, and has experimented with it, and has brought it to perfection, simply for the use of the Commission. So far as I know, he has never sold one, and you will find down here at the Central Station three of his filters.

Q. They work?—A. Beautifully. They are automatic in their action.

Q. Do you know if he makes any charge to the Commission for the use of them?—A. I am positive he does not. These men have simply been employed—of course he was justified in doing it, I suppose—to work for the fish industry, to the interest of the Fish Commission, by experimenting. I think the Government recognizes the benefit of inventions so much that I believe they permit officers to patent inventions to be used in Government work free of cost. Now, I think Colonel McDonald has paid for his patent, but I think the law allows him to patent it free.

Q. The office charge?—A. Yes, sir. Do you know this filter; would you care to have it explained? It is a very nice idea; it is very simple.

The CHAIRMAN. I have seen it.

The WITNESS. It is automatic in its action; it requires no cleaning

By the CHAIRMAN:

Q. It has been charged generally, Mr. Bayley, that in the management of this Central Station there is an entire lack of rules as to hours of service. It has been charged in some of these newspaper articles, and I would like to have you state what you know about it, that employés come and go when they please. It has been charged that the general management and discipline of this Central Station were loose. What can you state on that subject?—A. I only know this, that it was charged that a draughtsman, who was under my orders, was going

out a great deal when I was away. My duties call me to different stations. It was charged that when I was away he would go out.

Q. What was his name?—A. Blaisdell. I simply called his attention to the rules. This was brought to my notice by the chief clerk. He said that it was demoralizing to the other men; that they saw him going out at all times. Consequently I reported it to the Commissioner, and the Commissioner had an order written, which was sent to me, and I handed it to him calling his attention to the regulations in regard to hours, and that he must abide by the rules.

Q. Were you familiar with his work?—A. Yes, sir.

Q. Do you consider him a competent and skillful man?—A. I consider him a competent draughtsman, but not a designer. My specialty is engineering, and I know that he knows nothing about mechanical drawing. So far as architectural draughting is concerned, I am not really competent to judge. I know this, that his drawings for the Put-in-Bay Station had to be changed at the request of the contractors, because it was shown they were faulty.

Q. Is he still in the employ of the Commission?—A. No, sir.

Q. Do you know why he was dropped?—A. He was dropped, as I understood, partly because there was no work and partly because he had been insubordinate in many ways, and I remember on one occasion of being shown an extract from a letter, a newspaper article, that had been published in Missouri somewhere.

Q. Written by him?—A. Yes, sir; it was supposed to have been written by him.

By Senator BLODGETT:

Q. Reflecting upon the Commissioner?—A. Yes, sir; upon his management.

Q. Reflecting upon his superiors?—A. In regard to the station in Missouri, I have never had anything to do with it, because the water supply is by gravity. Consequently I have never had anything to do with it.

TESTIMONY OF PERRY S. HEATH.

PERRY S. HEATH, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where is your residence?—A. I am temporarily in this city.

Q. Are you in the employ of the Fish Commission?—A. No, sir. Never was.

Q. Never have been?—A. No, sir.

Q. Have you seen some newspaper articles published in the New York Press and other papers making various charges against the management of the Fish Commission?—A. Yes, sir. I have read most of them, I think.

Q. Will you in your own way just tell us what you know about the substance of these charges?—A. I really know nothing about the truth of any of the charges from my own knowledge. I am a newspaper correspondent myself, and I have handled some of these articles. They came to me from various directions. I think I published in the Indianapolis Journal and the Omaha Bee, the papers I represent, practically the general information contained in the New York Press dispatches, but I did not go into the details.

Q. You say you used that; you took it without investigating it your-

self or did you undertake to make any investigation yourself as to its correctness?—A. No, sir.

Q. You assumed that they were correct?—A. From the statements that came to me from newspaper correspondents. I know nothing about the composition of the Fish Commission. I am not personally acquainted with any man upon it. I think I never saw Commissioner McDonald, and I do not think I would know him if I were to see him. I have never heard anything directly affecting the integrity or the honesty of Commissioner McDonald. Most of the information that I have handled dealt in generalities.

Q. Then, of your own knowledge, you know nothing about the management of the Commission or have no personal knowledge of any of these various charges which have been made in the New York Press?—A. No, sir. I have never seen any of their orders, their directions or any of their papers that would give me any knowledge as to the truthfulness of these statements.

Q. If there is anything wrong or loose about the management of the Commission we want to find it out. Do you know anything of your own knowledge, except what you have seen published on that point, and can you give us any information which would aid us in our inquiries; if you can give it, in your own way please do so.—A. I looked up the files of the newspapers I represent, and thought I could just hand you the dispatches I have written, so that you would know whether they contained anything of interest to you. I had unbroken files. It is possible that I might be able to look them up. I think Mr. Garthe, of the Baltimore American, has submitted, or will submit, copies of his dispatches to the Baltimore American. Our information, the source and the character of the matter published, is almost parallel, duplications I think, so that what he will submit to you will cover what I have written and what I know in fact.

By Senator BLODGETT:

Q. What papers do you represent?—A. The Indianapolis Journal, the Omaha Bee, and the Columbus Dispatch.

Q. Did the articles appear in each of these papers?—A. Yes, sir; I think in all of them.

TESTIMONY OF JOHN E. BROWN.

JOHN E. BROWN, being duly sworn and examined, testified as follows

By the CHAIRMAN:

Q. What is your full name?—A. John E. Brown.

Q. Where is your residence?—A. Washington.

Q. Are you in the employ of the Fish Commission?—A. I am.

Q. How long have you been in the employ of the Fish Commission?—A. About ten years; well eight years, I have been there at the Central Station. I have been there at the Central Station since 1882.

Q. What position do you occupy?—A. I am in charge of the distribution of property.

Q. Cars?—A. Cars, cans, and everything connected with distribution.

Q. Did you occupy that position under Professor Baird?—A. No, sir.

Q. What was your position under Professor Baird's administration?—A. I had charge of that, and was acting superintendent in charge of

property generally, not only in the Fish Commission but a great deal of Museum property that was there a great deal of the time. The Armory Building, some seasons of the year when there was no work, would not be open and there was a great deal of Museum property at the Commission I would be over there and if anything was wanted I would go over there after it.

Q. During the life of Professor Baird the Smithsonian Institution and the Commission were pretty intimately connected?—A. Yes, sir; he was Commissioner of Fisheries and Secretary of the Smithsonian.

Q. What salary did you receive at that time under Professor Baird?—A. Well, I started in at \$45 a month. The professor raised me to \$100 a month.

Q. Who is superintendent at the Central Station at this time?—A. S. G. Worth.

Q. From what State was he appointed; do you know?—A. He is from North Carolina, and I suppose he is appointed from there; I do not know.

Q. What is his salary?—A. Eighteen hundred dollars; \$150 a month.

Q. At the time of Professor Baird's death how many men were employed in the Central Station to care for the distribution of the property and to carry on the shad production?—A. About seven, I think. I could not tell without looking.

Q. About what was the pay-roll for running the Central Station at that time; could you state?—A. I could in a minute, sir. It might not be exactly right. I will give it to you as near as I can from memory. [After making computation.] Well, right in the busiest season it would be somewhere in the neighborhood of \$500.

Q. Five hundred dollars a month?—A. Yes, sir; that would be the very busiest season. Then a number of these men would be dropped, and it would run down.

Q. Run down to what?—A. Probably drop down to \$400, I should think.

Q. Is there an increase in the number of employés at this time engaged in the same work outside of the officers of the Commission?—A. Well, yes, sir; I think there is; I do not know so much about that. I am not situated so as to know. I have not given any attention to it. My duties are entirely in another place. I see a great many more around there, but I can not tell.

Q. How is it in your own department; have you more help than prior to Commissioner McDonald's coming in? Your own force; is it larger than it was under Professor Baird?—A. My duties are entirely different. I only have charge of the distribution of property now. Before that I had charge of everything going in and out for all the other stations, and now the superintendent of the Central Station has charge of everything sent there and everything coming out. I had charge of that. My duties are now entirely different from what they were before.

Q. It has been charged in some newspaper articles and by one witness who was before us that there was a great deal of looseness in the observance of the rules as to hours; that employés, many of them, came late if they chose to and went away early, and that the discipline, you may term it, at the Central Station here was very lax; and that everybody did about as he pleased. What can you say on that point?—A. I should have to say that that was the other way since Mr. McDonald has been there and particularly in our department. I know our men are prompt. The messengers and clerks are on time, and they are

not away without getting permission ; not even to go up town without getting permission from the proper person.

Q. Do you know anything about the number of relatives of Commissioner McDonald or of his wife's or connected in any way who are employed in this Central Station. It has been charged in the papers that there were a long list of such ?—A. There is but one whom I have heard of, who is Col. McDonald's nephew.

Q. What is his name ?—A. Francis McCormick, I think, I am quite sure ; and then there is one Lewis there that I have understood was a relative of the colonel's wife, but I do not know him.

Q. What position does he occupy ?—A. He has been a clerk. He was record clerk down at Fort Washington this summer. He has had different positions about the Armory Building, and then there is his brother who has been a messenger on the car. I do not know that they are any relatives of the colonel. I have always understood that they were.

Q. Are those the only ones you have understood were relatives of his family ?—A. The only ones that I could state under oath. I have heard of others, but they are the only ones that I have good reasons to think are relatives of Colonel McDonald's that I know anything about.

Q. Were you appointed to your present position by Commissioner McDonald, or did you hold it before he came in ?—A. No, sir ; I was transferred from the Central Station to the Division of Distribution. I have been directly under Colonel McDonald ever since 1882, until he was appointed Commissioner.

Q. What I want to know is whether a good share of your service was under Professor Baird as Commissioner ?—A. Yes, sir.

Q. Were you advanced by Mr. McDonald after he came in as Commissioner ?—A. I was advanced on Colonel McDonald's recommendation, but Professor Baird advanced me.

Q. To Professor Baird ?—A. Yes, sir.

Q. And you have held the same position you now hold ever since McDonald came in ?—A. Well, he appointed a Mr. Seal Acting Superintendent, and for a while I reported to Mr. Seal.

Q. That was because you were on detached service ?—A. Yes, sir ; to a certain extent. I sometimes go on a car, if necessary, and then occasionally I go out with fish.

Q. Do you know anything about the method of the car service ; that is, when a car goes out to distribute fish does the car have a cook on board ?—A. Yes, sir.

Q. Does the Department furnish the supplies for the trip ?—A. No, sir.

Q. Who does ?—A. The captain in charge of the car is paid \$100 a month ; his assistant messenger is paid \$75 a month ; the apprentice messengers get \$45 a month ; then he is raised after a year or so to \$60, and then if he gets to be an assistant messenger he gets \$75 ; and the messenger in charge, the captain, gets \$100 a month ; the cook gets \$45 a month, I believe. Then there is \$15 taken off of each man's pay for the mess, and they spend that themselves. If there is any money over, which there is sometimes, when they are traveling about where provisions are cheap and plentiful, they save a little, and when they are going across the plains where provisions are high they sometimes lack a little.

Q. So that they furnish their own subsistence —A. Yes, sir.

Q. Have you any knowledge of any fish car being furnished with

champagne, and wines and cigars at the expense of the Commission?—

A. I do not think there is anything of the sort.

Q. You do not know of any such?—A. No, sir. I would be very apt to know, because they come not exactly under me, but I have charge of them, and they only have such such things as they have a right to have for their own personal use. I know there is nothing of that kind.

Q. If any supplies were furnished the mess furnished it themselves?—

A. Yes, sir; I know there was never such a bill put in; there might have been in old times, but not in late years since I have had any thing to do with it.

TESTIMONY OF THOMAS B. FERGUSON.

THOMAS B. FERGUSON, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where is your residence?—A. In Washington, at present.

Q. Are you at present connected with the Fish Commission?—A. Not at all, sir.

Q. Have you been in former years?—A. I was for ten years, I think, connected with it; since 1878 or 1879.

Q. Was that during the time when Professor Baird was at the head of the Commission?—A. Yes, sir.

Q. What was your position and duties during that time?—A. I was Assistant Commissioner, and had general charge of work under, of course, Professor Baird's supervision.

Q. When did you leave the service?—A. About three or four months after Professor Baird's death; shortly after the appointment of Professor Goode as Professor Baird's successor.

Q. Have you known much about the affairs of the Commission since you left it?—A. Almost absolutely nothing. I have known very little except in reference to two stations; one is Wood's Holl establishment, because my residence is there during the summer, and I know very little of that except what I am obliged to see, as I sail about the harbor; and the other is the Battery Island station, which I have visited frequently; but outside of that I know little or nothing.

Q. Do you know whether very many changes have been made in the personnel of the Commission since Mr. McDonald took charge?—A. I know nothing of my own knowledge; nothing positive; only hearsay, and what I have seen from some articles in the papers.

Q. You speak of articles in the papers. Very recently there were some charges made, and a request was made by Commissioner McDonald for an investigation. The articles were, I think, largely in the New York Press and other papers. Have you read some of those articles?—A. I have only seen two of the articles, one a Sunday issue, and one on the following Monday.

Q. Which would be about May 25?—A. Yes, sir.

Q. In those articles it was charged that there were a large number, probably twenty or thirty employés of the Commission, who were relatives of Commissioner McDonald or his wife; do you know any thing about that?—A. Absolutely nothing.

Q. If you have read those comments in the articles referring to the Commission, and know any thing about any of the charges, tell us in your own way any thing that you know about them. We are a sort of a drag-net; and we want to get at any thing there is; we are seeking

for light. Do you know any thing in regard to any favoritism. I will read you the resolution.—A. It is hardly necessary. I read it in the Record.

Q. Do you know what the scope of this inquiry is?—A. Yes, sir.

Q. If you can give us any information which would come within that, or generally bearing upon the management of the Commission, we would be glad to have you do so.—A. As I say, I know very little of my own knowledge of the Fish Commission now. After eleven or twelve years, in fact fourteen years of work, after my connections were severed with it, I tried to know as little as I could of it. As I say, the only things that have come under my personal observation at all have been the conduct of those two stations, and I do not conceive that they have any thing to do with this investigation.

Q. We take the liberty to go outside. You speak of Wood's Holl; what can you say as to the general conduct of that station since the present Commissioner came in?—A. Well, simply, that from appearances very little has been done there. I never have been inside of the building since I have been out of the Commission.

Q. Do you know whether the persons in charge have been changed or not?—A. Oh, yes, sir; the personnel has been very much changed since my administration, or Professor Baird's administration. During Professor Baird's administration Mr. Atkins was the man in charge of the station, and I believe a Mr. Dauer has been in charge.

Q. Do you know, from your observation or from other sources, as to the comparative amount of work done there, whether it is more or less than formerly?—A. As I say, I never have been inside of the building since I have been out of the Commission. From outward appearances I think very little has been done.

Q. Could you judge of what was going on inside without going in?—A. No, sir; I could not. I do not care to judge.

Q. In short, we would be glad, if you have any knowledge or any statement to make as to the general conduct of the office, as to the administration of the office, any comments to make upon it, if in your own way you would favor us with it?—A. As I understood the resolution that you referred to, this matter of changes is involved, and I would say this—because you have asked as to changes that have been made in the personnel of the Commission and the salaries—I know pretty much the personnel of the Commission at the time of Professor Baird's death; but the office of the Commission would show that very readily, if you call for a list of the employés and their salaries, or they can be got from the Treasury, and then the present list, and they can be compared. I had a duplicate paper of all the employés, and I kept it in my office for some time; they were simply duplicates that I had for my own work; but they were not important papers and they have been destroyed long ago. They are within your reach either from the Commission itself or from the Treasury.

Q. It was charged in these papers that Colonel McDonald employed a large number of relatives; do you know anything about that?—A. Not at all, except from hearsay. I have heard that these young men, these relatives, had been employed. I heard it rumored before I saw the article in the paper, but I know nothing of it—absolutely nothing of it. Of course there have been rumors, but I have no knowledge of them whatsoever. One of the rumors, I think, was in reference to Captain Collins and his relatives.

Q. It was charged he had two or three relatives there?—A. Yes, sir.

Q. It says that Colonel McDonald had a large number of relatives

either of his own or his wife's; you can not state as to that?—A. I can not state at all, for I am not acquainted with any of them. As I say, of course a great many rumors have been afloat, but they were simply rumors, and I have never taken interest enough in the matter to verify it in the least. Therefore I know nothing of my own knowledge of the conduct of the Commissioner, except the controversy that you know of, the legal controversy that has been going on between the Fish Commission and myself, and what I have seen of the administration of that one station, because that is my outing place and that is all that has come immediately under my observation. I could criticise very severely Colonel McDonald, as far as the suit is concerned.

At 12.30 o'clock p. m. the subcommittee adjourned until to-morrow at 10 o'clock a. m.

WASHINGTON, D. C., *June* 18, 1890.

The subcommittee met at 10 o'clock a. m. pursuant to adjournment.
Present: Senators Stockbridge (chairman) and Blodgett.

TESTIMONY OF EDWARD S. RAYMOND.

EDWARD S. RAYMOND, being sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where is your residence?—A. 928 K street.

Q. Washington?—A. Yes, sir.

Q. Are you in the service of the Fish Commission?—A. I am not; no, sir.

Q. Have you ever been?—A. No, sir.

Q. Have you seen articles published in the newspapers recently, particularly in the New York Press, making various statements with regard to the management of the Fish Commission?—A. Yes, sir.

Q. Have you any personal knowledge coming within the scope of these attacks upon the Commission?—A. None whatever; no, sir.

Q. Do you know anything about the management of the Fish Commission?—A. I do not, sir; I do not know why I was summoned here.

Q. You have no knowledge touching that matter at all?—A. None whatever. I have had very little dealings with Colonel McDonald, and know nothing about it personally. Of course I have read and heard, but know nothing. Perhaps I can tell why it has been brought about. I made application there for a position, and the position was given to somebody else, and perhaps they thought I had some grievances about the matter. Still I have none whatever.

Q. Have you had any conversation with anybody about this investigation?—A. Well, I do not remember as I have. I am boarding in the house with gentlemen who are employed in the Fish Commission, and what conversation I have had I may have had with them. Of course I have read the papers, and I am sort of interested in the proceedings.

Q. You say you applied for a position in the Department?—A. Yes, sir.

Q. When was that?—A. I made the application the latter part of April.

Q. Have you any reason to believe that you were treated unfairly as

regards that application?—A. Well, I have no right to judge, of course, in that matter. They appointed somebody else, and they thought perhaps I was not a fit subject to fill the place. I do not know why the appointment was made. I know nothing about that.

TESTIMONY OF GEORGE H. H. MOORE.

GEORGE H. H. MOORE, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where is your residence?—A. My home is Havre de Grace, Md.

Q. Are you in the employ of the Fish Commission?—A. Yes, sir.

Q. In what capacity?—A. Superintendent of distribution.

Q. Superintendent of distribution from that station?—A. Of all the stations. I suppose that to be my title. I am designated as superintendent of distribution, and I suppose it takes in all.

Q. Have you seen a series of articles, published principally in the New York Press, making certain charges as to the administration of the office?—A. I have read some of them. I could not say that I have read all.

Q. You have read some of them?—A. Yes, sir.

Q. The first article published, if my memory serves me, was the 25th of May, quite a long article, in which the Commissioner was charged with nepotism to large extent and favoritism. Do you think you read that article?—A. Yes, sir; I think so.

Q. Do you know any thing as to the truth or falsity of those statements?—A. Well, I might say that I can only answer that in a general way. Of my own personal knowledge I do not. Hearsay evidence I suppose is of no value.

Q. Do you know of any relatives of Mr. McDonald or his wife who are employed in the Department?—A. There are those who are said to be relatives of his wife.

Q. Can you give their names?—A. Well, there is Mr. Lewis, C. C., and his brother whose initials I think are R. E., I am not positive about that, and Mr. McCormick.

Q. Those you think are relatives?—A. I am told so, sir.

Q. Are those all you know of as being relatives of his?—A. They are.

Q. Do you know them personally?—A. Yes, sir.

Q. Are they, in your judgment, competent and efficient in their positions?—A. I never heard any complaint against them. They are not in my division.

Q. Do you know how this matter of these messengers, or whatever you may term the men who are sent out with a car, is managed; how do they subsist on those trips; does the Government put in the supplies for their use upon the trips, or is there a mess, and do they themselves defray the expense?—A. Years ago the Government paid for what provisions they used; a party was put in charge of the car; but that was found expensive, and the cost of the cars was so widely divergent that it was deemed best to make a stated allowance for each man, and it was put at \$15 a month, and they now buy their own provisions.

Q. They are allowed \$15 a month?—A. That is a part of their salary.

Q. And they furnish their own subsistence?—A. Yes, sir; and they furnish their own subsistence.

Q. When was this change made, or about when?—A. Well, I should say about five years ago, four or five years ago.

Q. That change was made under Professor Baird's administration?—A. Yes, sir.

Q. And it has been continued under the present Commissioner?—A. Yes, sir.

Q. Do you know at any time of wines and champagne and cigars being furnished at the expense of the Government upon such cars?—

A. No, sir.

Q. Do you know any thing about the way in which the money received from the sale of fish taken by the Government seines was disposed of—as to whether those fish are sold; and, if so, how the money is treated?—A. I know nothing about it.

Q. Are you here a good deal of the time?—A. Most of the time, sir.

Q. It has been charged that in the central office here there was very lax discipline; that the employés came and went about as they pleased, came late and went early, and that there was very little to do, and that more help was employed than was necessary to do the current work of the station; can you state any thing about that from your observation or otherwise?—A. I can not, only as to my own division.

Q. Then you must be able to state something upon that point from your observation?—A. Well, I find that about all I can attend to is to the affairs of my own office, and I know that the employés there keep very regular hours. As to the other divisions I could not say positively that there is any loose system about it. I am not in a position to say.

Q. It never has come under your observation?—A. No, sir; I could not say that it has.

Q. It has been charged that the Commissioner has his pets and favorites, and that they do as they please, while others are held very rigidly to their duties; can you say any thing about that?—A. I do not think that is true.

Q. It has been charged that the Commissioner has used Havre de Grace for a shooting place for himself and friends; have you any knowledge upon that point?—A. I do not think that Colonel McDonald has ever been in Havre de Grace twelve consecutive hours since I have known him.

Q. Do friends of his go and quarter themselves upon the stations to indulge in shooting?—A. I have never known such to be done.

Q. It has also been charged that that has been made a point where repeaters and Democratic voters have been held, so as to have them on hand for elections; do you know as to the truth of that?—A. Well, I should say that certainly was untrue, because the employés at that station are employed, the majority of them, only a month or two each year, and that in the spring during the shad work.

Q. That does come during the election time?—A. Not to my knowledge.

Q. Do you know of any abuses existing at this station for which Mr. McDonald or any of his subordinates are responsible; that is, any mal-administration?—A. Well, to go into that now would require a reflection upon some, whom, of course, I feel a delicacy in assailing. I think the expenses of the station itself, that is of the superintendent of that station and his employés, could be materially reduced, but I have no right, I suppose, to criticise the actions of the Commissioner, who certainly has entire charge of that matter, and it is beyond me, I think, to criticise him.

Q. What we are after is a thorough investigation of the general management of the station, and if you think the Government suffers from the employment of more help than is necessary or any abuses of that kind we would be glad to have you say so.—A. I think criticism is very easy, sir, and I would defer to Colonel McDonald's judgment in the matter, I think. I think that Colonel McDonald's judgment is better than mine would be; we do not all agree as to ideas, and I think too much of Colonel McDonald to criticise him in any way unjustly.

Q. Does Colonel McDonald stand high with the scientific men of the country in this particular Department?—A. That is a question I am not in a position to answer. I am not acquainted with scientists myself.

Q. If there is anything touching this general subject which you desire or are willing to state here which would have a bearing upon it please do so in your own way.—A. I would sooner be excused from any further answers, sir.

TESTIMONY OF L. G. HARRON.

L. G. HARRON, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where is your residence?—A. Maryland; Prince George County.

Q. Are you in the employ of the Fish Commission?—A. Yes, sir.

Q. In what capacity and what is your position?—A. Well, sir, in the spring season I have charge of the seine at Fort Washington, and at other seasons of the year doing different kinds of work, sometimes upon the cars and sometimes at the ponds, and sometimes around the main office.

Q. How long have you been in the employ of the Commission?—A. Six years.

Q. That dates back to Professor Baird's administration.—A. Yes, sir; I was not there permanently six years.

Q. But at different times?—A. Yes, sir.

Q. You say you are in charge of the seine at Fort Washington?—A. Yes, sir.

Q. Have you been there six years?—A. Yes, sir.

Q. Will you tell us what you do with the fish? I understand after the spawn is preserved the fish are sold?—A. Yes, sir. They are sold to pay the expense of the seine.

Q. And the money received goes to pay the expense of the seine?—A. Yes, sir.

Q. Is it usually sufficient to pay that expense?—A. It usually is—yes, sir.

Q. How has it been this year?—A. This year I do not really know exactly, but I think it is a little behind.

Q. The catch was light this year?—A. Yes, sir.

Q. Do you know any years when there has been an excess of money over and above the expense of the seine, and what has been done with that money?—A. Well, I could not say exactly; I do not keep the books myself, and I do not know exactly what was realized from the seine or what was expended.

Q. Where are you now employed?—A. I am now employed at the headquarters of the Fish Commission.

Q. At the Central Station, as it is called?—A. Yes, sir.

Q. In some newspaper articles, which perhaps you have seen, the Commissioner has been charged with employing a large number of

relatives of his own or his wife's family connections; do you know anything about that?—A. No, sir; I do not know that he has a relative in the Commission.

Q. It has also been charged that at the station, particularly, the discipline and rules are very lax, that employes come late and go early and have very little to do. What can you say upon that point?—A. Well, sir, I think that is not true, as far as I know. I do not know of anything of the kind. I know I have to be there on time and I leave on time, and if I want a few hours off I get permission.

Q. If you know any thing about the management, which in your judgment is wrong and ought to be corrected, and for which the Commissioner ought to be censured, you will please give us that information.—

A. As far as I know, Colonel McDonald is about as conscientious a man as there is in public life to-day. That is my belief about it.

Q. You believe him competent for the position?—A. Yes, sir; perfectly competent.

Q. Do you know of any undue favoritism?—A. Not the slightest.

Q. He has been charged with having his favorites and pets, and that they could do almost any thing, while others were held pretty rigidly to the rules?—A. I think that is all untrue, as far as I know.

Q. It is charged very strongly in these papers that at Fort Washington you men who were stationed there, some of you, in some way connected with the station, kept liquor, which was furnished not only to the employes, but to outside parties, sold to them; do you know any thing about that?—A. That certainly is a falsehood.

Q. Who is the officer in charge there of the station?—A. S. G. Worth for the last three years.

Q. Have you ever seen Mr. Worth intoxicated?—A. No, sir; I have not.

Q. He is not addicted to the use of liquor, so that it interferes with his duties?—A. No, sir; I think not. I have seen him for three years but I never saw him under the influence of liquor that I know of.

TESTIMONY OF WILLIAM H. BRIGHT.

WILLIAM H. BRIGHT, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where do you reside?—A. I live at 494 Maryland avenue.

Q. You live in Washington?—A. Yes, sir; I have been here for two months.

Q. Are you in the employ of the Fish Commission?—A. I am not, sir.

Q. Have you ever been?—A. I have been, yes, sir. From the 15th or 16th—I do not recollect which date—of January until the same date in May.

Q. This last May?—A. This last May; yes, sir.

Q. You were employed by Mr. McDonald, the Commissioner?—A. Yes, sir.

Q. In what capacity did you act?—A. Well, I was sent out from here to Colorado as an assistant at that station, but I did not see any assistant. That is the way my appointment read; I am pretty certain it did.

Q. As assistant superintendent?—A. No, sir, I do not think so; as assistant simply, the word "assistant."

Q. How long did you remain there?—A. I was there four months.

Q. What were your duties there?—A. Well, when I first went there the first two months I did not do any thing, much; sort of got around in the morning; there were four of us there, the superintendent and three other men. We would get around in the morning and take out a few fish eggs, and the other men, Mr. Martin and Mr. Lewis, they were outside, would dig a little, a few trenches, but very little, and probably work, say, a half a day in the week. The weather was very inclement; the snow was very deep there. And then after that I went into the hatchery, when the fish were hatched.

Q. When the season came on?—A. When the fish were hatched. When the eggs begin to hatch you have to take care of the young fish, and they are picked out; you have to pick out the dead eggs every morning, and we were building a house there, a big hatchery. I built a hatchery there and Robinson told me, and I guess it is true, that it cost \$13,000 a year. I would go over there and look at that once in a while, and I told Mr. Robinson—I am a builder—"this is the worst built house I ever saw in my life; I never saw such a built house for the public, for the Government; I never saw any thing like that in my life as a house." The hatchery they have is built up in the gulch, and it cost \$1,300 to bring the water to it; they built it up in the gulch and they took the water from the left-hand side of the gulch, around and brought it to this hatchery and went right under the spring where the water is probably 250 feet. They had good cabins; there was one cabin there, I think 28 or 30 feet long, that they could have moved up there and used, and it would have been a better location than down in the gulch.

Q. Who was in charge of that station?—A. E. M. Robinson, I think it is. He would go to town, and he was drunk about all the time; that is about the truth of it. He was drunk at the station; lying in bed drunk with a jug of whisky there. There was another man there named Lewis, whom I do not know any thing about. I never saw him before. He would go to town also, and I got to talking to him as men will—I was from Virginia—and we got to speaking about the war, etc., and I told him where I was during the war. I told him that I was here, one of the first men to defend Washington with Cash Clay. He said that Grant ought to be hung, etc. I told him "You are drawing your living from this Government, sir, and you ought not to talk that way, even if you feel so." He said that Colonel McDonald, I think he said, was his uncle, and this Fish Commission could not run without Colonel McDonald, and that Colonel McDonald would not dismiss him or Robinson.

Q. Why did you leave; how came you to leave the employment of the Fish Commission?—A. Well, it was on Saturday morning; I had my order, my check, and I went over to Leadville. This man Lewis would go away and stay a week and Robinson would never say a word. I asked Mr. Robinson if he would allow me to go to Leadville, which was 6 miles from there, and draw some pay; I wanted to pay my bills and get some groceries, and he said yes. I was going over with Hunt, the gentleman who keeps the hotel there, and I said, "Robinson, I will be back." At that time I was attending to these little fish. I said I would be back, I think, by 12 o'clock, and we had then got some fish out in the ditches and of course I had to feed to them the same as the others and take care of them, and I said, "I think I will be back at 12 o'clock." I said, "You fellows never can get back for two or three days, but I can get back by 12 o'clock." So I went over

with Mr. Hunt, and Mr. Hunt could not get back at 12 o'clock; he got back at 1; he wanted to see Judge Marshall on some business when he got back. Before I got to where the ditches were I saw this man Lewis standing looking on. I paid no attention to him; I have no use for Lewis anyhow, and I went up to the hatchery, and after a little while Robinson sent up for me to come back and bring a bucket and net, and I found when I got there that two-thirds of the fish that were in these troughs were dead, and I said, "This is something very strange; this has run out up here, and you fellows stand round here and you are doing nothing; you stand around here and just let this water run out. I have had a heap of trouble to raise these fish and I do not like it." And Mr. Robinson says—this is hearsay—

Q. We do not care about the hearsay.—A. Well, as I said, I saw Lewis standing there, and myself and Robinson, his wife came there, and his sister, and he wanted to make a play as though he wanted to do something; "if you had come back these fish would not have died."

Q. What time did you get back?—A. I got back at 1 o'clock less five minutes, sir. I said to Mr. Robinson, "I go to the city and come back as a gentleman, and I propose to act as a gentleman, any way; I came here within fifty-five minutes of the time I said I would come, and you fellows have let these fish die. I did not go over there and come back and act like a big drunken loafer, and neglect my business, as you have done, and if you say it is neglect of mine to let those fish die, you are simply a damn liar."

Q. Did he discharge you then and there?—A. No, sir; about a week after that; for that reason, I got a notice; it was for insubordination, and then I wanted to see Colonel McDonald to know what this insubordination was, and I can see the Emperor of Russia as easily as I can him. In that building out there there is a space of that much [indicating] clear around that building where it has been excavated, and that has stood open, and I said to Mr. Robinson, "For heaven's sake go and turn that water off and keep that building from washing down." It is all breaking inside now and it is the worst thing that was ever built, I reckon. This water comes down the gulch in the spring, and it was a small river, they are little rivers, and going in around that house, that foundation and all through it, ever since the snow commenced to fall.

Q. You think there is not good care taken of the building?—A. No, sir. No more care taken of it than if it was nothing.

Q. Do you know as to how many relatives of Mr. McDonald are employed in the service of the Commission?—A. I do not. I know of this man Lewis, and he is the only one I know of. He has a brother over here, I understand.

Q. Have you ever been employed at this Central Station?—A. No, sir. I have never been employed there.

Q. Who is the man in charge of the station in Colorado?—A. E. M. Robinson.

Q. Do you know who he was appointed by?—A. I do not know. By Mr. McDonald, I should suppose.

Q. Do you know whether he was in the service before McDonald came in?—A. No, sir. He is a North Carolinian; he was born in Georgetown, but came from North Carolina to Colonel McDonald, and Colonel McDonald appointed him. I think he first went to Wytheville.

Q. Is that a fish station?—A. Yes, sir; over in Virginia. Those are

all the relations that I know of except this young man, who they tell me was this man Lewis's brother; there were two of them. And this man Robinson is entirely incompetent, that is I do not mean to say but that he may be competent enough, but I will show you this one little item: He wanted a boarding-house to board his men; he is a natural-born boarding-house keeper; people are born for certain professions, and he is a boarding-house keeper. This cabin could have been moved and put where it was. There was \$125 for himself, and Mr. Lewis \$90, and I do not know what Martin was getting, but I do not think as much, and they were the last week in April and 17 days in May counting the amount of money that they were paid. They were that long using a cabin that was 16 by 24; there were that many days' labor performed on it, besides having a team there and what the material cost to build that cabin, and I figured that cabin at \$350, and I could have it built for \$60.

Q. So you think the man in charge is not a very good manager?—A. There is a specimen of it, sir. When the time comes to go out and see about the spawn they go over, and they take a wagon, and I think you will find if you figure up the expenses of the board that it costs about \$15 to \$18 a day to go off and stay all day, and he would come back drunk and no fish. No man can take fish spawn when he is drunk. They have done that. Robinson has come back so drunk that the horse has stopped in the snow and he fell out of the sleigh, and the horse would run off. The ditches, I do not know how much they cost. I could not pretend to tell.

Q. That does not matter; we do not care about that.—A. I thought you wanted to get at the general management of affairs.

Q. Have you ever reported what you know about the management there to Mr. McDonald?—A. No, sir. And for this reason: Senator Teller is my personal friend, and I wanted to go back to Colorado, and when I came here it was through Senator Teller. He went to see Mr. McDonald to give me this position, and I said nothing about it; it was on Senator Teller's account.

Q. You have not reported it to anybody?—A. I went to the office the other day to see Colonel McDonald and the chief said, "How are you getting along out there taking spawn?" And I said, "If getting drunk and breaking up wagons and talking secession is taking up spawn, then they are doing first rate."

Q. Do you know any thing about the management of affairs at this Central Station?—A. I do not.

TESTIMONY OF EDWARD FITZGERALD.

EDWARD FITZGERALD, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Are you in the employ of the Fish Commission, sir?—A. No, sir; I am not.

Q. Where is your residence?—A. Nine hundred and thirty-seven Maryland avenue southwest.

Q. Have you ever been in the employ of the Commission?—A. Yes, sir.

Q. When did you leave it?—A. I left here, I think, about the 20th of May.

Q. This year?—A. Yes, sir.

Q. How long were you in the service?—A. Well, I have been off

and on there for the last five years. I never have been in steady employment; always extra.

Q. What were your duties; what position did you fill?—A. Well, I was on the pay-roll as assistant in the hatchery.

Q. At the Central Station?—A. Yes, sir.

Q. Do you know of relatives of Commissioner McDonald's family being employed at the station or by the Commission?—A. I think there is one who is a relative; that is all I know of.

Q. What is his name?—A. In fact, I could not call his name.

Q. Is it Lewis?—A. No, sir.

Q. Is it McCormick?—A. I think that is the name; I am not certain; I know him just by seeing him going up and down. They said he was Colonel McDonald's nephew.

Q. Is he the only one that you have heard spoken of?—A. Yes, sir, that is the only one.

Q. You do not know of your own knowledge whether he is the only one or not?—A. No, I do not know, only by what I have heard him say that he is a nephew. He is the only one that I know of.

Q. It has been charged in some newspaper articles, which you may have seen, that the management of affairs at the station was very loose; that the employes were not held to rules; that they came late and went early, and did, in a general way, about as they pleased. What can you state upon that point? How was it in your own case?—A. In my own case I was all right; I was prompt enough.

Q. You were on hand on time?—A. And I worked overtime an hour and a half in the evening sometimes.

Q. How was it with those who worked with you?—A. They did the same.

Q. Have you ever been down at the Fort Washington hatchery when they were taking out fish?—A. Yes, sir; I was there this summer two years ago in the hatchery there. I worked down there.

Q. Do you know as to whether any officer in charge or anybody under him kept liquors there which they sold to employes and to outsiders who might come along there?—A. No, sir; not during the two months I was there.

Q. Was liquor used there?—A. No, sir.

Q. Not to your knowledge?—A. No, sir.

Q. Do you know what they do with the fish that are taken in the seine? They take them for the spawn; what do they do with the fish?—A. Ship them to the market and sell them.

Q. Do you know what is done with the money received for the fish?—A. No, sir; I do not know as to that.

Q. That was outside of your duties there?—A. Yes, sir.

Q. Have you read some articles in the newspapers attacking the management of the Commission?—A. Yes, sir; I have read some of them. I have seen them in the papers—in the Star and Post both, I believe.

Q. Do you know anything about the truth of those statements?

The WITNESS. About the drinking and all?

The CHAIRMAN. About drinking and the general management. It is charged that there was drinking at Fort Washington, and it is charged that the Commissioner employed relatives. You have already said that you only knew of one employe who was a relative. It is charged that the management is loose and everybody did as they were a mind to there.

A. No, sir.

Q. You do not think those charges are true as far as you know?—
A. No, sir; not as far as I know.

Q. What we want to get at is as to the general management of Colonel McDonald of the Fish Commission. If you know anything which you consider important, bearing upon that, will you please state it in your own way?—A. No, sir; I do not know anything about that at all.

Q. In your judgment the affairs were managed properly, and the fish properly taken care of and managed well?—A. Yes, sir.

TESTIMONY OF EDWARD D. ROGERS.

EDWARD D. ROGERS, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Are you in the employ of the Fish Commission?—A. Yes, sir.

Q. How long have you been in the employ of the Fish Commission?—
A. This is my fifth year.

Q. You were appointed under Professor Baird, then?—A. Yes, sir.

Q. Have you seen some articles, the first of which was published the 25th of May in the New York Press, attacking Colonel McDonald's management of the Commission?—A. Yes, sir; I have seen some of the articles in the papers.

Q. Do you know of any relatives of Commissioner McDonald or his wife's, or family connections who are employed in the Commission?—
A. Well, my knowledge of the McDonald genealogy is limited. From hearsay I do know; yes, sir.

Q. Give the names, please.—A. Two men, now absent; one was a Lewis and the other a Green. The first names I do not know; and Mr. Con. Lewis, and Mr. McCormick, and Mr. R. L. Lewis.

Q. Two Lewises?—A. Two Lewises, two others who are not there, who have left the Commission.

Q. Who are not in the employ of the Commission?—A. No, sir.

Q. It has been charged in these papers that at this Central Station there was a great lack of discipline and enforcement of rules; that employes did not come promptly, and that they were in the habit of leaving very early—in fact going and coming without much regard to the rules. What do you know upon that subject?—A. As to myself, I always make application, and it is charged up to me out of my time. I am there at 9 o'clock and leave at 4 o'clock. What other men do I do not know; it is not my business.

Q. Have you ever visited the Fort Washington shad station?—A. I never was there but once.

Q. Do you know of the officer in charge or anybody under him at that station keeping liquor which was sold to employes or to visitors who came there?—A. I know nothing about it—nothing whatever.

Q. The charges against the Commissioner in these newspaper articles are the employment of a large number of employes and that in the administration of the office there is great favoritism, that pets and favorites of his can do as they please, while others are held up to the rules, and that the general management is loose and lax. Do you know anything about that, and what is your information as to that?—A. Well, I do not know, sir. He may have his pets. The pay-roll would show that better than I can tell.

Q. You do not know about that?—A. No, sir; I could not say that

Colonel McDonald has any pets whatever, not to my knowledge; I am sure I am not one if he has.

Q. Have you any knowledge of the distributing cars that go out?—

A. No, sir; that is outside of my jurisdiction entirely. I am employed in making illustrations for the different publications of the Fish Commission and doing mechanical drawing and miscellaneous drawing.

Q. If you have read the articles, I will ask you, in a general way, in your own manner, to give us any information which you can touching these charges made in some of these various newspaper articles.

The WITNESS. I am to say what I know?

The CHAIRMAN. Yes, sir.

A. Well, to say what I know, I can only say as to that which comes under me and touches me individually. Hearsay, of course, I can not testify to.

Q. You can give us no further information than you already have?—

A. No, sir.

At 12 o'clock m. the subcommittee adjourned until to-morrow at 12 o'clock m.

WASHINGTON, D. C., *June 19, 1890.*

The subcommittee met at 12 o'clock m. pursuant to adjournment.

Present: Senator Stockbridge (chairman).

TESTIMONY OF WILLIAM MAXWELL WOOD.

WILLIAM MAXWELL WOOD, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where is your residence?—A. Boston, Mass.

Q. You are in the Navy?—A. Yes, sir.

Q. Have you ever been connected with the United States Fish Commission?—A. Yes; I was on duty with the Fish Commission for about three years and nine months.

Q. How long ago?—A. I terminated my service—it is so long I have to think up a little bit—the winter of 1884-'85. If I am not mistaken, it was the 1st of January, 1885.

Q. Professor Baird was then at the head of the Commission?—A. Yes, sir.

Q. In what capacity were you connected with the Commission?—A. I commanded first a little vessel called the *Lookout* for about a year, and then afterwards the *Fishhawk* for two years and nine months.

Q. In what service was the *Fishhawk* employed?—A. Both vessels were employed in the hatching of fish in the proper season and in experimental work in the summer time, dredging and trolling the coast, and in the winter time at Havre de Grace, the crew helping to put up buildings, etc.

Q. You have not been connected with the Fish Commission since Colonel McDonald was made Commissioner?—A. No, sir. I was out of the country when Professor Baird died, and know very little about what happened after I left it. I have been on a three years' cruise since I left it.

Q. This committee was appointed rather in consequence of the publication of a series of articles in the newspapers attacking the manage-

ment of the Commission, and more especially and particularly Mr. McDonald's management as Commissioner. Have you happened to see any of these articles?—A. I have not seen any of them.

Q. You know nothing about the conduct of the Commission, the administration of its affairs, since you left?—A. Nothing whatever since I left. I do not think these articles could have been published in the Boston papers.

The CHAIRMAN. No, sir; they were published in the New York Press and other papers. Here is the resolution under which this committee was appointed. I will read it to you :

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's Office, and especially in respect of the changes in the force, compensation paid to employees, and any alleged favoritism, or other undue administration, and report to the Senate thereon.

Have you any knowledge upon any of the points involved in the resolution?—A. Not a word, sir.

Q. You know nothing about it?—A. I know nothing whatever about it.

At 12 o'clock and 15 minutes p. m. the subcommittee adjourned to meet at the office of the Fish Commission to-morrow at 10 o'clock a. m.

WASHINGTON, D. C., *June 20, 1890.*

The subcommittee met in the office of the Fish Commission at 10 o'clock a. m., pursuant to adjournment.

Present: Senators Stockbridge (chairman) and Squire.

TESTIMONY OF E. I. ROGERS—Recalled.

E. I. ROGERS, being recalled, testified as follows:

By the CHAIRMAN:

Q. When you were before us I failed to find some questions which had been left with us that we were requested to ask you, and I therefore recalled you to ask you these questions. Will you please state the date of your appointment in the Commission?—A. My appointment was in March, 1886.

Q. That was under Professor Baird's administration?—A. Yes, sir.

Q. What were your duties then?—A. Car work then.

Q. Distributing?—A. Yes, sir.

Q. Are they the same now?—A. No, sir.

Q. What are your present duties?—A. I am a mechanical and free-hand draughtsman. My work is here to show for itself.

Q. What was your salary at the time of your appointment?—A. Forty-five dollars.

Q. What is it now?—A. Seventy-five dollars, sir.

Q. Have you ever made plans for the McDonald fishway other than those for the Great Falls, Maryland, work?—A. I have made illustrations for the report.

Q. For the published report?—A. Yes, sir; I have done no private work upon Colonel McDonald's fishway.

Q. Have you ever worked upon plans or draftings for the McDonald filter during office hours?—A. Yes, sir.

Q. How much time do you suppose you have thus spent?—A. I do not know, sir; it was the first one that was gotten up. Mr. Gorham drew the first plans and I drew the second; that has been some years back, and I could not say, sir.

Q. That is the filter which is now in use here?—A. Well, this is the evolution from that; yes, sir.

Q. Have you ever been promised promotions which were never realized?—A. About three years ago; yes, sir.

Q. What promotion were you promised?—A. I was not promised any specific amount.

Q. Were you promised a promotion to a different position?—A. I was promised a promotion in keeping with the work I did. I came into the Commission on car work to get into the Commission, and having a pretty fair education I am adapted to better work than car work.

Q. Do you know Miss J. M. Palmer?—A. Yes, sir.

Q. In what department does she work?—A. She has been in so many I could not tell you now. I think she is in Mr. Scudder's room.

Q. She does clerical work?—A. I do not know; I think she attends to the newspaper clippings, something like that.

Q. Do you know her salary?—A. Yes, sir; the same as mine.

Q. Do you know Miss Lillian Collins?—A. Yes, sir.

Q. What does she do?—A. I do not know; she is in the Captain's room, one of his clerks.

Q. Do you know her salary?—A. No, sir.

Q. Did you apply recently for a short leave of absence?—A. Yes, sir.

Q. Did you take it?—A. I did not, sir.

Q. Why not?—A. The reason I did not take it was because I wanted to save up my time until the fall. That is the principal reason I did not take it. I would only have been away from the office an hour and a half, or something like that, on account of the train service.

Q. Has not Miss J. M. Palmer frequently been absent during work hours?—A. That is a question I could not answer, because I do not know it of my own knowledge.

Q. Has she been charged with time so lost?—A. That I could not answer.

Q. Have you knowledge of her boasting of lobbying to effect legislation touching the Fish Commission?—A. No, sir.

Q. Can you produce any specimen of your work?—A. Yes, sir.

Q. Do you not consider that favoritism has been shown in the administration of the Fish Commission?—A. Well, individually speaking, as far as I am concerned, as I said before, I do not think I am paid as I should be; that is, in proportion to what the other men who are draughtsmen get; the pay that they get. I am way below the average, and do more work than one man who gets \$1,500 a year; that is, the variety of my work is very much in excess of his.

Q. Do you attribute that to any prejudice against you or favoritism to the other, on the part of the Commission?—A. No, sir. Colonel McDonald has generally exhibited a very friendly spirit towards me; he has always been very kind to me one way and the other; that is, outside of salary matters, sir.

By Senator SQUIRE:

Q. Have you ever made any complaints to others so that it has come to the hearing of others that you thought there was favoritism?—A. Well, I think that I have; yes, sir, as others have. If the thing is spoken of it must be two persons or more speaking of it. It is somewhat current about the office. The reason of that is this: that the man who is said to have made those complaints, or some of them, worked in the same office that I did.

Q. You talked with him?—A. Of course I talked with him; certainly, being in the same office.

Q. This is the point that the committee wanted to develop, as to whether there has been, as charged, favoritism; whether some men have been paid more than they were worth perhaps, and others have been paid less than they were worth, and not for business reasons, but for reasons of favoritism; that is the point?—A. Well, I would refer you to corroborate what I say to a witness whom you will probably call, Mr. Gorman, who is an experienced engineer.

Q. Now, we want to get what you have to say, if you have any facts, or any knowledge of this matter and are free to tell the committee. That is what we ask you here for now.—A. I have been here, this is my fifth year, and Colonel McDonald has never raised me a cent. I have been reported for a raise as being a pretty good candidate for a raise by Mr. Gorham, and last July a year ago the colonel said he would attend to it. That is the last I have heard of it. I have written him several letters, citing that other people came in here, men and women, and have been advanced beyond me.

Q. Since you came?—A. Yes, sir; long since I came.

Q. Have you any reason to think that the Commissioner did not approve of your work?—A. No, sir; the Commissioner has stated that

I was fit to fill a better position. He said so to Mr. Gorham, and my work can show for itself.

Q. What reason do you attribute that to?—A. I have no right to attribute it to anything. Colonel McDonald can answer that question himself. I do not know why it is.

Q. You say you have been raised once?—A. Major Ferguson raised me. He was the assistant under Baird.

Q. What year was that in?—A. 1887.

Q. He was under Baird?—A. He was an assistant under Baird.

Q. How much was that raise?—A. I was raised. It was \$60 when I came into the office; it was a \$15 raise.

Q. You were raised from \$60 to \$75?—A. Yes, sir.

Q. And that is the only raise you have had?—A. Yes, sir.

Q. And that is what you are getting now?—A. Yes, sir. I can bring my work here. I draw illustrations for all the bulletins and reports, and I do a great deal of work outside of common draughtsman's work. The work I am working on now is illustrations.

Q. What do you mean by "illustrations?"—A. Illustrations for the report, showing different hatching apparatuses; illustrations of the bulletin that is being gotten up by Captain Collins, showing the fish-boats of the world and the traps.

Q. Your work has always been of that general character, in-door work?—A. My work has been very miscellaneous as far as draughting goes, because every man has a special line in draughting. One is a mechanical draughtsman and another may be a free-hand draughtsman, and mine is a compilation of all of them; I can do free-hand or mechanical work either, it does not matter.

Q. You have been doing both?—A. I have been doing both, and do both now.

By the CHAIRMAN:

Q. You say you have made drawings in connection with this filter in its different stages of progress?—A. I only made one.

Q. The result of that, the evolution of it, is in use now in this building?—A. Yes, sir; it is down stairs.

Q. Do you know whether it accomplishes the object sought?—A. Well, I think it is the finest filter on the market—it is not on the market. It is the finest filter that has been invented. It is ahead of the Pasteur, and that is considered the best.

Q. You consider it a valuable appliance?—A. I consider it a very valuable one.

Q. Do you know whether the Government pays anything for the use of that filter?—A. Not a cent, as far as my knowledge goes.

Q. It is something which Mr. McDonald has worked out, invented, and perfected?—A. Yes, sir; this is merely an experiment, as far as this goes.

Q. Have you been in the habit of coming to your desk late and leaving early, before the expiration of hours?—A. No, sir; I have not.

Q. I think you said you had worked extra hours frequently?—A. Yes, sir; I have worked extra time.

Q. What is your observation as to the general observance of regular hours in the Department?—A. It is a great deal better than it was under Professor Baird.

Q. How is it now?—A. Well, as far as I know, it is very good. I am in my room on the third floor, I am directly over here, and I am not supposed to know when they come in and out.

Q. My question is whether the hours of coming and going are, so far as you know, well observed?—A. Yes, sir.

TESTIMONY OF GEORGE H. H. MOORE—Recalled.

GEORGE H. H. MOORE, being recalled, testified as follows:

By the CHAIRMAN:

Q. Give us the date of your appointment in the Fish Commission?—A. May 25, 1880.

Q. It was during Professor Baird's administration of the office?—A. Yes, sir.

Q. What were your duties then?—A. My first duties were as assistant at the hatchery that was then located at the navy-yard.

Q. What was your salary?—A. A dollar and a half a day and expenses.

Q. Do you remember what it was in 1887, three years ago?—A. I think \$100 a month.

Q. What is your present salary?—A. Eighteen hundred dollars a year.

Q. What is considered a safe number of shad fry to transport in a single can?—A. It depends upon the distance they are to go, and the condition of the fish.

Q. It would vary?—A. Yes, sir.

Q. Give the maximum and minimum.—A. Well, in my judgment, the minimum probably would be about one, if you wanted to, and the maximum probably that you could transport with safety about twenty-five thousand. That would be a pretty good number in any can.

Q. How large are those cans?—A. They hold 10 gallons.

Q. What is the average number of shad fry placed in cans for transportation this season?—A. I can not answer that question, because our tables are not made up.

Q. Could you approximate it?—A. Well, some of the shipmen's that are turned over to the messengers in twenty cans of fish they claim 1,474,000. I think that is as near as I can recollect; and I think in another case a million and a half.

Q. Fourteen or fifteen thousand to a can?—A. About 70,000 to a can.

Q. What is the usual percentage of loss in transportation?—A. Well, on very short trips our losses do not amount to 5 per cent.

By Senator SQUIRE:

Q. The implication is that there was not as many in a can as there ought to be?—A. I presume that is what they are getting at.

Q. Do you know whether any injury or damage resulted from this excessive number in the shipments at that time?—A. Well, of course, I can only answer that by the reports of the messengers who took charge of the fish from here.

Q. Do you know what they were?—A. Well, in some cases they reported the fry weak, and in some of the cases reported them put over in very good condition. I protested against the putting of so many fry in a can, because I do not think it can be done. I do not think that number can be put in a can and shipped successfully.

Q. Can you tell us why it was done?—A. Well, no, sir; I can not.

By the CHAIRMAN:

Q. Was there any lack of cans or was it so that they could as well have been put in more cans?—A. There were plenty of cans.

Q. Who gave the direction as to the number of cans?—A. The superintendent of the station here.

By Senator SQUIRE:

Q. What is his name?—A. Mr. Dana was in charge of the hatching this spring.

Q. He is the one?—A. He put them up and turned them over to one of the messengers for distribution.

By the CHAIRMAN:

Q. Do you know of any apparatus being purchased this season for a shipment of shad to Germany?—A. Only in a general way. I know there is an apparatus here that I was told was to be used for a trip to Germany.

Q. From what appropriation was the cost of this apparatus paid?—A. Well, sir, all the bills were certified to by me.

Q. That would be where?—A. In the division of distribution.

Q. Was that a proper account to which to place that amount?—A. That, I think, is a matter for the Commissioner to determine and not for me.

Q. It was for the shipment of fish to Germany?—A. Yes, sir; I presume so.

Q. What was the salary of the superintendent of the Central Station under Professor Baird?—A. I can not be positive as to that, but I think Mr. Page got \$100 a month.

Q. What is the salary of the present superintendent?—A. One thousand eight hundred dollars.

Q. From what State is he appointed?—A. North Carolina, I think, sir.

Q. About what time was Mr. Worth first employed in the Fish Commission?—A. The records of this office show that he was brought into the Commission in 1878 as a spawn-taker in North Carolina, employed for a month or two that season, and after that time was commissioner of North Carolina for a number of years. He has not been in the continuous service of the United States Commission at all.

Q. Have you seen any indication of favoritism in the administration of the Fish Commission?—A. I can not say that I have, sir.

By Senator SQUIRE:

Q. Do you know of instances where men receive salaries below what they ought to have, and other instances where salaries are excessive and beyond what they ought to have?—A. That is really a question that is pretty hard for me to answer. We do not all look at those things in the same way.

Q. Give us what you have to say about it, what you think about it. Have you expressed an opinion about it?—A. Well, I might instance one or two whom I think have been paid rather small salaries.

Q. You would not want to enter into a general criticism of the Commissioner?—A. No, sir; I would not.

Q. There are one or two; which one or two do you mean?—A. I think Mr. Rogers, for one. He is a draughtsman upstairs.

Q. Who else?—A. And Miss Lincoln, a young lady who has been in the Commission a long time.

Q. Any others?—A. No, sir; I can not think of any others at this time.

Q. Are there any who receive more than they ought to have in proportion to what the customary prices are for such services?—A. Take

employés of the Fish Commission as a whole, I think they are paid rather small salaries. I do not know that there are any of them who get salaries that are too large.

Q. You know none who hold positions in the nature of sinecures?—
A. I do not.

By the CHAIRMAN:

Q. Do you think Mr. Worth's salary is too much for the duties he performs?—A. I do not know that they are. In that connection I have only this to say, that I would sooner not answer any question about him, because, personally, I have nothing to do with him.

Q. You think you might be biased against him?—A. It is as much a personal matter as any thing else; I do not think he has been courteous to me, and I have nothing to do with him.

Q. What is the difference between your duties and his?—A. He is superintendent of this station, and it is his duty in the spring of the year to handle the work from Fort Washington in the collection of shad eggs, and my position is superintendent of distribution, I have charge of the records of distribution.

By Senator SQUIRE:

Q. Was Mr. Worth responsible for the shipment of these fish in this excessive quantity?—A. No, sir; he was not. Mr. Dana was in active charge of the hatchery.

By the CHAIRMAN:

Q. Have you seen any employés of the Fish Commission working on models of fishways or filters during office hours?—A. I have; yes, sir.

Q. Has this been going on to a considerable extent or only to a trifling extent?—A. Well, now, I will tell you what I know about that. Of course my position brings me up stairs. I am in the office, and I frequently have occasion to go down stairs, especially during our busy season, and I have seen men working on those things. I could not say how long they have worked upon them.

Q. Have they been generally at work in that way, or only exceptionally?—A. Well, I have seen it go on quite frequently.

Q. How many men have you seen working at those models or any thing relating to them?—A. I suppose I have seen three or four.

Q. Would the use of that filter be of value to the Commission?—A. The filters that have been made here, with possibly one exception, are being used—that is, those which have been perfected to filter water for the aquarium down stairs.

By the CHAIRMAN:

Q. Do you know the location of the new Colorado Station?—A. Yes, sir.

Q. Describe the location of the same as adapted to fish-culture?—A. I was there last summer and the ground had not been broken for the foundation of the building even, but I know where it is.

Q. Do you consider it a good location?—A. Well, personally I think it is too far from the railroad.

Q. How far is it from the railroad?—A. The nearest railroad station is Leadville, about 6 miles.

Q. Do you know why it was located where it is?—A. Only in a general way. I understood that the water supply was very fine.

Q. That is an important item?—A. A very important thing, sir.

Q. Have you ever visited the Gloucester, New Jersey, Station?—A. Yes, sir.

Q. Is that station on Government land?—A. I think not.

Q. Is it rented by the Government!—A. My understanding of the matter is that the building was put up by a Mr. Thompson, who is quite a prominent gentleman over there and who allows the Government to occupy the building during the shad-hatching season.

Q. Do you know what rent is paid for the use of the building?—A. I do not, sir.

Q. From whence is the water for this Gloucester Station taken?—A. It comes from the city water works, as I understand it. It is taken from a spring; it is fed by springs some little distance.

Q. Do you know the temperature of the water?—A. When I was there in the spring it was ranging from 58 to 60 and 61. I did not see it above that.

Q. What is the best temperature for shad-hatching?—A. I think the best results are obtained from water running from 68 and 70. We can hatch at a lower temperature than that, but a little higher we get a better class of fry from water of that temperature.

Q. When you were there was it so early in the season that the temperature would be lower than it would be in the season?—A. Yes, sir; the last trip that I made there the water should have been warmer than it was.

Q. What was the temperature the last time?—A. Sixty-one was the highest.

Q. And that you think is a little low for the best results?—A. We think so.

Q. Compare the condition of fry hatched there with those hatched elsewhere for shipment.—A. We did not have any for shipment at that station this season. The fry that were hatched there were so weak they would not stand transportation, and there were none of them turned over to me for shipment.

Q. To what cause do you attribute the difference in fry at that and other stations?—A. One cause, I think, was the low temperature of the water, and I think that there was something, some foreign substance, in the water; I do not know what it was. I think they sent it to Philadelphia for examination, and I never heard the result of the analysis.

Q. Cite cases of favoritism in the office.—A. Well, I do not know that I can do that.

Q. Do you know of any cases which you think would come within that inquiry; do you know of persons who have been advanced in position and salary on account of personal favoritism?—A. I do not think Colonel McDonald would advance a man simply for favoritism; I hardly think he would.

Q. Have you ever heard of Mr. Worth being intoxicated while on duty?—A. I have heard it.

Q. Do you know personally about it?—A. I do not.

Q. Has Mr. Worth ever undertaken to interfere with your division?—A. Well, I have thought so.

Q. In what way?—A. Well, in moving property from my room and in other ways.

Q. Things necessary for the conduct of your division?—A. Things belonging to my division and charged up against me on the property of this station.

Q. What were the articles?—A. Cans, etc.

Q. Do you know why he removed those articles?—A. I believe it was said by his assistant that they were to be used in moving fish from

Fort Washington here, and we had already placed at their disposal a number of cans which were in the yard at that time.

Q. Were those cans which he caused to be removed from your station better for the purpose than the others?—A. Well, yes, sir; they were better, it is true, but the others were suitable. The cans that he removed were cans that cost us \$5.50 apiece, and they were very nice cans, but I do not think it was necessary to knock them about in carrying fish from Fort Washington here.

Q. Did the business of your division suffer in consequence of their removal?—A. Oh, no, sir.

Q. Was it not once intimated to you that it would be best for you officially to drop friendly communication with certain parties?—A. Officially?

Q. I only know what is down here.—A. No, sir; the only thing in that connection was an anonymous letter that was sent to F. C. Brown, in which I figure very prominently, and a man who can not sign his name to a letter is hardly worthy of any great notice.

Q. How did you understand this remark?—A. What remark was that?

Q. Was it not intimated to you that it would be best for you officially to drop friendly communication with certain parties—and now follows this question, "How do you understand this remark?"—A. Well, I do not understand the remark at all; I do not recollect of ever having had any such thing said to me.

Q. Do you know Miss Nellie B. Barry?—A. Yes, sir.

Q. In what department is she employed?—A. In my office.

Q. Upon whose recommendation was she appointed?—A. I made the request for a clerk covering a period of five months, and in compliance with that recommendation she was appointed.

Q. Was she not appointed to consume an unexpended balance?—A. No, sir.

Q. Is she appointed for any stated time?—A. Five months.

Q. Has she relatives in the Commission?—A. Yes, sir.

Q. Who are those relatives?—A. Mr. O'Connor, her brother, is the only one I know, sir; one.

Q. What position does he occupy?—A. Chief clerk.

Q. Were you in charge of a trip to the western coast?—A. No, sir; I was simply in charge of a car.

Q. Who composed the party?—A. The Commissioner, Colonel McDonald, Capt. J. W. Collins, J. J. O'Connor, E. C. Bryan, Angus McDonald, and the cook, Edward Quivus, and myself.

Q. You speak of being in charge of a car; it was a Fish Commission car?—A. Yes, sir.

Q. Such as you used for the distribution of fish?—A. Yes, sir.

Q. It was all arranged for you to live upon the car?—A. Yes, sir.

Q. Were there any upon this trip who were not employés of the Commission?—A. Yes, sir.

Q. Who were they?—A. Colonel McDonald's son.

Q. How old a man is he?—A. I guess he is about seventeen or eighteen.

Q. What is your opinion of Mr. John Gay as an expert fish culturist?—A. I never considered him an expert fish culturist at all.

Q. What are his special qualifications as a fish culturist?—A. I do not think he possesses any.

Q. About what was the cost of the change he had made in the plans of the Put-In-Bay Station?—A. That I do not know.

Q. It consisted of some rock excavation in order to lower the building?—A. Yes, sir.

Q. Was Angus McDonald one of this party that went to the Pacific coast?—A. Yes, sir.

Q. Is he now, or was he at that time, an employé of the Government?—A. No, sir.

Q. Do you know of any trip or trips to the Pacific slope made by the Fish Commission car, with any correspondents of newspapers on board?—A. No, sir, except one. There was a trip made to Oregon, I think, in the Winter of 1888, and there was a correspondent of the Washington Star, Mr. Loop. But it was not at any expense of the Government other than his living expenses. He received no salary. He simply went on as I understood it to write up the methods of the Commission and enlighten the public as to the methods of doing certain work. His article has not appeared yet.

Q. Do you know whether Mr. F. E. Loop, of the New York Evening Post ever took a trip upon a Fish Commission car?—A. He may have been a correspondent of the Post also. Loop is the man I spoke of.

Q. Has there ever been a charge to your Department of expenditures for service of outfit, that in your opinion belonged to other Departments?—A. Well, I suppose you might take that German expense in, if you include that.

Q. That expense was charged to the account of distribution of fish?—A. Yes, sir.

Q. To what other department would you have had it charged?—A. I do not know of any other that it should have been charged up to, it was all distribution.

Q. So that would not be in your opinion an improper fund to make the charge to?—A. No, sir; that should come in there.

Q. Did you make an office requisition for the service of Miss Nellie B. Barry?—A. Yes, sir.

Q. At whose suggestion was such requisition made?—A. I made the requisition myself.

Q. You wanted the additional service?—A. I wanted a clerk.

Q. What is the number of cars used in the work of distribution?—A. Three.

Q. What was the number of cars in 1887?—A. Three.

Q. The same number?—A. Yes, sir.

Q. What was the number of men employed as crews on those cars?—A. Five on each car.

Q. How does this compare with crews under Professor Baird?—A. The same number.

Q. Do you know who located this station of Gloucester?—A. It was located, I think, there at the recommendation of Mr. Gay, who was in charge of that.

Q. When was it established?—A. Last spring.

Q. About what expense was it to fit it up?—A. I could not say.

Q. Have you ever had official dealings with Mr. John G. Worth?—A. Yes, sir.

Q. State the character of such relations?—A. I have had occasion to take orders to him to send fish to different parts, and arrange with him also for shipments of fish by our cars, etc.

Q. Do you know any reason why he should try to interfere with your work?—A. I do not, sir.

TESTIMONY OF S. P. BARTLETT.

S. P. BARTLETT, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Are you connected with the Fish Commission?—A. I am, sir.

Q. In what capacity?—A. I have charge of the distribution of indigenous fish west of the Alleghanies.

Q. How long have you been in the employ of the commission?—A. I have been on the pay-roll about a year—not quite a year. It will be a year in July. I have been connected with their work for two or three years as assistant simply.

Q. What State are you from?—A. Illinois.

Q. What is your compensation?—A. My compensation is \$1,800 a year.

Q. Does that cover your subsistence when you are out on duty?—A. I presume that my expenses are allowed for—absolute traveling expenses only.

Q. How do you manage about living; do you live upon the cars?—A. No, sir; my headquarters are at Quincy, Ill., where I belong.

Q. I understand you to say that you were in charge of distribution?—A. Yes, sir; this business is divided up into a number of branches, the indigenous fishes and the native fishes of Illinois, and if you will allow me I will explain about that. A number of years ago it was demonstrated that along the Illinois and Mississippi Rivers there were lost annually millions of fish, the water rising in the Spring and overflowing the bottom lands and receding again, and during the overflow the fish would go into the low places, as they do naturally and deposit their spawn, and as the water recedes the old fish go back leaving the spawn there to become fish, and as the water recedes those fishes are left to perish and are not taken care of, thousands and millions in Illinois alone; and in our work we commence taking those fish and utilizing them and using them for purposes of replanting in streams without our own State, and we got them by the hundreds and thousands by simply the use of the seine.

Q. What kind of fish?—A. Bass, wall-eyed pike. Those fish are taken with a small net and put into boxes, and these cars are utilized to distribute them all over the States throughout the West in public waters. We worked on that plan for a number of years, and the attention of the U. S. Fish Commission was drawn to the work.

Q. You mean the people of the State of Illinois?—A. Yes, sir; the Illinois Fish Commission; and then Colonel McDonald's attention was drawn to the work and he took it up about three years ago and for the last year I have had charge of the work.

Q. Do you consider it a valuable work?—A. Yes, sir; I do; but that would be hardly a fair question to ask me, an enthusiast upon that work, I regard it as one of the most valuable works.

Q. You say you have utilized a vast number of fish?—A. Yes sir, the fish can be taken in fries at a very nominal cost.

By Senator SQUIRE:

Q. How long does it take for the fish to be regarded as mature?—A. It varies with different fish. Take a black bass at the age of three years and it will re-produce again.

Q. How long is it in the case of a salmon?—A. Perhaps the same. Both salmon and bass grow very large in a shorter length of time than people ordinarily suppose. A black bass three years of age will weigh

three and a half pounds, and I have known of instances where they would be placed in ponds that length of time, ponds perfectly free before that, and afterwards from the breaking up of the dam or drying up, or something of that kind, they were taken out and proved to be well filled with fish of that kind.

By the CHAIRMAN :

Q. Was a part of your time spent here?—A. Only when I am here to arrange for the season's work.

Q. Do you know anything about the management of this central office; that is, do you know anything as to the hours they work; as to their regularity in coming and going?—A. I will say in explanation of that, that during the year—twice a year any way—I am here two or three weeks at a time, and always in the office, and I think I can answer that question as far as that time is concerned.

Q. Give us your observation?—A. I do not know as much about the Government departments, perhaps, as I do about the State departments. I do not know that I ever knew of a department where there seemed to be the same regularity of men going and coming that they have here.

Q. You were appointed to your present position by Colonel McDonald?—A. Yes, sir.

Q. It has been charged in newspaper articles, which caused this inquiry, that there was favoritism; that the Commissioner had his favorites, who were advanced in position and pay because they were favorites. Do you know anything of that sort?—A. My relations with Colonel McDonald have been very intimate for a number of years in this work, both before and after. I have never yet heard Colonel McDonald express a single word in favor of any man as far as favoritism is concerned. The only question is whether a man is qualified for the position.

Q. Do you know Mr. Gay, who is in charge of the Put-in-Bay Station?—A. Yes, sir; I know Mr. Gay, not at Put-in-Bay Station. I know Mr. Gay as the inspector of the stations.

Q. Do you consider him an expert fish-culturist?—A. As far as I know him; yes, sir. I am not intimately acquainted enough with his work to answer that definitely. As far as I know the man and from my conversation with him, I judge him to be an expert fish-man, as far as I am capable of judging.

Q. There have been newspaper charges against Colonel McDonald's general management, and charges that he employed a large number of relatives of his family here, that the general administration of the office here was loose, and people came and went about as they pleased (which was covered by your former answer), a general criticism as to the management of the affairs of the commission. Now, if you know anything about that or have anything to say about that, please state it in your own way.—A. As I before stated, my relations with Colonel McDonald are very intimate, both of us being enthusiasts upon the fish question, and I have had occasion to know a great deal about Colonel McDonald's appointments and his business, and I should think the contrary in almost every instance would be the case with him. I think he is very careful in his management of affairs here, I do not pretend to say but what Colonel McDonald may be mistaken about his estimate of a man the same as I would be in my judgment of a horse.

Q. You have seen nothing to indicate any favoritism?—A. No, sir; not a thing, and I do not think it ever existed.

Q. Have you seen anything that looked like extravagance of expenditures?—A. I have found the contrary to rule, personally.

Q. He scrutinizes your accounts closely?—A. Yes, sir; every account.

TESTIMONY OF EDWARD C. BRYAN.

EDWARD C. BRYAN, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where is your residence?—A. Washington.

Q. You are in the employ of the Fish Commission?—A. I am, sir.

Q. What position do you occupy?—A. That of clerk and stenographer.

Q. For whom?—A. Captain Collins, in the division of fisheries.

Q. What does Captain Collins have charge of?—A. He has charge of the division of fisheries. That comprehends the statistics and inquiries into the methods and relations of the commercial fisheries of the United States.

Q. Particularly the marine fisheries?—A. Yes, sir; the marine and inland fisheries, both.

Q. How long have you been in the employ of the Commission?—A. I was first employed in the Fish Commission in conjunction with a position with Professor Baird, in the Smithsonian. That was in 1886, and I have been connected with its affairs, with Professor Baird, since 1879.

Q. What was your salary at the time you entered the service?—A. Twenty dollars a month.

Q. What is it now?—A. One hundred dollars a month.

Q. When was your salary increased; it was not increased all at once?—A. No, sir; gradually.

Q. What were the steps of increase?—A. From \$20 to \$25, and then \$30, and then to \$40, and then to \$65, and then to \$100.

Q. How long have you been drawing \$100 a month?—A. Since December, 1888.

Q. Was that advance in salary given you by Commissioner McDonald?—A. It was.

Q. Were your duties changed at the time your salary was advanced to \$100?—A. They were not changed at the time, but have been changed considerably.

Q. How much were you getting before this last advance?—A. Sixty-five dollars.

Q. What were your duties when you drew \$65?—A. Well, sir, they were the same; that of stenographer and clerk.

Q. Do you have more work to do since your salary has been increased than you had before?—A. Yes, sir; a great deal more. My salary was increased on account of having a great deal of work to do in connection with the Cincinnati exposition.

Q. Has your work upon the average been greater than it was before your increase?—A. Oh, yes, sir; I should say about double.

Q. Have you seen a series of newspaper articles published in the New York Press and other papers, criticising the management of the Fish Commission?—A. I have.

Q. In one of those articles, published the 25th of May—I think that was the first article—it was charged that there were a large number of relatives of Commissioner McDonald and of his wife, of the family, who

had been appointed by him in the service of the Fish Commission. Do you know about that; do you know how many relatives of the Commissioner or of his family are in the service of the Commission?—A. Well, that article caused me to look it up for my own personal information, and I discovered that there was one of the colonel's, and that is about all.

Q. What is his name?—A. Well, not a relative exactly of the colonel's, a relative of Mrs. McDonald, Mr. McCormick.

Q. Is not there a Mr. Lewis in the employ of the Commission?—A. There is a Lewis.

Q. Is not he a relative?—A. Not that I know of.

Q. I think as a matter of fact he is. You do not know of any other except McCormick?—A. No, sir; that is about all I know of.

By Senator SQUIRE:

Q. Do you mean to say that you have made an investigation?—A. No, sir; I would not say that I made a sweeping investigation. I asked the question of the gentlemen in question and they said, one of them, Mr. McCormick, he said he was a relative of Mrs. McDonald, and Mr. Lewis said he did not consider he was any connection of the colonel at all.

By the CHAIRMAN:

Q. You have not asked all the employés whether they were relatives of Colonel McDonald or not?—A. No, sir; not all of them.

Q. May there not be others?—A. Not that I know of. I have not inquired.

Q. All you know are Lewis and McCormick, and you have been able to ascertain that they were relatives of Mr. McDonald?—A. That is all I know of, sir.

Q. In talking about it in the office I have no doubt these articles have been discussed. Have you heard it claimed that there were any others?—A. No, sir.

Q. None except those two?—A. No, sir; those two, while they are considerably nearer than anybody else employed in the Commission, I do not believe there are any persons who are connections of Colonel McDonald.

Q. It is also charged in those articles that there was a good deal of favoritism here with the colonel; that the colonel had his favorites and pets, and that he favored them and advanced them and advanced their salaries; what can you say upon that point as the result of your observation here?—A. My observation has been whenever there has been an advance in one's salary it has been on account of increased duties or something that really gave some cause for it.

Q. Would you say that you do or do not think that the Commissioner exercises favoritism in that regard?—A. No, sir; I do not think there has been any favoritism shown in that direction at all, sir.

By Senator SQUIRE:

Q. Have you heard any complaints?—A. No, sir; I have not.

Q. You never heard of any complaints?—A. No, sir.

By the CHAIRMAN:

Q. Do you and the other employés, as far as your observation extends, report here promptly at the time you should be here in the morning, and do you stay until the regular hours have expired?—A. I am here at a quarter after 8 in the morning usually, and sometimes half-

past, and I usually go home about half-past 6 or 7 o'clock, and about five nights in the week I am here at 8 or half-past 8 and stay until 11.

Q. Now, tell me this—it is one of the charges in the newspapers, and I want to ask you the question in the broadest sense so as to give you an opportunity to say anything you have to say about it—as the result of your observation in the office, are the employes held to regular hours of work here?—A. Yes, sir; they are, in every sense of the word; they are strictly held to it. I do not know of any cases where they even try to shirk.

By Senator SQUIRE:

Q. They are not allowed to come late and go early?—A. No, sir.

Q. Do you know of any cases where men have gone out a half an hour or an hour before the time for quitting had arrived, and staying out during the day?—A. I could not say that I have noticed anything of that kind; I have not asked persons what they were doing, but no person in the office where I am has done it.

Q. Would you know, in all cases, whether parties did or did not do it?—A. Not in all cases; I could not say.

Q. Did you go upon a trip West sometime in the service of the Commission?—A. Yes, sir.

Q. Where did you go?—A. I went as far as Leadville, Colo.

Q. What were your duties upon that expedition?—A. Upon that expedition I kept the journal of the journey and wrote letters—official letters, and things.

Q. Connected with the business of the Commission?—A. Yes, sir.

Q. Did you return before the others?—A. Yes, sir; we returned before Colonel McDonald and the other people. Captain Collins and I came east at the request of Mr. Porter at the Census Office.

Q. What did he want you to come back for?—A. He wanted the captain to take charge of the fisheries section of the Census Office.

Q. That is this census?—A. Yes, sir.

Q. How far west did you go?—A. Leadville, Colo. We got to the Leadville Station, when we decided to come back.

Q. Who is in charge of the Leadville Station, do you know?—A. I think Mr. Robinson.

Q. How long were you at the Leadville Station?—A. Well, I was there just as they were selecting the site. I was there four days, I think; four or five.

Q. Do you know anything about the personal habits of Mr. Robinson—that is, whether he is a drinking man or not?—A. No, sir; I could not say that he is. He is a very sober and upright man, as far as I know.

Q. Had you any knowledge of him before he went there?—A. Yes, sir. I was with him for a whole summer in 1885.

Q. Was he in the habit of drinking liquor?—A. No, sir.

Q. Who else was on this expedition to Leadville?—A. There was the Commissioner, Captain Collins, Mr. O'Connor, the chief clerk, and Mr. Moore and myself.

Q. And the object of the trip was to select a site?—A. That was one of the objects; yes, sir.

TESTIMONY OF F. L. DONNELLY.

F. L. DONNELLY, being duly sworn and examined, testified as follows :

By Senator SQUIRE :

Q. You live in Washington ?—A. No, sir.

Q. Where do you reside ?—A. Havre de Grace, Md.

Q. Are you connected with the Fish Commission ?—A. Yes, sir.

Q. What are your duties ?—A. In charge of the records in the division of distribution.

Q. Where are those kept ?—A. Three rooms below here in this building.

Q. You do not stay in Havre de Grace ; you stay here ; your duties keep you here in Washington ?—A. No, sir ; my home is in Havre de Grace.

Q. How long have you been in the employ of the Fish Commission ?—A. I first entered the Fish Commission in May, 1880.

Q. Was that under Professor Baird's administration ?—A. Yes, sir ; May 24.

Q. What salary did you get when you first entered the service ?—A. One dollar and fifty cents a day and expenses.

Q. What are you getting now ?—A. One hundred dollars a month.

Q. How long have you been receiving \$100 a month ?—A. Since the 1st of July last year.

Q. What did you receive before that ?—A. I was in the temporary service from 1880 until 1886, when I resigned voluntarily and went to St. Paul, Minn., to go into a railroad office there—the Northern Pacific Railroad office—and I re-entered the service of the Commission as one of the traveling men in April, 1888. I first received \$1.50 a day for two years during the time I rendered service.

Q. In 1888, what did you get when you entered the service again ?—A. Seventy-five dollars a month ; when I resigned I was receiving \$90 a month

Q. When did you resign ?—A. In December, 1886.

Q. And when you re-entered in 1888 you received \$75 ?—A. Yes, sir.

Q. What were your duties then ?—A. One of the traveling messengers.

Q. This was in 1888 ?—A. Yes, sir.

Q. On the fish cars ?—A. Yes, sir.

Q. Before you received \$75 a month ?—A. Yes, sir.

Q. How long did you receive \$75 a month ?—A. Until October, I think it was October or November. The record clerk, Mr. Terrill, resigned and I was appointed to his place.

Q. What year was that ?—A. That was in 1888. I returned here in April and went on the car out West until the fall, in November, I think it was, and when Mr. Terrill resigned his position I was advanced from traveling messenger to clerk in the office.

Q. They then increased you from \$75 a month to what ?—A. To \$1,000 a year.

Q. That was in October or November of 1888 ?—A. Yes, sir.

Q. What was Mr. Terrill's salary whom you succeeded ?—A. A thousand dollars.

Q. You succeeded him as record clerk ?—A. Yes, sir.

Q. That is the same position you hold now ?—A. Yes, sir.

Q. When was your salary advanced to \$100 ?—A. Last July.

Q. In 1889 ?—A. Yes, sir ; additional work was imposed upon me.

Q. What additional work?—A. I tabulated the work of the Commission.

Q. Who had done that before?—A. The Commissioner—the one who is now Commissioner. He had charge of the fish-cultural work, and the work of propagation and distribution all came under him, and after he became Commissioner he divided up and the distribution was made separate from the propagation, and the last year the tables and the operations of the Commission and the propagation and distribution also have been made up by me. Heretofore I only made up the distribution tables.

Q. Who did this work before you did it; this additional work?—A. Well, I could not say. It was done by Mr. O'Conner. It was done by some of the colonel's subordinates when he was in charge of that work.

Q. The work was taken from somebody else and put upon you?—A. Yes, sir; there was more work assigned to me, and I am doing more work than I did a year ago.

Q. On account of the natural increase in the growth of the business of the office?—A. Yes, sir.

Q. It is not specially owing to this making-up of these tables?—A. No, sir. That was additional work to our office that does not come under our office; yet we do it.

Q. From that time on you have had \$100 a month?—A. Yes, sir.

Q. The chairman has requested me to ask you in regard to the matter of the arrangement of these fish statistics. Have you kept those statistics and tabulated them in the same manner they had been tabulated and kept before?—A. No, sir.

Q. You made a change in the method?—A. Yes, sir; and I made, I think, an improved change.

Q. What does that change consist of?—A. It shows whether they were egg, fry, or fish, and, in a more detailed form, it shows the distinction between egg, fry, or fish. The whole thing has been lumped heretofore.

Q. It shows the fry distinct from the fish?—A. Yes, sir, from the grown fish and the egg.

By the CHAIRMAN:

Q. Do you think that the present system gives more correct information as to the operation?—A. Most assuredly so, in a more detailed form.

Q. Gives it more accurately?—A. Yes, sir; it is more accurate, and I am very careful in tabulating the work of the Commission.

Q. Do you think the statistics as they are managed now and kept show the actual results?

The WITNESS. Do you mean relating to the division of distribution? I do not know anything about the statistics in the other part of the Commission.

The CHAIRMAN. Anything that you have the handling of.

A. Yes, sir; I am careful in making up those statements. We have a system at the station requiring the superintendents of the stations to send in a shipping notice.

Q. It has been charged that there has been such a manipulation of fish statistics as to show greater results than are warranted.—A. That is not correct. They are all station reports. They all verify, and we are careful to check them before entering them; before we tabulate the work.

Q. Now, as I understand you, you say that the statistics have been accurately kept?—A. Regarding the distribution.

Q. So as to show actual results?—A. I do say so, regarding the distribution of fish.

Q. That is all you know about?—A. Yes, sir.

Q. Do you know anything about any favoritism in the office?—A. No, sir; I do not.

By the CHAIRMAN:

Q. In these newspaper articles it is charged that quite a long list of relatives of the Commissioner were appointed here. Do you know whether there were any, and, if so, how many relatives of Colonel McDonald or his wife hold positions here?—A. No, sir; I do not know anything about that.

Q. Do you know Mr. McCormick?—A. I know Mr. McCormick; yes, sir.

Q. Do you know whether he is a relative of the Commissioner?—A. Only from hearsay. I do not know myself.

Q. He is said to be?—A. I have read it in the papers. I do not know any thing about it.

Q. It is also charged that the employés here at this station do not come promptly in the morning and that they leave early in the afternoon, and that there is laxity in that regard. What is your observation in regard to that?—A. I do not think that is correct, especially in regard to our office. We are there before hours and after hours, and we have to do it.

Q. Do you absent yourself?—A. I have not had a day's leave in the last year.

Q. I mean during the day?—A. No, sir.

Q. Do you know of any instances where men leave their work at three o'clock or half-past three?—A. Only upon Saturdays. They close at three o'clock in the summer time.

TESTIMONY OF FRANCIS P. FENNEL.

FRANCIS P. FENNEL, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. You live in Washington?—A. Yes, sir.

Q. Are you in the employ of the Commission?—A. Yes, sir.

Q. How long have you been in that employ?—A. Since January, 5, 1886.

Q. Who were you appointed by?—A. By Professor Baird.

Q. What was your position at the time of the appointment?—A. Clerk in the office.

Q. At what salary?—A. At \$50 a month.

Q. What is your position now?—A. I am clerk in the chief clerk's office.

Q. What is your present salary?—A. One hundred dollars a month.

By Senator SQUIRE:

Q. How long has it been \$100 a month?—A. For about two years; July, two years ago.

Q. Did you receive that advance in your salary prior to the coming in of Mr. McDonald as Commissioner or afterwards?—A. Afterwards.

Q. After he became Commissioner?—A. Yes, sir.

Q. Have your duties been changed any?—A. Well, they have been increased, but the same clerical duties.

Q. Only you have more to do?—A. Yes, sir.

By the CHAIRMAN:

Q. There has been quite a large increase in the amount of work you have to do?—A. Yes, sir.

Q. The salary is double; is the work double?—A. Yes, sir. I would like to say in that connection that the present Commissioner had three times before recommended that I be increased prior to his coming in.

Q. So after he got in office he himself increased it?—A. Yes, sir. He knew my duties and knew what they were, and that I deserved the increase.

Q. How many hours a day do you work?—A. From 9 to 4.

By Senator SQUIRE:

Q. Do you spend much time outside during the day?—A. No, sir.

Q. You are here every morning at 9?—A. Yes, sir.

Q. And go away every afternoon at 4?—A. Yes, sir; very frequently I am kept after 4.

Q. You never go away earlier than 4?—A. No, sir; very seldom; never.

Q. Do you absent yourself during the day?—A. No, sir.

Q. Without leave?—A. No, sir.

Q. Do you often get leave to be absent?—A. No, sir; I have strict orders in going out to lunch to be sure that I am relieved before I go.

Q. How long ago did you get those orders?—A. Since we came to this building.

Q. How long ago was that?—A. I think that is since July last.

Q. Was it a long time ago or since this investigation commenced?—A. No, sir; it was a long time ago.

By the CHAIRMAN:

Q. Do you know whether there are any relatives of Commissioner McDonald or his wife in the employ of the Commission here?—A. I do not; no, sir.

Q. Do you know Mr. McCormick?—A. Yes, sir; I do not know that he has any relations here; I have been told that Mr. McCormick was a relative.

Q. The two Lewis's, do you know them?—A. Yes, sir; I know them.

Q. It is said that they are relatives of the Commissioner?—A. No, sir.

Q. It is so charged, as a matter of fact, in the newspapers?—A. No sir; I never heard it said, except in the papers, that they are relatives

By Senator SQUIRE:

Q. You are well satisfied with your salary, I suppose?—A. Yes, sir.

Q. You have no complaint to make?—A. No, sir.

Q. Did you ever hear any complaints made by the others?—A. Not that I know of; I believe a draughtsman up stairs has complained.

Q. What is his name?—A. Rogers.

Q. He thinks his pay is small?—A. Yes, sir.

Q. You never heard of any others making complaints?—A. No, sir.

Q. Have you heard any complaints of favoritism?—A. No, sir.

By the CHAIRMAN:

Q. Do you think, from your observation, that the Commissioner has

some favorites whom he favors as against others?—A. No, indeed, sir; I think he is the embodiment of justice in that respect.

Q. He holds you all up to your duty?—A. Yes, sir. We all have to do our duty.

Q. No one has ever intimated that you received more than you ought to when you received your raise?—A. No, sir. On the contrary they told me that I had deserved it, since it had been recommended several times before.

Q. What is the nature of your clerical work?—A. I am a type-writer and a short-hand writer.

Q. You are a correspondent?—A. Yes, sir; just a correspondent.

Q. I will put this general question: Have you read these articles that have been published attacking the management of the Commission?—A. Yes, sir.

Q. In those it is charged that there is general laxity and favoritism and loose management?—A. Yes, sir.

Q. What can you say upon that point, generally, in your own way? If you know any thing touching that point please state it?—A. Well, sir, all I can say is that, as far as my observation goes, it is entirely false.

Q. I simply want to be able to say that I had given you the greatest latitude to state any thing that you desire?—A. Yes, sir; you have done so.

TESTIMONY OF JOHN GAY.

JOHN GAY, being duly sworn and examined, testified as follows:

By Senator SQUIRE:

Q. Where is your residence?—A. Washington; I am in the field a good deal.

Q. Are you connected with the Fish Commission?—A. Yes, sir; I am inspector of stations.

Q. How long have you been in the employ of the Commission?—A. It will be two years on the 1st of July next.

Q. Have you been inspector of stations all that time?—A. Yes, sir.

Q. You have charge of no other branch of the business?—A. Well, my duties have been varied. For example, the monthly reports made by superintendents are referred to me, and a record kept by me of them, and then I have had special duties in the field. For example, I made an investigation and located the Colorado Station.

Q. By special instruction?—A. Yes, sir.

Q. Your general duties would not imply the authority to locate stations?—A. I do not know that they would or would not. I think it would come within the scope of my duty.

Q. You are superintendent of stations which are in operation?—A. I am not exactly superintendent, but all the reports come to me; they are referred to me, and I keep a record of them and look over the work that is done.

Q. You do what you do upon instructions from the Commissioner?—A. Yes, sir; I receive my orders from the Commissioner and carry them out to the best of my ability.

Q. You had to do with the establishment of the station at Put-in Bay?—A. I had; I instigated that movement.

Q. Do you mean the investigation with reference to having one there at all?—A. When I was in charge of the whitefish work in the fall of 1888, I saw the importance of the U. S. Fish Commission hav-

ing a station on Lake Erie, because it is probably the best place to secure whitefish eggs. The spawning-ground about the islands are the very best I know of. We were then operating a hatchery at Sandusky, Ohio, a whitefish hatchery, by special arrangement, and I instigated the movement while there upon the lake. I came back to Washington and submitted the matter to Colonel McDonald and he approved of it.

Q. You regard yourself as an expert fish-culturist?—A. Well, I have been engaged in fish matters for twenty years. I was president of the Pennsylvania fish commission for nearly four years, and I might say I had full charge there, because I had to do the work, and I think I know something about it. I do not say that I know all. I built the Pennsylvania State fish commission's whitefish hatchery in Erie; I had charge of the building of it and the equipment and all, and it has been a complete success.

Q. In regard to this matter at Put-in Bay, did you change the plans that were originally arranged for the building there and the apparatus?—A. No, sir; I had no authority to change that; I called the Commissioner's attention to defects in the arrangement of the hatchery.

Q. The building was changed under your direction?—A. No, not under my direction. It was at my suggestion.

Q. It was lowered?—A. Yes, sir; if you will allow me to explain I think I could make it clear to you.

By the CHAIRMAN :

Q. It was upon a side hill, and it was thought that the excavation was not sufficient, that there was too much of an elevation to get the fish up, etc., and it was thought better to lower it. Is that the case?—A. The change that I made was, I think, there was a drop from the floor of the building to the pier leading out into the lake of about 3 feet, and in white-fish work there is very hard labor in handling the cans. That is a hatchery on a large scale and a great many hundred cans would be handled in a season and would involve the carrying of the cans from the boat and to the boat, and that this drop of about 3½ feet there would have to be a transfer.

Q. And it would require that much lifting?—A. Yes, sir; extra labor, unnecessary, and I called the Commissioner's attention to that, and suggested that the building be lowered sufficient to put it on a level or very nearly on a level with the pier.

By Senator SQUIRE :

Q. How much additional cost did that involve?—A. It was only some excavating, I do not know whether it cost \$400 or \$500 or not. It was well worth the money.

Q. Excavating the rock?—A. Yes, sir; it was loose rock.

Q. The Commissioner approved of your suggestion and ordered the change made?—A. Yes, sir; he agreed with me that it should be done.

Q. Who made the plans originally?—A. Mr. Blaisdell.

Q. Did Mr. Blaisdell approve of the change?—A. I do not know whether he did or not; I was at work upon the lakes at the time.

Q. You represented the matter fully to the Commissioner and he authorized the building to be lowered?—A. When I went to the lakes on my way to Duluth and Colorado I went over the ground carefully, and saw the plans and consulted with men who were practical fish culturists and adepts in white-fish works, and I saw the mistakes, and I called the attention of the Commissioner to that in a report, and I believe he instructed the changes to be made at the time. When I came back to take charge of the white-fish works in November I came down

from Sandusky, and I found the plans were practically the same as they had been originally, and after going over the ground very carefully and consulting with Mr. Douglass, the superintendent, and with Mr. Valentine Doler, they thought it was my duty, as I thought myself, to state the matter to the colonel, to the Commissioner, and I sent him a telegraph and put myself on record; I telegraphed to Colonel McDonald in these words about: If it is at all possible for him to give at least one day's attention here at Put-in-Bay to the location and arrangement of the white-fish hatchery I would most respectfully recommend that he should do so at once. That was about the substance of my telegram.

Q. Did you get an answer?—A. He answered that he would be there the next day, and that his time was limited, and he would like to return in the evening, and I arranged it with the regular Detroit boat to wait a half an hour for him and he came up for that purpose and went back in the evening.

Q. He authorized the change to be made?—A. Yes, sir.

Q. The total cost of that change was how much?—A. I could not tell you that.

Q. Do you know whether he had approved of the previous plans?—A. I think the plans were marked as approved.

Q. This was a change which you thought necessary to be made and he approved of it?—A. I did, most decidedly so, and he was the only man who could make the change.

By the CHAIRMAN:

Q. In the building of that station how was it managed? It has been charged that it was managed extravagantly; that there was an undue use of money in the construction of that building.—A. I had not charge of that work at that time; I had charge of the Colorado station; but my experience with the Commission is that it is managed very economically, generally, in all its branches.

By Senator SQUIRE:

Q. Do you know anything about this?—A. I think the utmost economy and discretion have been used in the expenditures there.

Q. Do you know in regard to the expenditures? Are you competent to testify as to whether they are economical or not, from actual knowledge, aside from any general judgment that you may have?—A. When I was on the ground and saw the character of work, I think I am competent to say whether there is extravagance or not.

Q. Were you there?—A. No, sir; I was not there during the work.

Allow me to make a statement in connection with this. I saw a note in the paper—a charge rather—that the location there had been badly managed; that is, securing it, and that additional land was required that was bought at a considerable expense. Well, now I am entirely familiar with the whole thing.

By the CHAIRMAN:

Q. It is in testimony here that the original amount of land and the additional amount was donated?—A. The land was donated by citizens of Put-in-Bay, and it came to my knowledge last fall that the fishermen had contributed the land, sufficient for all the purposes, and it did not cost a dollar, and we asked for an increase of a little strip. I hesitated to recommend that. It was merely to get up to the road. It would probably never be used, as the arrival and departure would be by water.

Q. The additional strip was procured?—A. The additional strip was procured, and it was given without any hesitation whatever.

Q. Was there any delay about the negotiations?—A. The only delay was on the part of the Attorney-General authorizing the district attorney on the lakes to act, and I carried a communication over to the Attorney General and requested that prompt action be taken.

Q. Do you know anything about the Gloucester Station?

The WITNESS. Which Gloucester?

The CHAIRMAN. New Jersey.

A. Yes, sir.

Q. Do you know anything about who owns the land which is occupied by the station?—A. It is supposed to be owned by William J. Thompson. I never saw his title, but he said it was his land.

Q. Has the Government gone on there and built a large establishment?—A. No, sir; the Government has never spent a dollar for the establishment.

Q. Who has?—A. Let me explain. Last March, I think, I was in Philadelphia, suffering from an affection of the eyes, and I was in frequent consultation with Henry C. Ford, the president of the Pennsylvania State fish commission, and I was doing much work upon the Delaware River. The United States Fish Commission and also the New Jersey commission have been interested there, and there has been some little trouble there; we did not pull together, as was desirable, and I suggested to Mr. Ford the necessity of establishing a shore station at Gloucester City. We spoke of Chester as a good point, and also of Gloucester City. Some time ago I understood William J. Thompson had offered to furnish a building for the purpose for the Commission if the Commission would establish a station there, and so, in company with Mr. Ford, I went down to Gloucester City and had an interview with Mr. Thompson in reference to this matter. We spoke of Chester as being a good point, and he then offered to put up a building at his own expense and give the use of water—the water necessary—free if the Commissioner cared to put a shore station there. He said he would do that for five years, and put it in writing, and I submitted the matter to the Commissioner and advised that the offer be accepted. It is one of the most liberal offers we have ever had.

Q. Did he propose to go to all the expense?—A. He did. He went to the expense of putting up a building. The contractor said, and his carpenters said, that his offer to put it up was \$1,800, and Mr. Thompson having a lot of material, he paid Mr. Grover \$400 for putting up the building. Mr. Thompson furnished the material and introduced the water.

Q. The Government has not expended a dollar?—A. Not a dollar for the building; the Government has put in a transfer. Two hundred and ten charts that we had there were not being used, and they were transferred to that station, and we put in the equipment, the piping, and the tank.

Q. What is the expense that the Government has been to there?—A. About \$700; \$700 or \$800, I think, would cover all the expenditures. That, under the contract with Mr. Thompson, is removable at any time.

Q. Would it be very expensive to remove it?—A. No, sir; it could be used anywhere. That station was built according to the plans and specifications of the United States Fish Commission, and it is considered a model building.

Q. What did the Government expend there, and would the expenses that have been made there be useful in case the Government desired to move the apparatus?—A. Yes, sir; they can establish a station at

the Potomac or on the Susquehanna, or any other point, and this can be transferred. It can be put anywhere on the river.

By Senator SQUIRE :

Q. What business motive had this Mr. Thompson, what inducement did he have, for doing this ?—A. He has a large fishery interest there at his place.

Q. Furnishing fish for the market ?—A. Yes, sir, and for his own use. He has a summer resort there. He has a resort about 4 miles below Philadelphia.

By the CHAIRMAN :

Q. The idea is, at the proper seasons he takes the fish and you have the spawn. Do you get spawn from him at this fishery ?—A. There are very few live fish to be found, and we get the most fish at Howell's Cove.

Q. Your object is to get the spawn ?—A. Our object is to have a station there. That is more desirable in several respects.

Q. And the object of the station is to get the spawn ?—A. Yes, sir; to fertilize it and hatch the eggs.

Q. Do you have occasion as at the other stations to dispose of the fish ?—A. There is one of the strong points in having that station there. The Pennsylvania fish commission assists in distributing, which is quite an item here.

Q. I mean the fish that are sold.—A. We have nothing to do with them.

Q. What becomes of them ?—A. Mr. Thompson sells them.

Q. Who gets the benefit of the fish ?—A. They are his fish. They are not ours. We do not do any fishing. Mr. Thompson's force does the fishing.

Q. There are fish taken in that neighborhood and it is a good neighborhood for you to get the spawn ?—A. Yes, sir; there is Thompson's near the place at the coast and Howell's Cove. They make several hauls during the day and our spawn-takers are on hand when they make their hauls and they pick up the females. The men can tell by gentle pressure whether the eggs are right or not, and by pressure they squeeze the eggs in a pan and then they fertilize them, and we compensate the fishermen for any loss they may sustain in handling the fish. We pay them \$10 a million for the eggs without having anything to do with the fish at all.

Q. How do you count them ?—A. By the jars. A jar holds 6 quarts, and there are twenty-eight thousand in a quart.

Q. You favored the location of the station there because it was a good point to get the eggs from the fishermen ?—A. I consider it one of the best points in the United States to procure shad eggs. It is one of the best points to distribute the fry to the upper waters of the Delaware River, which I consider the best shad river on the continent to-day, and the Susquehanna and the Hudson River, or any other point of water that the Commissioner may deem desirable.

Q. Did you investigate as to the qualities, that is, the temperature of the water there, as to whether it was right and desirable for fishing ?—A. Yes, sir; I made all the inquiries I could. Even the water company has not a record of the temperature of the water at all.

Q. Have this year's operations proven that the temperature of the water there is favorable for the hatching of the eggs ?—A. There has been a little difficulty in the water. I do not think it was owing to the

low temperature, because the temperature attained was 62, and very good shad have been produced at that temperature.

Q. Is it better to have it higher?—A. Yes, sir; say 65 to 67. The fish were hatched out and the percentage was just as large, if not greater, than it was on the *Fish Hawk*; it showed that the eggs were toughened a little and the fry a little weak; that is the only difficulty we experienced with it. We had a cold season, and if it should be found that the water appeared too cold we have a distance of only about 250 feet that the water could be pumped from the river direct to the station.

Q. Which would be a higher temperature?—A. Yes, sir.

Q. Were the shad which were hatched there this year strong and good, and good fish for distribution?—A. The only trouble that I saw with the ones as I tell you in this hatchery which were weak was that they were a little weak owing to the toughened condition of the eggs, and that they may have been caused from the new tank.

Q. Were the fish which were hatched there distributed?—A. We put them in Timber Creek, and heretofore the *Fish Hawk* has been depositing in the river all the fish that we produced at that station. I put them into Timber Creek, in which young shad are found every season, and it is very suitable for shad.

By Senator SQUIRE:

Q. There was some scandal charged in connection with a saloon there?—A. Mr. Thompson has a summer place, and he has drinks of all kinds to sell. I do not think it is a summer garden, but it is frequented by people of all classes. Some of the best people in Pennsylvania are there, and our station is located in the rear portion of his property, and access is had to it from the back street. We have found no objectionable characters in it at all. I was there, and I know personally. We have had the best citizens that visit the place in the hatchery, and they all approve of it.

Q. Has the business of the hatchery been interfered with or damaged in any way?—A. Not in the slightest. It has no connection with it. There was no improper person there at all.

Q. It has been charged that the Fish Commission boat could do the business there?—A. It is true that the *Fish Hawk* could do the work, but the field was being so extended that it was thought best to let the *Fish Hawk* be free to go on the work of investigation, for example, in our investigation on Long Island Sound. It is simply the growth of the Commission.

Q. The growth of the business is such that the vessel is better employed at other points?—A. Yes, sir; I think that is one of the most important shad stations that the Commission has, and it is a most generous offer on the part of Mr. Thompson.

Q. You have read the newspaper statements in regard to the mismanagement of the Fish Commission and charges in regard to looseness of management and maladministration?—A. I read one article on my way over here from Philadelphia a week ago last Wednesday in the New York Press. I saw some remarks about the Commissioner being worried and excited. I have not been reading much about it.

Q. Have you any criticisms to make of the administration?—A. I have none whatever.

By the CHAIRMAN:

Q. It has been charged in the New York Press that there are twenty or thirty relatives of the Commissioner employed in the service of the Commission. Do you know as to that?—A. I do not.

Q. Do you know Mr. McCormick?—A. Yes, sir. It is said that he is a relative of Mrs. McDonald, but I do not know that he is.

Q. Do you know two young gentlemen named Lewis?—A. Yes, sir.

Q. They are said to be connected by marriage in some way. Do you know anything about that?—A. No, sir, I do not know.

Q. Do you know of any person who is a relative, other than McCormick and the Lewises?—A. No, sir, I do not.

Q. You are here at this station often?—A. This is my headquarters. I was in the field eight months during the last fiscal year.

Q. It is charged that the regular employes in this station have a good deal of latitude as to hours, that they come late and go early, and go off during the day. What is your observation upon that charge?—

A. As far as I know I have found the employes reporting, as a rule, promptly about 9 o'clock and not leaving until 4 o'clock.

Q. Is the station out near Leadville under your supervision?—A. I located it, and it has been under my charge.

Q. You go there occasionally?—A. I was there three months last summer establishing it.

Q. Who is the man in charge there?—A. Mr. E. M. Robinson.

Q. It has been charged that Mr. Robinson drinks a great deal and is an intemperate man habitually. Have you any knowledge upon that point?—A. I think that is not correct. Mr. Robinson reported to me last fall before I left there, and I put him in charge of the station before I left to the lakes, and I think him a very competent man, and I did not see him out of the way at all in any way.

Q. You have not been informed that his habits were bad and that he frequently was intoxicated?—A. No, sir. Perhaps I heard it rumored that he had been in that condition, but I have no knowledge of it. It was very vague, you know.

Q. We had a witness before us who had been employed there in a subordinate capacity, a Mr. Bright, who was discharged from there, and he came back and charged that this man Robinson was drunk the most of the time; that he and some other man, a Mr. Lewis, were in the habit of going off to the city or town near by and coming home always drunk, and that he was a drunken character?—A. No, sir; that is not correct. From the character of work done there Mr. Robinson could not be drunk and do the work he did. He is one of the most energetic men we have.

Q. Do you know anything about this man who was discharged that we speak of?—A. I have just returned from the Capitol. I saw Senator Teller there and had a little talk about the Colorado business, and Mr. Bright was referred to and Mr. Teller turned to his secretary and said, "Has Bright paid you that money that he borrowed of you?" and he said, "He paid \$25, and owes me \$40, and he don't come to see me;" and I explained to the Senator, as I understood from the Commissioner, he was discharged for insubordination.

Q. You do not know him personally?—A. Yes, sir.

Q. Do you know anything about his habits?—A. I inquired of him when he was appointed through Senator Teller and he informed me he never tasted liquor, and I do not think he is a drinking man. I think he is a man who is fond of talking.

By Senator SQUIRE:

Q. You do not go there very often?—A. No, sir.

Q. You do not go there often enough to keep track of the habits of these men?—A. No, sir. It is a matter of hearsay, and I attach no im-

portance to a man like Bright. I suppose he would take a drink occasionally.

Q. Do you think he manages the station well?—A. I am satisfied with his management. I have kept track of him and his reports have come to me.

Q. If he was drunk half of the time he could not manage it well?—A. No, sir; I would certainly know it. I think Mr. Robinson is one of the best trout-culturists that we have, and I would trust him. He came under my notice there. I had charge of the work and he reported to me and I turned the matter over to him.

Q. Was that a good building that was built there?—A. An excellent building.

By the CHAIRMAN:

Q. This man that I speak of, Mr. Bright, charged as to the building that a large force of men was employed a long time and that it cost more than it ought to; that it was a very miserably, poorly built building.—A. I think the Commissioner can show you a photograph that he has of it here, and the general impression is that it is a first-class building and that the contractor lost money.

Q. It was built by contract?—A. Yes, sir; \$12,000; and if there was any waste of time it was not at the cost of the Commission.

Q. He said something about moving some cabins; that there was some expense about that.—A. Some charcoal burners had squatted there when it was Government land, and they were still occupying it when I left there, and there was one very good one, very fair in its character, and Mr. Robinson was fixing up the other cabins, and it never cost the Commission a dollar. I think they ought to have been burned to get rid of them.

TESTIMONY OF HERBERT A. GILL.

HERBERT A. GILL, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where do you reside?—A. My residence is 1608 Q street northwest.

Q. Are you in the employ of the Fish Commission?—A. Yes, sir.

Q. How long have you been?—A. I have been indirectly connected with the Commission since the 1st of July, 1875. That is the first year. From about that date up to May of 1876 I was employed in connection with the Centennial exhibit, and from May I was regularly on the Commission.

Q. You were appointed by Professor Baird?—A. Yes, sir.

Q. What were your duties?—A. As disbursing agent and general auditing officer of the Commission.

Q. You are cognizant of the cost of the labor throughout the entire Commission?—A. Yes, sir.

Q. Are your duties the same now as they were when you entered the Commission?—A. No, sir. When I first entered the Commission I was simply a general clerk. I understand you to say when I first became connected with the Commission.

Q. What were your duties then?—A. As a general clerk.

Q. Now you are the auditing and disbursing officer?—A. Yes, sir;

and they were such during a large part of Professor Baird's administration.

Q. You have been continued in the same position under Mr. McDonald?—A. I have been disbursing officer since June, 1878.

Q. What is your present salary?—A. Two thousand four hundred dollars a year.

By Senator SQUIRE:

Q. I have been handed a list here which I know nothing about personally, and I will just hand it to the witness the same as it was handed to me. It is headed at the top, "Showing some of the favorites," and giving their salaries from 1887 to 1890, and the increase; and another list is headed, "Some of the late trusted employés of Professor Baird," giving their names and salaries for 1887, 1888, and 1890. I hand this to the witness and ask you what you desire to say in regard to the correctness of that list?—A. W. H. Abbott, I think, was first brought in in 1887 at \$50 a month, \$600 a year, and his present compensation is \$900 a year, and, as they say here, it was increased by Colonel McDonald upon the reorganization of the statistical work of the Commission. I think Mr. Abbott's salary was increased a year ago—a little over a year ago.

Q. Were his duties increased?—A. Yes, sir; he was sent out in the field, and much closer work. Mr. Addison is a clerk in my office. He is my principal clerk; examines the accounts, prepares the pay-rolls. He is kept extremely busy, and his increase has simply been due to merit and attention to work. A. B. Alexander was first employed—

Q. You had better state whether these increases as noted here and these changes are correct?—A. I can say approximately; I would not give a positive answer, unless I am permitted to examine my books. Mr. Alexander was employed at one time, I think in 1887, as a ship's writer on the schooner *Grampus*, and he was ordered as a fishery expert to go on the Pacific coast in connection with the operations of the steamer *Albatross*, and I believe he has been extremely useful in his work in the investigation of the fishing-grounds on the western coast. C. G. Atkins is now superintendent, and has been for a number of years, in fact since 1872, of the work of the Commission in the State of Maine, and I think it was in 1872 that he was first employed at a nominal salary for a part of that year, and later on, since about 1873 or 1874, or 1874 or 1875 rather, he has been regularly employed at a salary the same as that which he is receiving now, although his duties have been increased. In 1886 and 1887, prior to Professor Baird's death, the station at Wood's Holl was without a superintendent and Professor Baird was unable to decide definitely whom to appoint, and he brought Mr. Atkins to Wood's Holl, where he was subjected to extra expense, and already having his house in Maine, and being a married man, he increased the salary \$50 a month, which brought it up for this period to \$2,400 a year, but when he was ordered back to Maine and released of his duties at Wood's Holl, his salary went back to the old rate. So it is no cut, other than that the cut in compensation was commensurate with the cut in duties. The regular salary was \$1,800.

The next is Patrick Barry. He is a laborer. He was first employed at Wood's Holl and is now at Wood's Holl at \$40 per month. He has been, as I understand, a faithful man, and his salary was increased \$5 a month; in other words, from about \$1.33 a day to \$1.50 a day, and

then after some five years of continuous service. Dr. Bean's salary in 1887 was \$2,000. He has been increased since the 1st of July to \$2,400. The increase stated here is correct.

W. H. Brittain is a young man about nineteen or twenty years old. He was first brought into the Commission simply as a mail messenger, going early in the morning to the post-office for the mail and taking it to Professor Baird's house; in the evening he took it from the house to the post-office. Professor Baird worked a great deal at night at his home, where he examined and signed the letters written during the day. Brittain was afterwards given a permanent position at \$20 a month, and his pay has since been increased to \$35 a month. During a part of the present year, about a month and half, he was employed in connection with the shad work at Fort Washington, carrying the fish eggs therefrom to Central Station for hatching. To do this he was relieved from duty in the office. Living in the northwest part of the city and being required to go to the steamer Corcoran, a long distance from his home, which necessitated the use of the street cars to cover this expense, as also that of his dinners at Fort Washington, his pay was increased.

Q. How much was the increase?—A. Temporarily \$10 a month, and he is now back, since that special work ceased, to his old pay of \$35 a month.

George E. Butler was first employed at \$35 a month, for but a part of his time only. He was also employed by Professor Baird personally as a house servant. After Professor Baird's death his whole time was given to the Commission, though he slept at Mrs. Baird's house as a guard. When the offices were reorganized it became necessary to have messengers and janitors, and a uniform salary of \$50 was made, and that included the messenger service, the cleaning of the offices, windows, and things of that kind. He is getting that salary now, as are the other office messengers.

J. W. Collins came on the Commission first in 1879. His first duty, I think, was in connection with the fishery exhibition at London, and his salary was paid from that appropriation, from a specific appropriation. On the termination of that work he entered the service of the Commission at a salary of \$3 a day, engaged mainly, I believe, in the preparation of statistics and a sort of a fishery expert. He was employed in designing the schooner *Grampus*, and on the completion of that work he was placed in command, I think, at the rate of \$125 a month, and afterwards increased duties were given him. He is a man who has given a great deal of attention to fisheries and is well known among the fishermen. He has taken up with a good deal of literary work. He is above the ordinary man in fish work, and his salary was increased by Professor Baird, and when Mr. Earle, who was in charge of the statistical work, resigned from the Commission in order that he might enter the National Museum, Captain Collins was put in charge of the division of fisheries, to which the work of statistics, etc., belongs, at a compensation of \$2,400 a year. On the 1st of July last the compensation of the two chiefs of divisions, of fisheries and scientific inquiry, was raised to \$2,700, or \$225 a month.

Q. That is, a raise from \$1,800 to \$2,700?—A. Yes, sir.

Senator SQUIRE. Suppose you look over this list, and in the first place see whether it is correct substantially. You are handed a list purporting to be the employés of the Commission, showing their sal-

aries during certain years commencing in 1887 and ending in 1890, and showing an increase in some places of salary, and showing a decrease in others. You are asked to state whether or not that list is correct, and asked to compare the statement that I hand you with your books and ascertain whether the statement is correct, and you will be prepared to answer the committee.

At 2 o'clock p. m. the subcommittee adjourned to meet at the office of the Fish Commission to-morrow at 11 o'clock a. m.

OFFICE OF THE FISH COMMISSION,
Washington, D. C., June 21, 1890.

The subcommittee met at 11 o'clock a. m., pursuant to adjournment. Present: Senators STOCKBRIDGE (chairman) and SQUIRE.

TESTIMONY OF HERBERT A. GILL—Continued.

The CHAIRMAN. You can resume now, Mr. Gill.

The WITNESS. Mr. Chairman, apparently there are three sets of papers. I have designated them as A, B, and C, and have drawn up corresponding statements, and I can answer questions in that way perhaps more effectively.

Referring to Table A, showing some of the favorites, I will simply mention the exceptions.

Anthony Addison. The salary of Mr. Addison is put at \$1,380 in 1887. The salary July 1, 1887, was \$1,320, a difference of \$60; \$60 less in 1887. In April, 1890, it was \$1,500. The actual increase is \$180. As submitted by your list it is \$280, a difference of \$100.

By the CHAIRMAN:

Q. Why was that increase made?—A. Mr. Addison is an old employé; is very faithful and efficient, and the work has increased by reason of new stations. In regard to Mr. Atkins, I explained yesterday, stating that he was relieved of the charge of the Wood's Holl (Mass.) station at his own request, and he went back to his old post and at his old salary.

The next exception is that of T. H. Bean.

Q. What about A. B. Alexander, increased from \$720 in 1887 to \$1,200 in 1890?—A. A. B. Alexander, when he first went on the Commission in 1887, was the ship's writer of the schooner *Grampus*. In the fall of 1887, after Professor Goode became Commissioner, and when the *Albatross* was preparing for a cruise around the Horn to the Pacific coast, where she was ordered by specific act of Congress, Mr. Alexander, who had been a fisherman all his life, was designated as the fisheries expert of the vessel, and he was ordered thereto.

The expense of living on the *Albatross* is and was much higher than on the *Grampus*. Professor Goode then increased his compensation by reason of this new work to \$90 a month. Later on, after the *Albatross* had gotten to work there on the Pacific coast and had gone to Alaska, the commanding officer, Captain Tanner, wrote recommending that Mr. Alexander's compensation be increased to \$100 a month, and it was on this recommendation that the increase was made.

Q. That increase was made by Mr. McDonald?—A. Yes, sir.

Q. Upon the recommendation of Captain Tanner?—A. Upon the recommendation of the commanding officer of the *Albatross*.

Q. The next is C. G. Atkins; how about him?—A. Atkins I have already explained. Patrick Barry is simply a laborer, and was first employed at \$40 a month, or \$1.33 $\frac{1}{3}$ a day, which was afterwards increased to \$1.50 a day.

Q. Was that done on account of increased efficiency?—A. He is a good man. It is laborer's pay.

The next is T. H. Bean. Dr. Bean's compensation February 1, 1888, before Mr. McDonald became Commissioner, was \$2,100. July 1, 1887, it was \$2,000. Colonel McDonald increased his compensation from \$2,100 to \$2,400, an increase of \$300, for, I suppose, good and sufficient reasons; but I can not say why.

Q. Is he the editor?—A. He is the ichthyologist of the Commission and the editor.

Q. Of publication?—A. Yes, sir.

Q. Is it true that the labor in that branch of the service has increased as the stations have increased, and so on? Does Mr. Bean have more to do?—A. I should say he had, because there is more work going through the Public Printer, and the editing of papers has increased. I know, for example, that he has been very busily engaged in the preparation of the special report on salmon fisheries in Alaska, the investigation of which was ordered by act of Congress.

Q. And that was new work?—A. Yes, sir; that was new work. W. H. Brittain was a boy when he entered the Commission, but has grown to be quite a young man. On July 1, 1887, he received \$25 a month as a messenger. He has since done more or less clerical work, and his compensation was increased \$10 a month, making it \$35 a month.

Q. Does Brittain receive any more than others who do similar work?—A. No, sir.

The next is George E. Butler. On July 1, 1887, his compensation was \$45 a month, and it was the same on February 1, 1888. The beginning of the fiscal year after Colonel McDonald became Commissioner we removed our offices, which were then situated on both Massachusetts avenue and N street, to the Safe Deposit Building, corner Fifteenth street and New York avenue. There were three janitors and messengers. One got \$60 a month; one got \$45 a month, and one got \$50 a month. The compensation was made uniform, and all were given \$50 a month, it being thought that that was a fair and proper compensation for the duties performed. It was not merely janitor, but messenger service also.

Q. Captain Collins is next?—A. J. W. Collins. On July 1, 1887, he was the commanding officer of the *Grampus*. On February 1, 1888, he had supervision of the *Grampus*, but was detailed here as a special fisheries expert to appear before the International Fisheries Commission, which was then in session. I think Professor Goode increased his compensation to \$2,000 a year.

Q. Professor Goode increased his salary?—A. Yes, sir.

On the re-arrangement of the offices, the salary of the assistant in charge of the division of fisheries was made \$2,400. Mr. Earle, who was then in charge, resigned, and Captain Collins was appointed to the place. In September, I think it was, of 1889, the compensation of that office and also of the office of the assistant in charge of the division of scientific inquiry was raised to \$2,700 per annum.

Q. Were the duties of the offices increased?—A. Well, it was supposed, as I understand it, that the compensation was more commensu-

rate with the duties exacted; not necessarily that the duties were increased.

Q. You spoke of Mr. Earle resigning; was his resignation voluntary?—A. Yes, sir.

Q. Where did he go?—A. He is now connected with the National Museum under Professor Goode.

Q. The next is W. F. Conway?—A. Mr. Conway's compensation was \$540 in July, 1887; the same on February 1, 1888, and in April, 1890, he was not on the rolls. He was discharged after an investigation of certain charges which he brought against the superintendent of the carp-ponds. They were thoroughly inquired into, and Conway was informed that unless he could substantiate them he would be discharged. They were not substantiated, and he was discharged.

Q. He is down here as reduced from \$540 to \$480 on this list?—A. He was not on the rolls April, 1890. That is erroneous.

Q. He was discharged for cause?—A. He was discharged for cause.

H. D. Dean, in charge of the Northville (Mich.) Station. In 1887 his compensation was \$600 a year, and the same February 1, 1888. He was then a watchman and a subordinate employé of the station. His duties were increased by the superintendent of the station, and he has been foreman, and a corresponding increase was given him, to \$900 a year.

Q. Is that what the superintendents of other stations receive?—A. He is simply the foreman, not the superintendent.

Q. The next is F. P. Fennell?—A. The amounts given here are correct. The increase, \$600, is correct, but it was made at different times. At one time his salary was raised to \$900, and by continued efficiency on his part it was again raised, and he was given \$1,200.

Q. What is his position?—A. He is a stenographer and general assistant to the chief clerk.

Q. Was he raised on account of an increase of work?—A. Increase of work and increased competency.

The next is that of my own salary.

Q. That shows an increase of \$200?—A. The amounts therein mentioned are correct. Of course, I consider that that increase is justified.

Q. As a matter of fact, Mr. Gill, have your duties increased; is there more to do?—A. There is more to do, and there are greater disbursements. I am under a bond of \$25,000. My disbursements average in the neighborhood of \$350,000 a year. The amount is not so great, but we have some twenty odd stations; we have three vessels; we have three cars, and at certain seasons of the year we have a large number of temporary employés.

In addition to the regular work of the Commission there have been certain appropriations made for specific constructions; for instance, at Lake Erie, at Neosho, at Leadville, all of which were additional, requiring the preparation of advertisements, the preparation of contracts, as well as the examination of accounts and the disbursement of money.

Q. That increase was made by Commissioner McDonald?—A. Yes, sir; on July 1, 1889.

The next is Ansley Hall. The list says "in the 1889 Blue Book," \$540 in 1887, and \$900 in April, 1890. His compensation April, 1890, is \$900. July 1, 1887, he was not on; February 1, 1888, he was not on. He is an employé of the Fish Commission, first placed on duty May 8, 1889, at \$45 a month.

Q. Was he not in the Blue Book in 1889?—A. Yes, sir; May, 1889, probably in the Blue Book.

Q. Was his salary increased from \$540 to \$900?—A. It has been the custom in making new appointments for work that is not altogether technical in its character to bring in a person at a low salary, with the understanding that if he proves his efficiency and competency there is a chance for promotion.

Q. What are his duties?—A. He is a field agent in the statistical division of fisheries, engaged in the gathering of statistics of fisheries. The question of compensation and increases, etc., is left to the recommendation of the assistant in charge of that division.

Q. And for efficiency and good service was recommended for an increase?—A. So I understand.

Q. Does he receive more than others who occupy similar positions?—A. No, sir; about the same.

The next is W. K. Hancock. When Hancock was first brought on he was a young man living in Wytheville, Va., where labor and living are cheap.

Q. Is there a station there?—A. There was a station there, and there is now. He applied himself, and became quite proficient and efficient, not merely with regard to salmonidæ, but in shad hatching. During this spring he was temporarily transferred from Wytheville to Washington, and has since been ordered to Leadville, Colo., and his compensation was increased. In April, 1890, it was at the rate of \$720 a year.

George A. Jones. The rates mentioned there, \$660 in 1887, \$720 in 1890, are correct, but the increase instead of being \$120 is but \$60, as you see.

The CHAIRMAN. I see.

The WITNESS. That is \$5 a month.

By the CHAIRMAN.

Q. Was his salary increased on account of increased service and increased value?—A. Yes, sir; an increase. He is a laborer, but has acquired some skill as a fish-culturist too.

D. W. Kenly. His compensation on July 1, 1887, was \$720 a year, not \$780. His compensation February 1, 1888, was \$780, and on April 1, 1890, \$960, an increase, apparently, of \$180 a year. Mr. Kenly is a fish-culturist and also a skilled carpenter. It has been found expedient right through the service of the Commission when possible to get men of that kind, so that when one work ceases they could be used in another.

Q. For another purpose?—A. Yes, sir.

C. E. Latimer. His compensation on July 1, 1887, was \$660 a year; on February 1, 1888, prior to Colonel McDonald coming in, it was \$840, and in April, 1890, it was \$1,100.

Q. What is his position?—A. He was a clerk in Mr. Smiley's division, and I think I have got a letter specially recommending him for increase, if I mistake not [consulting paper]. No, this goes back prior to that time, but that increase was made upon Mr. Smiley's recommendation. Mr. Smiley was in charge of the office to which Mr. Latimer was attached.

"C. C. Lewis, relative of McDonald." I do not know whether Mr. Lewis is a relative of Colonel McDonald or not, although I believe he is a connection either of his or his wife. I am not certain.

Q. What are his duties?—A. He is now at Wytheville, Va., having recently returned from Leadville, Colo., and was ordered to Wytheville in connection with the shipment of trout. He is now temporarily attached there.

Q. What is his position now?—A. He has, I believe, become more or less proficient as a fish-culturist, and is an expert messenger in the distribution of fish.

Q. Is his salary the same or more or less than others occupying the same position?—A. He is not occupying the same position. He went on first at about \$45 a month as an apprentice messenger, as it is called, in the distribution of fish. He was then increased to \$60 as assistant messenger. Then, I think, he was made an assistant in the hatchery, but I am not certain, at \$75 a month, and when ordered to Leadville, by reason of the increased expense of living out West, his compensation was raised \$15 a month, 50 cents a day, practically covering a part of the increased cost of subsistence.

Q. But is his salary larger than that of the man who occupies the position which he occupied at Leadville? When he came away from Leadville somebody took his place, I suppose?—A. Hancock took his place. I could tell you in a minute by going to my books. I am not certain.

Q. W. K. Hancock?—A. Yes, sir. This list only gives it up to April, and he has since been ordered there.

Q. I would like to know whether the man who took his place receives more or less than he did?

The witness retired from the room, and having returned said:

A. As stated, Mr. Hancock's salary was \$60 a month. I find that since he has been ordered to Leadville his compensation has been increased \$15, making \$75, which is less than Mr. Lewis was receiving, but it is a proportionate increase on his salary.

Q. Is the salary Mr. Lewis is now receiving at that hatchery, \$1,080, more or less than men occupying the same position at other hatcheries receive?—A. That I can not definitely answer, because those places vary. It depends a good deal upon the skill of the man, and I am not competent to speak as to the skill of these men.

Q. Here is another Lewis, Robert E. Lewis?—A. Robert E. Lewis is an appointee of Mr. McDonald. It is true that in April, 1890, he received \$780, but it was simply while temporarily employed at Fort Washington, Md. He is a clerk here at Washington, and was receiving \$50 a month at his home here. When he was ordered down there, instead of paying his expenses, an increase of \$15 a month was given him, making it \$65 a month against \$50. He is now back in the office at a salary of \$50 a month.

That finishes that list.

The list designated "A" is as follows:

A.—List submitted “showing some of the favorites”, as shown by the records of the Commission.

Name.	1887.	April, 1890.	In- crease.	De- crease.	July 1, 1887.	Feb. 1, 1888.	Apr. 1, 1890.	In- crease from Feb. 1, 1890.	De- crease from Feb. 1, 1890.

* Increase of work.

† Discharged.

‡ In 1889 Blue Book.

§ 1889.

|| Not on.

¶ 1887.

** Relative of McDonald.

The WITNESS. The next is list B, “some of the old trusted employes of the late Prof. S. F. Baird.” Mr. Atkins has already been explained. Those amounts are correct.

John E. Brown, Frank N. Clark, the same.

Q. They were in the previous list?—A. Some of them were and some were not. Mr. Atkins was. Mr. Brown, for instance, we find his salary is the same in 1890 as in 1887.

Q. Does he occupy the same position?—A. Yes, sir.

Q. What position does he occupy?—A. General store-keeper, office of distribution. He is sent out in distribution work in emergencies, and is purchasing agent for the office.

Q. Did he occupy the same position in 1887?—A. Yes, sir.

Q. How about Mr. Clark?—A. He occupies the same position, superintendent of the Michigan stations.

Q. He receives the same compensation and his duties are the same?—A. Yes, sir.

Q. W. A. Dunnington is the next.—A. W. A. Dunnington was not on regularly on July 1, 1887. He was a temporary employe and it was not until after Professor Baird's death that he was brought on as a permanent employe.

Q. Did he not appear in the Blue Book of 1887?—A. I suppose so; I have not looked at it.

Q. Probably he did as a temporary employe; what are his duties?—A. He is in charge of car No. 2. Mr. Moore, who is now superintendent of distribution, was promoted to that position and Mr. Dunnington was assigned to take his place on the car.

Q. At the same salary?—A. At the same salary. The salaries of car captains are uniform.

J. Frank Ellis is next.

Q. How about him?—A. He is a captain of a car.

Z. H. Goldsmith is foreman of the fish-ponds in the monument lot. He has been there for a number of years. His work is laboring, though

he has become very competent as a fish culturist, especially as applied to the ponds. I do not speak from my own knowledge, but simply from what I have heard.

Edward Hayes was stenographer to Professor Baird and is stenographer to the present Commission.

Q. Is the salary the same?—A. Yes, sir.

Q. Eighteen hundred dollars?—A. Yes, sir.

Q. There is nothing to compare that with. He is the only one. You can not compare his salary with any others?—A. No, sir; stenographic work is light one day and heavy the other.

Q. Rudolph Hessel?—A. His compensation is the same as it was prior to Mr. McDonald becoming Commissioner.

Q. It is down here at \$1,800 in 1887.—A. That is correct.

Q. What are his duties?—A. He is superintendent of the fish-ponds.

Q. Where?—A. In the monument lot. He is a German, and made the first effort to bring the German carp to this country, and I believe his first connection with the Commission was the transporting of some special salmon to the United States way back in the early part of Professor Baird's administration.

Q. Is his compensation the same as it was?—A. No, sir. He first received \$1,500.

Q. Miss Annie C. Lincoln?—A. She is a clerk engaged in posting up purchases of material, etc., keeping a record of them, etc.

Q. Her compensation is the same?—A. Her compensation is the same.

Q. Has there been any increase in her duties?—A. Comparatively no increase in duties. Perhaps there may have been a slight increase in work.

Q. Not excessively?—A. No, not an excessive increase.

Q. George H. Moore?—A. He occupied the position of car captain on July 1, 1887. On February 27, I think it was, he was promoted to the position of superintendent of distribution. Mr. Dunnington relieved him as car captain, and on March 1, 1888, his compensation was increased \$25 a month to \$1,500 a year. It is now \$1,800 a year, having been increased July 1, 1889.

Q. Is his present position the same as held by Mr. McDonald before he was made Commissioner?—A. It is not. Colonel McDonald was not merely the superintendent of distribution. He was in general charge of the work of fish culture, which included not only the propagation of fish, the supervision of work of a large number of stations of the Commission, but also that of the distribution of the food fishes.

Q. And Mr. Moore is simply the superintendent of distribution?—A. Yes, sir.

Q. While Mr. McDonald's salary was \$2,400, Mr. Moore's is \$1,800?—A. One thousand eight hundred dollars, but he performs but part of the work that Colonel McDonald performed.

Mr. W. de C. Ravenell is and has been for a number of years superintendent of the battery station on the Susquehanna River. That station is not occupied, or is not conducted rather, the whole year, the active operations being confined to the shad season.

Q. I noticed that his salary is \$1,500, while Mr. Clark at Northville receives \$2,200.—A. There is a difference in stations. You will find that right straight through. In some places labor is more expensive, living is more expensive, and the Commissioner has tried as a rule to adjust the compensation of superintendents of stations on an equitable

basis, not merely to take into consideration the work done at the stations—

Q. But the cost of living?—A. The cost of living at these places.

Q. Washington Robinson?—A. His name was on the previous list. He is a janitor.

Q. His salary seems to be reduced?—A. As I stated, when the offices were brought down to Fifteenth street and New York avenue, to the Safe Deposit building, the salaries of messengers and janitors were put on a uniform basis.

Q. Were the duties less after that adjustment than before?—A. They were about the same.

Q. They were all put upon one basis?—A. Yes, sir.

Q. Occupying the same position and receiving the same pay?—A. Yes, sir.

Q. Miss Julia Rockwell?—A. She is a record clerk, and her compensation has been continued right straight along about the same. I do not know whether her duties have been increased specifically or not.

Q. As the general work has increased, has the work increased in some departments?—A. In some departments.

Q. So the work in some particular department would be more apt to remain as it was than it would in other departments?—A. In one sense I should say it might, because a large part of the correspondence of the different branches of work is, I believe, kept in the different offices and looked after and does not enter the general files, which in some cases, or nearly all cases, was brought to the general files before. I speak that generally from my belief and not from actual knowledge.

Q. How about J. Paul Wilson?—A. J. Paul Wilson was years ago a stenographer, one of the stenographers to the Commissioner, and general clerk, and in 1884 or 1885, I think it was, was made property clerk. He has general charge of keeping the records in regard to property, where it is, what it has cost, etc.

Q. His compensation is the same?—A. It is the same. There has been no practical increase of duties. That finishes that list.

The list designated as "B" is as follows:

B.—List submitted. "Some of the old trusted employes of the late Prof. S. F. Baird," as shown by the records of the Commission.

Name.	1887.	1889.	1890.	Decrease.	July 1, 1887.	July 1, 1889.	June 1, 1890.

Miss Julia Rockwell.....	840	840	840		840	840	840
J. Paul Wilson.....	2,000	2,000	2,000		2,000	2,000	2,000

* Not on till September.

† Same position as McDonald held at \$2,400, but Mr. Moore, with more work, only gets \$1,800.

The WITNESS. I will take the next list, "C." E. T. Locke. It is E. F. Locke. Mr. Locke was not on regularly in July, 1887. I think he had been previously employed temporarily.

Q. He is not down here?—A. In 1889 he was a general assistant and care-taker of station at Ten Pound Island, Gloucester, Mass., and incidentally gathered statistics of fisheries there. He was care-taker of the station. During the active operations of cod-hatching at that station his compensation was increased \$20 a month, making \$80 a month, and in April, 1890, he received that compensation. At this date the work of cod-hatching at Gloucester having ceased, he has been put back to his old compensation of \$60 a month.

Q. Then it appears correctly that he received \$960, but now he is back at \$720?—A. Now he is back at \$720.

Q. William Maynard?—A. William Maynard received in 1887, \$540. In 1889, \$720.

Q. In 1887, \$540?—A. Yes, sir, and in 1889, \$720.

Q. Was his position changed?—A. He became more expert. He was made night watchman. He had shown that in case of an emergency with the aquaria or with the fish-hatching operations he could provide for it temporarily until proper assistance came. I, however, make the increase but \$180 a year instead of \$280 a year; \$540 and \$280 would make \$820, and not \$710.

Q. An increase of \$180?—A. Yes, sir.

Q. Was the salary increased on account of long service and proficiency?—A. Yes, sir.

Q. Andrew McCormick?—A. Andrew McCormick was an employé of the Duluth (Minnesota) Station, which did not enter into active operations until the fall of 1888, I think it was. He was first put on as a general assistant in the hatchery at \$50 a month, and later on, some months ago, comparatively, I think a resignation took place, and his duties were increased and his compensation was increased.

Q. To \$900?—A. Yes, sir.

Q. Do you know whether he is a relative of Mr. McDonald?—A. I think he is no relation in any way; he was a man picked up out there.

Q. Is there another McCormick in the service?—A. Yes, sir; in the next room.

Q. Francis McCormick; what about him?—A. Francis McCormick, this paper states, is a nephew of Mrs. McDonald. That I do not know. I believe he is some connection of Mr. McDonald or of his wife.

By Senator SQUIRE:

Q. Would you be likely to know in regard to these relatives of his or not? Sometimes charges are made in regard to favoritism by reason of some connection or especially friendly relation. Would you be apt to know whether they are or not members of the family, or relatives, or special friends?—A. I hardly would. I know he is some connection. What it is I do not know.

By the CHAIRMAN:

Q. When was he appointed?—A. I think it was about July, 1888.

Q. What is his compensation?—A. \$50 a month.

Q. What are his duties?—A. He is general clerk in the division of scientific inquiry.

Q. Is the salary paid him the same as that paid other clerks in the division?—A. It is less.

Q. Is that on account of being a new man?—A. He is a young man; he has not had time to work up yet.

Q. Are there any other clerks there who receive less than \$50 a month in that office?—A. There are none.

Q. George H. H. Moore?—A. Mr. Moore has been explained.

Q. He was in the previous list?—A. Yes, sir.

Q. How about Miss M. L. Nicholson?—A. She is a clerk in my office. She is an expert type-writer and an excellent penman, an educated woman and a hard worker. She is no relation of mine, and I have known her but a little while. My wife has known her for a very long while.

Q. In 1889 her salary was \$900?—A. Yes, sir.

Q. I see it is increased.—A. Going back to February, 1888, her salary was \$600. She was brought in at \$50 a month, and by application she demonstrated by work that she was able to do good work, and her salary has been increased. Her duties have necessarily been increased by reason of the increase of work.

Q. It was increased from \$600?—A. From \$75 a month to \$90 a month.

Q. When was that increase made?—A. That increase was made about the first of January, 1890; that is my recollection.

Q. She is no relative of yours?—A. No, sir.

Q. Of your wife or of Mr. McDonald?—A. No, sir.

Q. How about J. J. O'Connor?—A. J. J. O'Connor has been in the Commission quite a number of years. In July, 1887, his compensation was \$1,380.

Q. What is his position?—A. He is chief clerk. On February 1, 1888, his compensation was \$1,800.

Q. In 1887 his pay was \$1,360?—A. One thousand three hundred and eighty dollars.

By Senator SQUIRE:

Q. What is it now?—A. Two thousand four hundred dollars. On February 1, 1888, before Mr. McDonald became Commissioner, Commissioner Goode increased his salary to \$1,800 a year, and he was, what you might say, chief clerk of the division of fish-culture. He had a great deal of correspondence to do, and he had the examination of a great many papers, and the examination of accounts sent in by the different stations.

By the CHAIRMAN:

Q. Then his salary was increased to \$2,200?—A. It was increased to \$2,200 July 1, 1889, and later on it was increased to \$2,400.

By Senator SQUIRE:

Q. When was it increased to \$2,400?—A. September, 1889, or August, 1889, I think.

By the CHAIRMAN:

Q. Where the salaries have been increased, have the duties been increased?—A. The position has been increased in this case. He has been given a higher position.

By Senator SQUIRE:

Q. What did he do later, when he got \$2,400, that he did not do when he got \$2,200?—A. I do not know that he does any thing different, only more of it. The Commission has been growing steadily and the correspondence has necessarily been very much heavier.

By the CHAIRMAN:

Q. The next name is that of Mr. Page?—A. W. F. Page was receiving \$1,200 a year.

Q. In 1887?—A. In 1887. He is an expert fish-culturist. Congress made an appropriation for the construction of a fish hatchery at Neosho,

Mo. It was necessary to appoint a man as superintendent of that station, and Mr. Page was appointed. His compensation was increased by reason of increased responsibilities, the increase of position.

Q. He is now in charge of that station?—A. He is now at Neosho, in charge of the station.

Q. The next is Mr. Parker?—A. H. P. Parker in 1887 was a clerk under Mr. Smiley. On February 1, 1888, he was still a clerk under Mr. Smiley, at a compensation of \$55 a month instead of \$30 a month, which he received in 1887. The increase was made upon the recommendation of Mr. Smiley—

Q. Has he been still further increased?—A. And if I mistake not the increase to \$70 a month was made upon the recommendation of Mr. Smiley. The records of the Commission probably would show that. He is now connected with the chief clerk's office.

Q. He is in a different position now?—A. He has more work. It is practically the same position; the duties are practically the same.

Q. But the work has increased?—A. Yes, sir; and there is greater efficiency in the work.

Q. P. C. Pearce?—A. That is T. C. Pearce. He first came on the Commission in a temporary position. He now occupies—no, he does not; he occupies a more permanent position, as a temporary apprentice messenger in the distribution service, at \$45 a month.

Q. That is \$540 a year?—A. Yes, sir. Shortly after Colonel McDonald became Commissioner the car service of the Commission was put on a permanent basis. The cars, during a large part of the year prior to his taking charge, were laid up. Commencing with 1888, the work of the collection of indigenous fishes of the Mississippi Valley was entered upon. The cars were sent out there, and the fish were collected from the different pools that were left after the overflows.

Q. That was explained to us by Mr. Gay yesterday, was it not?—A. And Mr. Pearce was put on first, I think, at \$45, and afterwards promoted, as a vacancy occurred, to \$60 a month. He has become very efficient, I should judge, from the fact that, during this spring in the shad-distribution work, the Commissioner found it desirable to ask from the Pennsylvania Railroad Company the use of a baggage-car, and Mr. Pearce was placed in charge of it, made an independent messenger in charge of a car?

Q. And his pay was increased on that account?—A. On that account, efficiency; yes, sir.

Q. How about Charles Perry?—A. Charles Perry was first employed as a seaman on the schooner *Grampus*, the uniform compensation of which position is \$45 a month. He resigned, to the very best of my recollection, from that place, and later on was temporarily employed as a spawn-taker in the collection of eggs of cod-fish at Gloucester, Mass. He is not now on the rolls of the Commission, that work having ceased.

Q. When he did that work his pay was increased?—A. It was a different position. He was a spawn-taker at \$60 a month. When he was first employed he was a seaman at \$45 a month.

Q. S. L. R. Pritchard, how about him?—A. He is a clerk in the division of fisheries.

Q. A clerk?—A. In the division of fisheries, in the preparation of statistics. He was first brought on at \$50 a month. As he became more proficient to do the work, more competent, his salary was increased.

Q. It is now \$780?—A. It is \$65 a month.

Q. R. R. Rathbun?—A. Mr. Rathbun's compensation in 1887 was \$2,000.

Q. What is his position?—A. He is the assistant in charge of the division of scientific inquiry.

By Senator SQUIRE:

Q. Assistant?—A. Assistant in charge. In 1887 his compensation was \$2,000. On February 1 his compensation was \$2,200, the increase from \$2,000 to \$2,200 having been made by Commissioner Goode.

Q. In 1887?—A. Yes, sir; when Professor Goode was Commissioner.

Q. It had been raised to \$2,200 before Mr. McDonald became Commissioner?—A. Yes, sir. On July 1, 1889, the compensation was \$2,400, and it is now, and has been since September 1, 1889, \$2,700, the compensation of the two assistants in charge of the two principal divisions of work of the Commission having been made uniform, Captain Collins and Mr. Rathbun.

By the CHAIRMAN:

Q. Mr. Robinson seems to be the next man.—A. E. M. Robinson is a fish-culturist. In 1887 his compensation was \$80 a month. In July, 1889, it was \$1,200 a year. He was from time to time placed in charge of special work in fish-culture, in charge of the hatchery, instead of being merely an assistant in the hatchery. It was first increased to \$1,200. In the fall of 1889 he was ordered as superintendent of the Leadville (Colo.) Station. His duties were to arrange for the commencement of the active work of propagation, and also to have supervision in regard to the construction going on there. We had a special man there, who was afterwards relieved very near the completion of the work, and Mr. Robinson took the matter up after that.

Q. He is in charge of that station?—A. He is now superintendent of that station.

Q. His compensation is \$1,500?—A. Yes, sir.

Q. Is that the same others receive at the other stations?—A. It is less, when you take into consideration that Leadville is a Western station. Living in Colorado I believe is a little high. I should say that the compensation was not extraordinary, and perhaps might be somewhat under the ordinary.

Q. It is less than Mr. Clark receives?—A. It is less than Mr. Clark's compensation, but Mr. Clark is in charge of two stations.

Q. Another Mr. Robinson?—A. Wash. Robinson. We have already passed upon that. He is a janitor. I have spoken of him.

Q. E. K. Noyes?—A. That is entered here as E. J. Royers. The name is E. I. Rogers.

Q. In 1887 he seemed to be receiving \$720?—A. Mr. Rogers first came on the Commission some years ago, in the distribution service as an apprentice messenger in the car service. Afterwards he was transferred to the office as a copying draughtsman.

By Senator SQUIRE:

Q. What pay does he get now?—A. Nine hundred dollars.

Senator SQUIRE. He is the one who complained he did not get enough?

The CHAIRMAN. Yes, sir.

By Senator SQUIRE:

Q. Is there any reason why he is not paid more? There seems to be a great deal of liberality in regard to the increasing of the pay of these employés. Do you know of any favoritism or lack of favor to account for his not receiving more?

The CHAIRMAN. He is down here in the list of favorites whose pay has been increased. It has been increased from \$720 to \$900.

By Senator SQUIRE:

Q. He stated that he performed work that was equal to that of men who received much more and he felt that he ought to receive more.—A. I am not capable of passing upon that.

By the CHAIRMAN:

Q. When was this increase from \$720 to \$900 made?—A. In 1888, in June, I think it was. He was temporarily assigned as inspector of the work being done under contract at the carp ponds in the Monument lot, and his compensation was increased from \$60 a month to \$75 a month at that time. On the cessation of that work he was put back at the old figure. Afterwards, I think it was a few months afterwards, his compensation was regularly increased to \$900 per annum.

Q. How about Tom P. Sauerhoff?—A. That should be William P. Sauerhoff. It is probably a type-writer mistake. Mr. Sauerhoff is like some of the other men; he is a carpenter and an expert mechanic, in addition to being a fish culturist.

Q. He is down here as receiving \$900 in 1887, and \$960 now.—A. His compensation varied from \$75 a month to \$80 a month, according to the place he was ordered to. If he was stationed at a place where the Commission had a mess, had quarters, his compensation was \$75 a month. If he was ordered here to Washington it was made \$80 a month.

Q. Five dollars a month more?—A. Yes, sir.

Q. How about Mr. Charles W. Scudder?—A. Mr. Charles W. Scudder received in 1887, \$1,080; July 1, 1889, \$1,200; and he is now receiving \$1,280.

Q. What position does he occupy?—A. He was the clerk, principal clerk to Mr. Smiley for a time, and afterwards, about a year ago, he was transferred to the office of the chief clerk, and put practically in charge of the recording of correspondence.

Q. His salary was increased \$120?—A. Yes, sir.

Q. There was a change of duties?—A. Practically the same duties, but he became competent. June 25, 1885, Mr. Smiley addressed a letter to Professor Baird in regard to Mr. Scudder:

JUNE 25, 1885.

With the close of the fiscal year I feel called upon to report the general efficiency of my assistants, and to recommend them to such advancement, financially, as you may find in harmony with your plans for 1885-'86. Mr. Scudder has had added responsibility since January first, in the matter of mailing, and you have had opportunity of knowing his value in this respect. I think he should rank at least as a first-class clerk at \$100, if you have the means to place him at that rate.

By Senator SQUIRE:

Q. That shows Mr. Smiley approved of the raise.—A. That is signed Charles W. Smiley, June 25, 1885, but the increase did not take place until after Colonel McDonald came in, which, I think, took place July 1, 1888, which you see was three years afterwards—

Q. Was that increase made?—A. And during all that time Mr. Scudder was under Mr. Smiley.

Q. Do you know whether Commissioner McDonald's attention was called to that recommendation of Mr. Smiley?—A. I can not tell you, sir.

By the CHAIRMAN:

Q. Would it have been apt to have been?

By Senator SQUIRE:

Q. It is on file in the office; you have taken it from the files?—A. Yes, sir.

Senator SQUIRE. It necessarily would have been called to his attention.

The CHAIRMAN. Mr. Scudder would have been very apt to have called his attention to that recommendation.

By the CHAIRMAN:

Q. How about George A. Seagle?—A. George A. Seagle was the superintendent at the Wytheville (Virginia) Station.

Q. When?—A. In 1887, also in 1889 and at the present time. His compensation was \$900 a year in 1887. On the coming in of Colonel McDonald the station at Wytheville was enlarged and the work increased, a larger number of fish were kept there; they had to be fed, and the question of feeding the fish up to a certain size before they were distribute l——

Q. Did that necessitate an increase of work?—A. And the superintendent was given a compensation of \$1,200, which is the least compensation paid to a superintendent.

Q. Did you state what station he was in charge of?—A. Wytheville, Va.

Q. The next man seems to be Hugh M. Smith?—A. Mr. Smith is the principal statistical clerk in the division of fisheries. He was first employed when Mr. Earle was in charge of statistics, at \$50 a month. He was first brought in, and afterwards——

Q. In 1887?—A. Yes, sir, in 1887. On February 1, 1888, his compensation was \$960, and on July 1, 1889, his compensation was \$1 200, and later on, I think this year, it was \$1,380, an increase of \$15 a month. Mr. Smith, I understand, is extremely competent and a careful statistician.

Q. That shows from 1887 to 1890 an increase of \$780. Is that an average increase?—A. But the increase from February 1, 1888, is not so great.

Q. No; but I speak by this table. In 1887 it was \$600. That was when he first entered the commission?—A. Yes, sir.

Q. Now, he is in charge of the station and receives \$1,380?—A. Yes, sir, \$1,380.

Q. How about Charles H. Stevenson?—A. Charles H. Stevenson is a clerk and field agent in the collection and preparation of statistics. He was, I believe, a school teacher in some little Chesapeake county (Maryland) school. He was interested in the matter of fisheries. He was run across by one of our agents out, and he was given an opportunity to take up this work. He wanted to leave school-teaching, I believe, and accepted the compensation of \$30 a month in order to be allowed to do that work.

Q. Thirty dollars a month?—A. Yes, sir.

By Senator SQUIRE:

Q. What year was that?—A. The year is not given. In 1889 and later on his compensation was increased to \$50 a month. It was shown that he had done good work, and still further on he was not only sent out to collect statistics, but he was brought here to the office and in order to collate the same, which was increased duty and required some skill. Under those circumstances his compensation was increased.

By the CHAIRMAN:

Q. Increased to \$900?—A. Yes, sir; \$75 a month.

Q. Is he still employed by the commission?—A. Yes, sir.

Q. Albert J. Stoerzer?—A. Albert J. Stoerzer has been employed a number of years. First at \$20 a month. In July, 1889, his compensation was increased to \$30 a month, and now it is \$50 a month.

Q. What position does he occupy?—A. He occupies a semi-clerical and messenger position in the library. He is of German parentage, rather his parents were German. He has rendered himself quite competent in the translation of German papers and letters and I believe is a very efficient young man.

Q. How about Livingston Stone, of New Hampshire?—A. Livingston Stone has been connected with the commission for a great many years; in fact, since the inception of the fish-cultural work. He was first assigned as a so-called deputy for the Pacific coast at a salary for a part of the year of \$250 a month. He was not paid the whole year round.

Q. I see it is put on this list that his pay in 1887 was \$500?—A. I put that on. In 1887, and for some time prior to the beginning of that year, he had charge of the work at Baird's Station, California, the work of which had been very much reduced; in fact, almost suspended for a time. He was placed in charge, but not required to be there. But he exercised supervision over the employes out there. Nobody here had ever been there, and did not know what was necessary.

Q. He had supervision of other stations also?—A. He was East at his home, but exercised supervision there at a nominal compensation of \$500 a year.

Q. In 1889 he is down at \$2,000?—A. Yes, sir. In the fall of 1887 steps were taken towards the selection and procurement of a station on the Columbia River, Oregon, or one of its tributaries, which had been authorized by specific act of Congress. Mr. Stone had been in that region, on fish cultural work, a number of years before, and by reason of his knowledge of the locality was sent out to select a site for the station. This was in the fall of 1887 (prior to Colonel McDonald becoming Commissioner), at which time he was placed on the Commission's roll at a regular salary.

Q. At a salary of \$2,000 a year?—A. Yes, sir.

Q. Why was he dropped?—A. He has been ordered East, and temporarily furloughed without pay. I do not know that it is the Commissioner's intention to permanently discontinue his services.

Q. Why was that?—A. He wanted to come East, and the work had let up. There was a foreman put in charge, and Mr. Stone was detached from that station in order to come East.

Q. Why do you say he was dropped?—A. He wanted to come East, I understand, and the station was put in charge of an acting superintendent. Why he was dropped I do not know. I did not hear of any special reason. They found they could get along without him for the time.

Q. R. O. Sweeny, sr.?—A. Mr. Sweeny was appointed superintendent

of the Duluth Station, a new station which was ordered by Congress, and which was not ready for occupation until the fall of 1888. Dr. Sweeny had been commissioner of fisheries for the State of Minnesota a great many years, and was an expert fish-culturist, and also well acquainted, I believe, with fish matters generally. In looking around for a superintendent he was selected. His compensation was first fixed at \$1,500 a year. It was afterwards increased to \$1,800 a year, it being deemed by the Commissioner, I believe, that that was a more equitable compensation.

Q. Is he still in the service?—A. He is still in the service.

Q. R. O. Sweeny, jr.?—A. He is a son of R. O. Sweeny, sr. He was employed as a machinist on the recommendation of Dr. Sweeny, his father. He has been employed for a part of a year. He is not now on the Commission rolls; he resigned.

Q. He was employed at the Duluth Station?—A. Yes, sir.

Q. At \$840 a year?—A. Yes, sir; a year. He resigned I believe to take some position on some vessel on the lakes there. As to that I simply speak from what I understand, not from my knowledge.

Q. How about Robert Timbers?—A. Robert Timbers is a colored man. He was first employed as a general laborer at \$15 a month. He has been gradually increased until his compensation was made \$60 a month. He is a hard-working man.

Q. What are his duties?—A. In connection with the aquaria, principally—

Q. At this station?—A. But he has been trained as a general assistant in the matter of fish-culture.

Q. Is he competent to treat fish, to take care of them?—A. I believe he has learned to take care of fish when they become sick. I do not suppose he would be competent to be put in general charge. But for emergencies I understand he has become quite competent, and is a faithful man.

Q. He was increased. In 1887 he received \$540, and in 1889 he received \$720?—A. Yes, sir.

Q. Who increased his compensation to \$720?—A. The present Commissioner. On July 1, 1887, he was temporarily employed at Wood's Holl, having been ordered there. Wood's Holl is a very hard place to get servants. He was ordered down there by Professor Baird as the janitor of the building, and in order to cover the cost of his subsistence, \$5 a week, his compensation was increased for the time being.

Q. You say he was sent there by Professor Baird?—A. Yes, sir.

Q. I understand you to say his compensation was increased by Colonel McDonald?—A. That was done in 1888.

Q. Between these dates?—A. Yes, sir. From July 1, 1887, Robert Timbers's compensation was temporarily increased \$22.50 a month, during the time of his stay at Wood's Holl, Mass., where he had been ordered for a short period by Professor Baird.

The list, designated as "C," is as follows:

C.—List submitted.

Name.	1887.	1889.	April, 1890.	Increase.	Decrease.

*Dropped. †Not on. ‡On leave, without pay. § While temporarily employed at Wood's Holl, Mass.

By the CHAIRMAN:

Q. George H. Talbot?—A. Talbert belongs to the same class of men as Sauerhoff and Kenly.

Q. What are his duties?—A. He is a carpenter and fish culturist, and those three men's salaries are about the same. They varied a little.

Q. I see he was increased from 1887 to 1889 \$60.—A. That is explained as I said before, \$5 a month. Tulian is an employé at the Alpena (Michigan) Station. In 1887 his compensation was \$45 a month

apparently, from this, and on July 1, 1887, he was not on the rolls of the Commission. He may have come on afterwards. He was a temporary employé as the work required his services. Nor on July 1, 1889, was he employed.

Q. In 1889 it appears his salary was increased from \$540 to \$600?—A. In October, 1889, he was brought on in the work in Michigan at a salary of \$50 a month; the compensation was fixed by the superintendent of the station and approved by the Commissioner. He is one of those men while practically a permanent man, should the work cease he would be dropped. There are a large number of persons in the Commission of that kind. They are brought on and dropped off from time to time.

Q. S. G. Worth?—A. Wilcox is next. Mr. Wilcox on July 1 drew a compensation of \$50 a month. He was then in charge of the Boston Fish Bureau, I believe, at Gloucester, Mass., engaged in the collection of statistics and reporting the same to fish-dealers of Boston, and his services were secured to gather the statistics of that neighborhood and report them, and he has been connected either directly or indirectly with the Commission for a large number of years.

Q. Is he connected with the Commission now?—A. He is now connected with the Commission, and his salary is \$115 a month.

Q. What are his duties?—A. At present he is on leave of absence by reason of sickness, without pay.

Q. What are his duties?—A. He is field agent in the collection of statistics and also in the preparation and collation of the same in the office. He is out in the field and back again.

Q. Preparing them for publication?—A. Yes, sir. S. G. Worth, on July 1, 1887, was employed at Weldon, N. C., in regard to the location of the fish-hatching station at that point. He was paid \$60 a month and his expenses. Later on, on July 1, 1889, his compensation was \$1,500 a year, and he was given a permanent position as superintendent of the central station.

Q. That is this station here?—A. Yes, sir. In addition to the duties of this station here, he is also the superintendent of the station at Fort Washington, Md., in the shad-hatching season, and looks out for things there. I should say that comparing the salaries paid to the other superintendents of stations, for example, \$1,200 at Wytheville, where living is cheap; \$1,500 at Neosho; \$1,500 at Leadville; \$1,800 at Baird, Cal.; \$1,800 at Duluth, Minn., that the compensation of \$1,800 here in Washington, and especially as there are two stations to look out for, and this is the general-purchasing station for outside stations, that the compensation of \$1,800 a year is but a fair compensation on that basis.

Q. During the shad season does he take charge at Fort Washington?—A. He takes charge there.

Q. Has he any additional compensation for that?—A. No, sir.

By Senator SQUIRE:

Q. I believe in the beginning of your examination you testified to what your duties were?—A. I stated I was the disbursing agent of the Commission and the general auditing clerk of the Commission.

Q. I hope you will not feel I am pressing you at all, but how does your salary compare with that of men employed in other Departments of the Government under similar circumstances?—A. I am a bonded officer.

Q. For instance, at the Interior Department and the Land Department of the Government, or any other Department, generally such as you know of?—A. I am a bonded officer, under a bond of \$25,000. My

disbursements aggregate perhaps \$350,000 a year, disbursed in small amounts, and covering expenditures of some twenty odd stations, three vessels, three cars and at certain seasons of the year a large number of temporary employés. I am not merely the disbursing officer, but the accounts all have to be stated or examined by my office, the majority of them are stated, which requires a great deal of work, and it can be readily seen that while \$300,000 may be disbursed in a few payments, and with but a comparatively small amount of work connected with the same, yet if you multiply the number of purchases the work is necessarily correspondingly increased.

Q. It has been claimed that there are others in other departments of the Government who disburse millions of money and do not receive anything like such compensation?—A. That may be very true, sir, but it must be borne in mind that the other disbursing clerks have nothing to do with the preparation of their accounts. The accounts are all prepared outside and are brought to them certified and approved, and their duties consist in drawing up a check and paying the same, or forwarding the same, perhaps, and keeping a record of their individual payments.

Q. How many assistants do you have?—A. I have three assistants and sometimes in stress I have a clerk temporarily.

Q. What pay do the assistants have?—A. They get \$1,500, \$1,080, and \$600.

Q. These names that we have been asking questions about are those, I believe, exclusively which have been submitted by outside parties who are interested to have this matter investigated. Have you a list of all the employés that you can furnish the committee?

The WITNESS. At the present time?

Senator SQUIRE. Yes, sir.

A. The Commissioner has prepared a list.

Q. Does that list show the employés from the beginning of the Fish Commission, with the wages of each one each year?

The WITNESS. Do you mean the permanent employés, or all employés?

Senator SQUIRE. We have been told there were 211. Here are about sixty odd. Now of course that would be a little over a third or less than a third. This is some work, but this is all work for us, and if you will prepare and submit to the committee a schedule such as could go into the printed record of the testimony, showing the regular employés from the beginning of the Commission, it would be so plain that it would speak for itself better than anything that we could get.

The WITNESS. That is a very long piece of work.

Senator SQUIRE. That goes back to what year?

The WITNESS. Back to 1871, and there are a great many employés.

Senator SQUIRE. In the beginning there were but few?

The WITNESS. Few permanent employés. There were many temporary employés brought in, and it would be a very hard thing to take and draw a line there.

Senator SQUIRE. How far back could you go?

The WITNESS. I can go back to the beginning.

Senator SQUIRE. At what time did the business get on to a settled basis so that it was relieved from these personal questions, this personal connection of Professor Baird, and amateurs, and became a bureau of the Government?

The WITNESS. Well, I should say about the commencement of the fiscal year of 1876 and 1877.

Senator SQUIRE. From what year could you readily make out a statement showing the names of employés?

The WITNESS. I can go back to the beginning, if you want it. It is an enormous piece of work, and unfortunately at this time I am badly rusted. It is the end of the fiscal year, and I have my regular work to attend to, and it means going over a great many records.

Senator SQUIRE. We have here, commencing with 1887, four years, you might say, and if we could have a list showing the growth of the work of the Commission and the growth of the expenses connected therewith, as far as relates to these employés, it seems to me when we come to present them to the full committee, as we are bound to do, with this work they will have before them just what they would naturally ask for. If it is impractical to go back to the very beginning, with the time you have we should have some such statement.

The WITNESS. I have not the time at present unless I drop everything else, and that would throw other work behind and I can not well go ahead at this. This is a bad position now; this is the end of the fiscal year and I have to look out carefully to see that our appropriations are not exceeded in any way, and the work has got to be kept up.

By Senator SQUIRE:

Q. Was there a Mrs. Smith in your office?—A. Yes, sir; she is my sister-in-law.

Q. She received a salary of \$800?—A. She received a salary of \$780, I think it was.

Q. When did she leave your office?—A. She left last October.

Q. Who succeeded her?—A. My sister, Miss Caroline E. Gill.

Q. Is she still in the employ?—A. Yes, sir; she is still here.

Q. She received a salary of how much?—A. \$600 a year.

Q. Was she appointed by Colonel McDonald at your request?—A. At my request, sir.

Q. Do you know where Miss A. N. Smith was born?—A. In Louisiana.

Q. Do you know how long she lived in that State?—A. She lived there till driven out by the war when a young child.

Q. Where has she since resided?—A. She has since resided a part of the time in Pennsylvania, and in Washington the best part of her life. Senator Gibson was her friend at the time, and endeavored to get her into one of the other Departments.

Q. He requested her appointment here?—A. No, sir; not here. It was after she failed to get into the other Departments here that I asked Professor Baird to appoint her at \$45 a month.

Q. She was appointed by the professor?—A. She was appointed by the professor; yes, sir.

Q. Was Miss Gill appointed by Professor Baird?—A. No, sir; as I stated before, by Colonel McDonald, at my request.

Q. Do you know the amount of the salaries of the employés of your office?—A. It has been stated that the expense of my office, of the disbursing office, was about \$6,000 a year. That is approximately correct, but it includes the salaries and includes any special equipment for the office outside of stationery.

Q. How much do the salaries amount to?—A. The salaries amount now to about \$465 a month.

Q. How much a year?—A. That would be \$5,680; and occasionally I have extra help, but that is temporarily.

Q. How much would that amount to additionally?—A. That all included would bring the expenses of the office up to about \$6,000 a year.

Q. Are the accounts, the various accounts, the pay accounts and accounts for purchase of material and all that, audited in your office?—

A. Yes, sir.

Q. You act as auditor and disbursing clerk?—A. Yes, sir.

By the CHAIRMAN:

Q. Do you know anything about the purchase of the yacht *Wavie*?—

A. I do, sir.

Q. Was her purchase advertised for?—A. No, sir, if the committee will excuse me I will get the vouchers. I have some papers there that will show, perhaps. She was not advertised for in the newspapers. The vessel was needed badly, I understood, and to take and draw plans for a specific kind of vessel and then advertise for bids to construct that vessel would have taken a long time, and accordingly Mr. Bayley, who is the engineer of the Commission, was directed by the Commissioner to make inquiries to see for what he could get a suitable vessel. He was sent on to New York and visited quite a large number of ship brokers, I believe, and inspected a large number of vessels, and selected this boat *Wavie* as being the best that he could obtain within the sum limited by the Commissioner.

Q. What was that sum?—A. Four thousand dollars.

Q. And she was purchased?—A. She was purchased for the sum of \$3,400.

Q. Purchased at a private sale?—A. Yes, sir.

Q. Do you know how much was expended for fitting her up for the use of the Commission?—A. There was, I should say, probably—I do not know the exact figures, but there were several hundred dollars expended, which was necessitated by the change of work.

Q. As much as \$500?—A. Less than \$500, I think. I doubt if it was more than two or three hundred dollars.

Q. Is there authority in the law governing such matters for the purchase of a boat at private sale?—A. The law requires, when the exigencies require the immediate purchase of articles, that those articles may be procured in open market, and according to methods generally adopted by business men—that is, due care shall be taken. I suppose by that that the advertisement in papers is waived, but it does not mean that one shall simply go into a place and buy anything they see, but to exercise the same care that they would exercise were they purchasing it for themselves.

Q. Were there any advertisements inserted in any papers that the Commissioner wanted to purchase such a boat?—A. No, sir. New York City is a great mart for steam crafts of all kinds. People build their boats and use them perhaps a little while, then they get tired of them or find they cost too much, and are willing to dispose of them, and in that way one is often able to get an extremely valuable boat for a small amount of money.

Q. The Commission has three vessels?—A. The *Albatross*, the *Fish Hawk*, and the *Grampus*, which is a schooner, and a number of launches, but only three large vessels.

Q. You do not know how many launches?—A. No, sir; I do not know.

Q. Approximately?—A. Well, I should say we had five or six launches.

Q. Have the launches averaged in cost about the same that this one did, or more or less?—A. Well, I should say that they averaged more, for the class of vessels. One launch we paid \$4,000 for, and then there are several launches on the vessels that cost different sums of money.

Q. Do you know whether Mr. Bayley calculated that he got a good bargain on this vessel?—A. From what he told me I should think it was a good bargain. He told me the vessel was a cheap one and a good one, and undoubtedly that the price paid was a much less price than the Commission could have contracted for a launch of similar construction.

Q. Was there any hurry for purchasing her?—A. Yes, sir; they wanted to use it in the shad work. They are using her on Long Island Sound now in special investigation.

Q. How have the other ones been purchased; in the same way?—A. In the same way; yes, sir. A Herreshoff launch of course could be bought only from the Herreshoff Company.

Q. Have you the vouchers connected with this launch?—A. Yes, sir.

Q. If you can put your hands on them you may get them.

The witness procured the vouchers.

Q. Do you find them?—A. Yes, sir.

Q. Have you the bill of sale of the craft?—A. Yes, sir. There is the receipt for the actual check paid. (Exhibiting receipt to chairman.)

Q. Have you the bill of sale of the *Wavie*?—A. Yes, sir. The paper is executed by E. S. T. Kennedy, of the city and State of New York, the consideration being \$3,400, and it is duly acknowledged under date of April 12, 1890, before Joe W. Swaine, notary public for Kings County, New York.

Q. Have you any voucher for the expense of Mr. Bayley in the purchase of the boat?—A. He was paid mileage.

Q. He was paid his necessary expenses over there?—A. He was paid mileage in lieu of all expenses, as a naval officer.

Q. In lieu of all other charges he was allowed mileage according to the Government rule of 8 cents a mile?—A. Yes, sir.

Q. How much would Mr. Bayley's instructions allow him to pay for the boat?—A. Up to \$4,000.

Q. What did he pay for the *Wavie*?—A. Three thousand four hundred dollars.

Q. Is there anything in these papers that would enable you to state how much was expended in fitting her up for the service, the gross sum?—A. For actual alterations and repairs the sum of \$352.90 was paid to the Mechanical Power Company, 456 West 58th street, New York, for work done in accordance with the specifications prepared by the engineer of the Commission.

Q. And was that all the money that was expended in fitting her for the service of the Commission?—A. There was some extra equipment which did not enter into the question of repairs.

Q. Was Mr. Bayley allowed any commission or extra allowance for purchasing this boat?—A. Not to my knowledge.

Q. By the Commission?—A. By the Commission none, and not to my knowledge by anybody else.

Q. This boat was not advertised for, as you have stated?—A. No, sir. After we had taken charge of the boat in New York Harbor an accident happened to it, which does not enter into the other question at all.

Q. Do you know whether this boat was equipped at that time for the use of the Commission?—A. Well, that is out of my line. I can not

say, except that I can say that she was used at Gloucester, New Jersey, on the Delaware, and she is now being used on Long Island Sound in the oyster investigation.

Q. Do you know whether the oyster investigation which is being prosecuted was ordered by special direction of Congress?—A. No, sir; I do not.

Q. You have not seen the boat?—A. No, sir.

Q. Do you know whether this boat was a good purchase and suitable for the use of the Commission?—A. No, sir; I do not.

Q. Do you know whether she was a second-hand boat?—A. She was a second-hand boat, about a year old, from Mr. Bayley's certificate.

Q. That appears from the papers?—A. Yes, sir.

Q. Do you know what the appropriation was for the erection of the Leadville Station?—A. Fifteen thousand dollars.

Q. Do you know whether that appropriation was exceeded in the construction of the station?—A. Two calls for bids became necessary before the matter of the construction of the hatchery at Leadville, Colo., could be undertaken. The first call resulted in but one bid, submitted by Jeremiah Erwin and Eugene Robitaille, of Leadville, Colo., whose bid was \$15,555.78 for the entire work.

Q. Was that bid accepted?—A. No, sir.

Q. Was there a re-advertisement?—A. There was, sir. In the first place, there was but one bid, which did not permit the proper competition, and it was therefore rejected and re-advertisement was made. Here is a letter which I prepared at the time to the acting Commissioner.

Q. Did you re-advertise?—A. Re-advertisement was made.

Q. What bids did you receive?—A. Re-advertisement was made calling for bids to be opened on September 20, 1889. The call was for August 10, 1889, and three bids were received. L. G. Hunt, of Leadville, bid \$12,672; Jeremiah Erwin and Eugene Robitaille bid \$14,292.60, which was considerably less than their first bid, and George Baldwin and W. W. Chronister bid \$8,743.

Q. Were any of those bids accepted?—A. The bid of L. G. Hunt, at \$12,672 was accepted.

Q. Was he the lowest bidder?—A. He was not the lowest bidder. Inquiry was made and determined that he was the most responsible. Calculations had been gone into and it was found that the lowest bidder could not build the building in accordance with the specification for any such sum of money, and as it now turns out the present contractor, even at a higher figure, claims he has been under considerable loss from the acceptance of the contract.

Q. Then the building was constructed by the contractor for a sum within the appropriation?—A. It is not all completed yet. The contract was within the appropriation.

Q. Did not that cover the entire completion of the building?—A. It covers the entire completion of the building, but not the equipment in any way.

Q. The appropriation did not cover the equipment?—A. No, sir.

Q. The building was constructed within the amount of the appropriation?—A. Yes, sir.

Q. How much did it cost for equipping the station?—A. The place is not equipped yet; it is only partially equipped. A temporary structure and an additional structure, in order to enable the last season's work to be started, was put up by the purchase of material and the employment of day labor.

Q. So as to take advantage of the season?—A. So as to take advantage of this season.

Q. Have any moneys been expended at this Leadville station out of any fund not properly usable there?—A. Not to my knowledge, sir. The station being operated, the expenses of the superintendent and the expenses of the employés there would necessarily be paid from the general appropriation for the work of propagation, and such has been the fact.

Q. Is that the fact with regard to other stations; are they paid out of the general appropriation?—A. Yes, sir.

Q. So you know of no misapplication of funds from one fund to another?—A. No, sir.

Q. In the construction of that work?—A. No, sir.

The appropriation for the station at Leadville, Colo., is worded as follows:

Fish hatchery in Lake County, Colo.: For the construction of a Government trout breeding and distributing station in Leadville, Colo., \$15,000. (U. S. Statutes 25, page 954.)

There (exhibiting) is the contract made between Lyman G. Hunt, of Leadville, Colo., and Marshall McDonald, as Commissioner of Fish and Fisheries, dated October 14, 1889, for the construction of the fish hatchery for the United States Fish Commission near Leadville, Colo., for the sum of \$12,672.

Q. They completed their contract?—A. It is not quite completed yet.

Q. And they are not fully paid?—A. And they are not fully paid.

Q. Have you any reason to think that they will fail to complete their contract?—A. No, sir; I think they are going ahead with it. It is simply a matter of delay by reason of the weather, and it has been excused.

Q. Do you know whether the building has been inspected?—A. It has been inspected there by the superintendent.

Q. It is a good building?—A. I suppose so; I have not seen it.

Q. You have heard of no complaints?—A. I have heard of no complaints.

Q. Were full and particular specifications furnished to this contractor previous to exhibiting his bid?—A. Calls for proposals for the construction of a fish hatchery at Leadville, Colo., were duly inserted in several newspapers of Colorado.

Q. According to certain specifications?—A. Yes, sir; and the parties were informed that full specifications and particulars could be obtained either by addressing the Commissioner or by applying at the office of Messrs. Orahod & Teller, at Colorado, and the bid of each bidder was attached to the specifications.

Q. What time was a copy of the contract filed with the Comptroller?—A. The contract was dated by Mr. Hunt, in Colorado, on October 14, 1889, and I have a letter, or the Commissioner received a letter rather, from the First Comptroller of the Treasury, under date of October 24, 1889, stating that the contract had been received and approved, and was filed in his office.

Q. Why was not the bid of the lowest bidder accepted?—A. The bid of L. G. Hunt, of \$12,672, and also the bid of Messrs. Erwin & Robitaille, were for the entire work. The bid of Baldwin & Chronister was for the carpenter work, including plumbing and painting, but not including the stone-work, of which a very large part of the building is composed. So that of the two bids for the entire work alone, it can be considered that the lowest bidder received the contract.

Q. The lowest bidder for the entire work received the contract?—A. Yes, sir.

Q. Had there been any of this sum of \$15,000 which was appropriated for the construction of this hatchery used before this contract was made?—A. There was.

Q. For what purpose?—A. For the preparation of plans and the payment of advertisements.

Q. For the selection of a site?—A. No, sir; that is a Government reservation.

Q. If you can state how much of this \$15,000 was expended in preparing plans and advertising, I would be glad to have you do so?—A. Two hundred and eleven dollars and thirty-five cents was paid for the survey of the property in July, 1889, which was the first expenditure.

Q. What was the necessity for that survey?—A. In order that the Land Office could be properly advised for the preparation of the papers, and so that the President could set aside the ground by proclamation.

Q. Did it involve any question as to survey of the supply and fall of water?—A. I can not tell you, sir. I was mistaken when I said before that there were no expenses in connection with it. Mr. Gay had some expenses in going out and examining that station and getting the work done in July, too.

Q. Give the amount of that?—A. Ninety-eight dollars and thirty-six cents. There were \$35 paid for drawing up and typewriting a large number of the specifications. One hundred and seventy-five dollars was paid for the preparation of the specifications and plans.

Q. Give the amount paid for advertising for bids?—A. As I stated before, on the first advertising for bids for the construction of this building, but one proposal was received, which was deemed exorbitant, and a second call was issued. These calls were issued in the Rocky Mountain News, of Denver, and the Times, of Denver, the Leadville Chronicle, and the Denver Republican.

Q. Do you know the cost of those advertisements; how much was paid?—A. Between \$85 and \$90.

Q. And the sums you have stated as having been paid out of this appropriation for a survey for the general selection of the location and for the advertisements and the preparation of specifications are the only amounts and the only bills which were paid?—A. And the service of the inspector for a part of the time.

Q. That was charged up to that appropriation?—A. Yes, sir; it was charged up.

Q. How much was that?—A. For the month of November Mr. Robinson and Mr. Sauerhoff were sent out there and put directly in charge of that work before any specific propagation work could be done, so it was properly charged to the appropriation for the establishment of the station.

Q. How much was that amount?—A. Two hundred and fifty dollars in that case, and I think that was all that was put there.

Q. That left nothing of the \$15,000 appropriated to pay for the construction, according to the contract?—A. Yes, sir; after the payment of these bills. There is now, though, a small deficit of about \$300; insufficient to meet the final payment which is not yet due. That was occasioned by reason of putting this extra building there.

Q. This temporary building?—A. Yes, sir; which is properly chargeable to the station, and I understood that it was only done after seeing one of the gentlemen in Washington connected with Colorado on his assurance that a further appropriation would be made it was authorized.

Q. What was the necessity of the construction of a temporary building?—A. In order to go ahead with the work at once. It is a building that can be used.

Q. Did it save one year's work?—A. Yes, sir; one year's time there.

Q. Do you know the expense of these temporary buildings?—A. I should say in round numbers it is between \$1,000 and \$1,200.

Q. Would those buildings be of any value to the station after the completion of the main building?—A. I understand they will. I do not know of my own knowledge.

Q. Has there been any money asked for on account of the Leadville Station to meet the deficiency for expenses at that place for the next fiscal year beginning July, 1890?—A. An additional appropriation not specifically to meet those expenses, but for the further development and equipment of the station has been asked.

Q. Do you know the amount of that?—A. No, sir; but I can tell in a moment. "An appropriation for the completion and equipment of the Government trout breeding and distributing station in Lake County, Colo., authorized by the act of Congress approved March 2, 1889, \$25,000." That item was introduced by Senator Teller in the United States Senate on January 20, 1889, and the report was also printed in the Miscellaneous Documents No. 52.

Q. Does that state how much is needed for the completion of the building?—A. No, sir.

Q. There is nothing in the reprovding for a deficiency for the construction of the building?—A. No, sir.

Q. Still you say there will be a small deficiency?—A. There will be a small deficiency.

Q. Do you know of about how much?—A. About \$300.

Q. That relates to the equipment and all?—A. Yes, sir.

Q. I will ask you again: Can you state the object of the temporary building?—A. To take advantage of the last year's season—that of 1889.

Q. Can that building be used to advantage in the future?—A. I am informed by the Commissioner that it can be used as a nursery for fry.

Q. After the completion of the main hatchery?—A. Yes, sir.

Q. Have you seen articles published in the newspapers charging favoritism on the part of the Commissioner towards different employés here?—A. I have, sir.

Q. That he has his favorites and pets and those who are not in favor with him?—A. Yes, sir.

Q. What has been your observation upon that point?—A. Well, I can not say that I have seen any special favoritism. Referring to the names that have been mentioned in the papers and the more prominent names, I should say if increased duties assigned indicates favoritism then favoritism has been indulged in.

Q. Those increased duties usually carried an increase of pay?—A. Yes, sir.

Q. It has been charged that employés here came and went with a good deal of irregularity, that they were not here promptly according to rules, and that many times they left early without leave and that they were gone at noon for a longer time than they should be for lunch. What can you state in regard to that?—A. I can only state in regard to my office, that they are there promptly on hand and are not always ready to avail themselves of clearing off at 4 o'clock, often being required to stay after that and are willing to remain after when requested.

Q. Do they receive any extra pay for that extra work?—A. No, sir.

Q. Do you know of any persons who have been employed in the Commission by Commissioner McDonald who are relatives of his, or his wife, or some connections?—A. I have heard it stated, and I believe there are some two or three gentlemen who are connections in some way. Whether they are relatives I could not say.

Q. Who are they?—A. They are C. C. Lewis, R. E. Lewis, and Francis McCormick; all young men.

Q. What are their positions?—A. Their positions are of the lower grades, generally.

Q. Do you know what their pay is?—A. C. C. Lewis is now assigned the Wytheville (Virginia) Station at a salary of \$75 a month; Francis McCormick and R. E. Lewis are employed in the offices at Washington at a compensation of \$50 a month each.

At 2.30 o'clock p. m. the subcommittee adjourned to meet at the call of the chairman.

WASHINGTON, D. C., *July 8, 1890.*

The subcommittee met at 10.30 o'clock a. m., pursuant to call of the chairman.

Present: Senators STOCKBRIDGE (chairman) and SQUIRE.

TESTIMONY OF R. E. LEWIS.

R. E. LEWIS, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. R. E. Lewis.

Q. Where do you reside?—A. In Washington.

Q. Are you in the service of the Fish Commission?—A. Yes, sir.

Q. How long have you been connected with the Fish Commission?—

A. I entered on the 1st of February, 1889; that is, on the permanent roll. I was in the temporary service in May, 1887, and also in July, on the Cincinnati roll, at the time the exposition was made there during the centennial of the Ohio Valley.

Q. By whom were you appointed?—A. I was appointed by Colonel McDonald.

Q. When you were on the temporary roll?—A. Yes, sir.

Q. What are your duties? What position do you occupy?

The WITNESS. Now?

The CHAIRMAN. Yes, sir.

A. Clerk.

Q. In what office?—A. During the last winter I was in the office of the inspector of stations, and in April I was transferred to Fort Washington as record clerk. At present I am working in Mr. Gill's office.

Q. What is your age?—A. I will be twenty-one on the 17th of September, coming.

Q. Are you related in any way to Commissioner McDonald?—A. No, sir; not to Colonel McDonald. My brother married a sister of Mrs. McDonald, and a sister of mine married a brother of Mrs. McDonald.

Q. You are doubly connected by marriage with Mrs. McDonald?—A. Yes, sir.

Q. What salary did you get when you were first appointed?

The WITNESS. On the temporary roll?

The CHAIRMAN. Yes, sir.

A. Forty-five dollars a month in the messenger service.

Q. Then was your salary increased?—A. On the Cincinnati roll I got \$50. When I went on permanently I got \$40 a month.

Q. What is your compensation now?—A. Fifty dollars. When I first went on the Fish Commission on the permanent roll I was only employed on the first floor as an usher to show visitors around.

Q. Did you go to Alaska on a trip last summer?—A. Yes, sir.

Q. Who comprised the party?—A. Dr. Bean, who was chief of it, Livingston Stone, and Mr. Booth.

Q. In what capacity did you act?—A. I was general assistant, rodman, stenographer, and clerk, and helped him in gathering fishery statistics and taking photographs, and securing what information could be obtained about the salmon fisheries of Alaska.

Q. Did you do considerable work as rodman?—A. They surveyed the Karluk River for about 4 miles above the village of Karluk, which is right at the mouth of the Karluk River. Then, besides that, they surveyed the spit, the narrow spit on which is located the canneries, which are there for the purpose of canning salmon.

Q. What compensation did you receive when upon that trip?—A. Forty dollars a month.

Q. Do you know of any other persons besides yourself who are related or connected with Commissioner McDonald or his wife, who are employed in the Commission?—A. I know McCormick. He is the only one I know.

Q. What is his relationship to the Commissioner?—A. He is not related to the Commissioner. He is a nephew of his wife.

Q. A nephew of Mrs. McDonald?—A. Yes, sir.

Q. At what time do you report for duty in the morning?—A. Nine o'clock.

Q. What time do you leave?—A. At 4, although we do not always get there on time, generally five minutes late, but we very seldom leave there until some minutes after 4.

Q. Are you in the habit of taking quite a recess at noon?—A. From a half an hour to forty minutes, something of that sort.

Q. What is your observation as to employés; are they on hand promptly, and do they remain until office hours are up?—A. Yes, sir.

Q. That is the general rule?—A. Yes, sir; and I think it is strictly observed.

Q. You spoke of being detailed to Fort Washington; was that this last summer?—A. This last spring.

Q. Do you know what was done with the fish taken for spawn?—A. They were sent to market here in Washington.

Q. Do you know what disposition was made of the money received from the sale of the fish?—A. The money is used in defraying the expenses of running the seine. The seine is operated by the Fish Commission, and the proceeds are used in paying the seine haulers and other expenses, such as the seine boat, the fish lighters, and fish tenders.

Q. Do you know whether the amount of money received this year from the sale of fish was sufficient to pay the expenses of operating the seine?—A. No, sir; it was not.

Q. How much did it lack?—A. It lacked \$25 to \$30.

Q. Do you know that that disposition was made of the money?—A. Yes, sir; I know it.

Q. Do you know anything about the use of intoxicating liquors by the employés of Fort Washington?—A. No, sir; there might have been some men who had whisky by themselves, but I never saw a man un-

der the influence of it when I was there. I myself had a little down there in a bottle to make punch with in the morning.

Q. There was no one connected with the Commission who kept liquors of any kind on sale to employés or others?—A. No, sir; I have never seen a glass of liquor or anything of the sort sold there in my life, except from the boat. Men buy it from the boat and drink it right off the boat.

Q. Have you seen various articles published in the newspapers reflecting upon the general management of the Fish Commission?—A. Yes, sir.

Q. In those articles it was charged that there was a good deal of looseness in the central station here; that employés were not held to regular hours of service; and it was also charged that there was a good deal of favoritism, that Commissioner McDonald had his favorites and pets, whom he favored by advancing their salaries and otherwise, and that there were others whom he seemed to be prejudiced against, who could not secure advancement. What is your observation on that point?—A. My observation is just the contrary.

Q. You know nothing of that kind?—A. On the contrary, before I entered the Fish Commission I had been boarding at Colonel McDonald's house for some time. I was at school here a couple of years before I went into the Fish Commission, and I remember quite frequently that Colonel McDonald remarked whenever that subject was mentioned to him that the men he liked the best always had the worst time.

TESTIMONY OF CHARLES E. GORHAM.

CHARLES E. GORHAM, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. Charles E. Gorham.

Q. Where do you reside?—A. Thirteen hundred and forty-three Q street, Washington.

Q. Are you in the service of the Fish Commission?—A. Yes, sir.

Q. In what capacity?—A. Architect and draughtsman and engineer.

Q. How long have you been in the service of the Commission? When did you enter the service first?—A. I entered permanently in 1883, but before that I had done work for Professor Baird for a number of years, since 1876.

Q. When you entered permanently were you appointed by Professor Baird?—A. Yes, sir.

Q. Have you occupied the same position all the time?—A. Yes, sir.

Q. Has your pay been changed during that term of service?—A. It has been changed from \$150 to \$6 a day.

Q. When was that change made?—A. Two years ago.

Q. By Commissioner McDonald?—A. Yes, sir.

Q. Were your duties increased at the time your pay was increased?—A. Well, no. It amounts to about the same, a little more. It averages \$6 a month more during the year, provided I work all the time.

Q. Do you work all the time?—A. Yes, sir.

Q. Have you steady employment?—A. Yes, sir.

Q. Do you know Mr. E. I. Rogers?—A. Yes, sir; he works in my room.

Q. He is a draughtsman?—A. Yes, sir.

Q. Is Mr. Rogers a skillful draughtsman?—A. He is a very good draughtsman.

Q. Do you know anything about Mr. Rogers being promised an increase of salary and not receiving it?—A. I do not know of his being definitely promised. A year ago I asked the Commissioner to increase his salary. He was working under my observation. The Commissioner said he could not do it just then, but to leave the matter to him; that he would fix it up as soon as he found an opportunity, or something to that effect.

Q. Is Mr. Rogers a relative of yours?—A. He is not.

Q. Do you know a Mrs. Palmer?—A. I know there is such a lady in the Commission, but I am not personally acquainted with her.

Q. Do you know what her duties are?—A. She is under Mr. Scudder; I know she is a clerk there. She is on another floor from me.

Q. You do not know much about her?—A. No, sir.

Q. Do you know Mr. Gay?—A. Yes, sir.

Q. What is your opinion of Mr. Gay's ability and fitness as a constructor of buildings?—A. I do not think he understands architectural work. I do not know that he pretends to.

Q. And as to the practical direction and oversight of the erection of buildings?—A. I do not know very much about that. I have done some work in conjunction with him—the preparation of plans—but I should not call him an architect by any means. He may have some knowledge of construction.

Q. Do you know of expenditures made by him at the Put-in-Bay station caused by his unnecessarily lowering the building there?—A. I do not know anything about it, except from hearsay. Mr. Bayley had charge of that construction, and I had nothing to do with the plans of that at all. I know the building was lowered, but I have not been out there, and I do not know whether it has been an advantage or otherwise.

Q. Have you seen various newspaper articles which have appeared within the last month or so attacking the general management of the Commission?—A. I think I have seen nearly all of them.

Q. You noticed that in those articles it was charged that there was a general lack of system; that there was loose management of affairs, etc. What should you say from your knowledge and observation as to that?—A. I should say that it was to the contrary. I think there has been a very marked improvement since the present Commissioner has been there. I have been there a good many years.

Q. Do you think the business methods pursued are good?—A. They are superior to what they were under the previous administration. I think they are good.

Q. As to the attendance of employés at this Central Station, are they on time in the morning, and do they stay there until the hours are up? I think the hours are from 9 until 4.—A. Yes, sir.

Q. What is your observation as to the promptness of attendance?—A. I think the attendance is good.

Q. It was charged in these newspaper articles, and in fact one witness testified, that the employés seemed to come and go as they pleased; they came late and went early. What is your observation on that point?—A. I do not think they do, as far as I know. I know that if a clerk wants to be away he has to apply to the chief clerk or the head of his division, and it is charged up against him. Even for a half day or several hours he has to be excused.

Q. Do the employés work over hours?—A. Many of them do; they do sometimes. I work a great deal overtime.

Q. Do you get any credit for overtime?—A. Not always. I suppose we do from our immediate chief, but we do not get any pay for it.

Q. One of the charges is that there is a good deal of favoritism, that Commissioner McDonald has his favorites, who have soft places and whose pay has been advanced, and that there are others who do not receive that consideration. What is your observation on that point?—

A. I do not think Colonel McDonald has any marked favorites. He has some men who have been promoted, but I do not think they receive any more than their work entitles them to.

Q. Were they promoted on account of long service and proficiency?—

A. Yes, sir. As a general thing the clerks in the Fish Commission are paid less than in any other Department. I mean those doing merely clerical work. Men who have been there five and six years only receive fifty or sixty or seventy-five dollars a month who would be receiving more in other Departments.

Q. I will read you the resolution of the Senate under which this inquiry is being conducted:

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's Office, and especially in respect of the changes in the force, compensation paid to employés, and any alleged favoritism or other undue administration, and report to the Senate thereon.

If you have any information on any point embraced in the resolution which I have not drawn out by questions, and which you consider material, the committee would be glad to have you state it in your own way. If you have any criticisms to make on the general management of affairs please do so.—A. I have no criticisms to make. I consider Colonel McDonald to be an efficient and honest officer of the Government.

Q. There has been quite an increase within two years in the number of employés. Do you consider the increase of force employed excessive, considering the increased amount of work done by the Fish Commission?—A. Congress has added new fish stations every year, and there has been a necessary growth and increase. I do not think there are any more clerks employed in proportion to the work done than before; perhaps less. There has been very little increase in the main office, the most of it being connected with the establishment and maintenance of these stations.

Q. Where new stations are established does it necessitate the employment of additional force?—A. They have added six or eight new stations in the past few years.

Q. Have you been at the Leadville Station?—A. No; I have never seen there. I drew the plans and did the architectural work in connection with it. I have been at a number of stations.

Q. I believe you stated that you have never been at the Put-in-Bay Station?—A. No, sir; I have never been there. I have been at nearly all the rest.

Q. Have you been at the Northville Station?—A. Yes, sir.

TESTIMONY OF WALTER ROBERT SAUERHOFF.

WALTER ROBERT SAUERHOFF, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your full name?—A. Walter Robert Sauerhoff.

Q. Where do you reside?—A. In Baltimore.

Q. Are you in the employ of the Fish Commission?—A. Yes, sir.

Q. When were you appointed in the Commission?—A. I first went on in 1878.

Q. That was under Professor Baird?—A. Under Professor Baird.

Q. What position did you occupy?—A. Machinist.

Q. What is your present occupation?—A. Machinist.

Q. What was your pay at the time of your employment?—A. Sixty-five dollars.

Q. What is it now?—A. Eighty dollars.

Q. Have your duties been increased?—A. Well, I can not say that they have; in one way, I am in charge of the shop. When I first went on I was in charge of a boat.

Q. You ran a boat?—A. Yes, sir.

Q. Now you are in charge of a shop?—A. Yes, sir.

Q. Was your pay increased when you took charge of the shop?—A. No, sir; whilst I was on the boat.

Q. Are you related to Mr. William P. Sauerhoff?—A. A brother.

Q. Have you ever worked on models of fish-ways or on the McDonald filter during office hours?—A. I have worked on the McDonald filter. I may have worked on the fish-way, some little job, but not to any extent.

Q. In regard to this filter, is it the filter which is being used at the Central Station?—A. Yes, sir.

Q. What sort of work did you do upon it?—A. Some turning and drilling.

Q. Machinist work?—A. Yes, sir.

Q. Is it in successful operation?—A. Yes, sir.

Q. Do you know whether it is a valuable invention?—A. Yes, sir.

Q. It answers the purpose?—A. Yes, sir; it answers the purpose.

Q. Do you know anything about the necessity for having such a filter? The water filtered is used for what purpose?—A. It is used for drinking water and for the aquaria for the fish.

Q. Do you know of any other employes of the Fish Commission besides yourself who have worked on the models or alterations of the filter during office hours?—A. Yes, sir; Mr. Barry, also a machinist.

Q. That work was done regularly, the same as you do any other work?—A. Yes, sir; although not to interfere with other work. That was our order from the Commissioner, not to let that interfere with any other work in the building.

Q. When you were not otherwise employed you did more or less work upon it?—A. Yes, sir.

Q. At what time do you go on in the morning?—A. Eight o'clock, between 8 and 9.

Q. And work until when?—A. Four or 5. Sometimes we work later, as the occasion requires. Sometimes we are required to be there later; all night if necessary.

Q. You put in all your time?—A. Yes, sir.

Q. Did I understand you to say that you were employed in the shop

at Baltimore?—A. I am employed in the shop here, and live in Baltimore.

Q. Have you seen some newspaper articles published within the last month or so reflecting upon the general management of the office here?—A. I saw one or two.

Q. It was charged in those articles that the general management was loose; that employes came late and went early, and did not put in steady work. What is your observation or knowledge on that point?—

A. I think they do what is right and make all the time they are called on to make. In our machine-shop we have two launches, the station at Fort Washington, besides the work done in the building and the carp ponds. We are necessarily called in to go in and out from those places.

Q. That is in the regular way of your duties?—A. Yes, sir.

Q. It has been charged that the Commissioner had pets and favorites whom he favored, giving them easy work and advanced pay, etc., while others he did not seem to care so much about. Can you say anything on that point?—A. No, sir.

Q. Nothing of that sort has come under your observation?—A. No, sir.

Q. Are there more men employed in your department now than during Professor Baird's administration of the office?—A. There may be in this building at present, but they have only been taken from other places and brought here.

Q. Were they brought here on account of an extra amount of work to be done?—A. Yes, sir.

Q. Of what sort; in connection with what?—A. We have two launches here. We did not have them at that time. We have stations that we had not then. We do work here at the building that was not done before.

Q. Have you anything to state generally touching this matter that we are directed to inquire into under the resolution of the Senate? What would you say generally as to the general management of affairs? Is it systematic and business-like, or is it loose and careless?—A. I should say it was carried on very systematically, so far as I can see; so far as it comes under my own eye. Outside I could not say.

TESTIMONY OF CHARLES W. SCUDDER.

CHARLES W. SCUDDER, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. Charles W. Scudder.

Q. Where is your residence?—A. I live at Takoma Park.

Q. You are employed in the Fish Commission?—A. Yes, sir.

Q. In what capacity?—A. As record clerk.

Q. Have you read certain articles published in various newspapers, the New York Press particularly, reflecting upon the general management of the Commission?—A. I have; they all pass through my hands.

Q. You remember that in those articles it was charged that the Commissioner had relatives of his own and of his wife in the employ of the Fish Commission here. What do you know as to that?—A. I know only what they tell me, that there is only one; one nephew of his wife.

Q. What is his name?—A. McCormick. I do not know his initials.

Q. Do you know Mr. Lewis? Is he not a relative?—A. I know him. I do not know how that is. I never heard him say anything about it.

Q. So that as far as you know McCormick is the only relative of Mr. or Mrs. McDonald who is employed in the Fish Commission?—A. Yes, sir.

Q. Is he a competent person in his position?—A. He is not in my office, and I do not know anything about his work.

Q. Have you a brother employed in the National Museum?—A. Yes, sir.

Q. How long have you been in the employ of the Fish Commission?—A. I first went on the Commission December, 1882.

Q. By whom were you appointed?—A. Professor Baird.

Q. What position did you occupy then?—A. As clerk under Mr. Smiley.

Q. What was your pay then?—A. Seventy dollars a month.

Q. What position do you now occupy?—A. Record clerk.

Q. What is your present compensation?—A. One hundred dollars a month.

Q. Are your duties more arduous and responsible in the position you now occupy than in the one you formerly occupied?—A. Certainly. I have charge of all the records and am responsible for any records that may be wanted, so that I can get them.

Q. Correspondence and business records and everything of that sort?—A. Everything of that kind.

Q. When was your pay increased?—A. It was first increased in 1884 to \$83 $\frac{1}{3}$ a month—a thousand dollars a year.

Q. That was under Professor Baird?—A. Yes, sir; on Mr. Smiley's recommendation.

Q. Upon Mr. Smiley's recommendation?—A. Yes, sir.

Q. Were you in Mr. Smiley's department at that time?—A. Yes, sir.

Q. When was the next increase?—A. I have some papers here which, if you will allow me to look at, I can answer precisely [consulting papers]. There is the first letter of Mr. Smiley's recommending my promotion.

The letter is as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., June 26, 1884.

DEAR SIR: It is with much satisfaction that I can report the constantly increasing efficiency of Mr. C. W. Scudder's work. I am now able to accomplish very much more in the division than two years ago, and you are aware that our opportunities for work have been constantly increasing. However, the satisfaction of increased usefulness makes this fact a welcome one. In many ways which you have doubtless observed, and in many not so prominent, Mr. Scudder has contributed to this efficiency. With the beginning of the fiscal year, 1884-'85, I feel that it would be proper to advance his salary to \$83 $\frac{1}{3}$ per month, and so respectfully recommend. Please accord your usual, kind consideration to the matter.

Very truly,

CHAS. W. SMILEY,
Division of Records and Publications.

Prof. S. F. BAIRD,
Commissioner.

(Across the corner in ink:) Recommended. Herbert A. Gill.

(Across the face in red:) Asks Mr. Scudder's salary be increased to \$1,000 per annum.

(Stamped in red:) U. S. Commission of Fish and Fisheries, Division of Accounts, June 30, 1884. Herbert A. Gill, D. A.

The WITNESS. The notification of Professor Baird to me is attached thereto.

The letter is as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., June 30, 1884.

DEAR SIR: On the recommendation of Mr. Smiley, who commends very highly your efficiency in his division, I take pleasure in informing you that your compensation will be increased from the 1st of July to \$83½ per month.

The disbursing agent of the Commission has been instructed accordingly.

Very respectfully,

S. F. BAIRD,
Commissioner.

CHAS. W. SCUDDER, Esq.,
Division of Records, U. S. Fish Commission, Washington, D. C.

The WITNESS. My next increase was in July, 1885.

Q. Still under Professor Baird?—A. Yes, sir. Here is the recommendation of Mr. Smiley. He recommends in that that I have a hundred dollars. I was increased to \$90. There is another increase of \$1.66 a month, and this last increase was on the recommendation of Mr. O'Connor, the chief clerk, which was last July, a year ago.

The letter of Mr. Smiley referred to above is as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., June 25, 1885.

DEAR PROFESSOR: With the close of the fiscal year I feel called upon to report the general efficiency of my assistants and to recommend them to such advancement financially as you may find in harmony with your plans for 1885-'86.

Mr. Scudder has had added responsibility since January 1 in the matter of mailing, and you have had opportunity to know of his value in this respect. I think he should rank at least as a first-class clerk at \$100 per month if you have the means to place him at that rate.

Mr. Latimer and Mr. Davidson have been monthly growing more efficient during the year and may properly be advanced from \$50 per month to \$60 per month, in my judgment.

I would also recommend the advance of Parker's salary from \$25 to \$30 per month.

Very respectfully,

CHAS. W. SMILEY.

Prof. S. F. BAIRD,
Commissioner.

(Indorsed:) Asks salaries of his assistants be advanced.

(Stamped:) Commission of Fish and Fisheries, Division of Accounts, July 20, 1885.
Herbert A. Gill, D. A.

Professor Baird's notification to Mr. Scudder is as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Woods Holl, Mass., July 20, 1885.

DEAR SIR: Upon the recommendation of Mr. Smiley, I have decided to increase your compensation to \$90 per month, to take effect from the 1st instant.

Very respectfully,

S. F. BAIRD,
Commissioner.

CHAS. W. SCUDDER,
U. S. Fish Commission, Washington, D. C.

Q. It has been charged in some of these newspaper articles that employés at the Central Station came late and left early, and were away a long while at noon, and generally that they came and went about as they pleased. What can you say on that point?

The WITNESS. Do you mean at the general office?

The CHAIRMAN. Yes, sir.

A. Well, I have not seen anything of that since—well, for a year back I have not seen any loafing or lounging around. Of course people speak civil words as they go by.

Q. Is it your observation as a rule that employés are on time and remain until 4 o'clock or after?—A. Yes, sir. I get there at a quarter of 9, and do not leave until ten or fifteen minutes after 4. Before I was transferred from Mr. Smiley's office the employés under Mr. Smiley were obliged to wait for him to come in to do his work in the morning.

Q. Do you mean that he was not there at 9 o'clock?—A. He was not there at 9 o'clock; in fact, he seldom was there before 10.

Q. And you had to wait his coming?—A. Yes, sir; and not only in the morning, but in the afternoon, he would be absent for an hour or two. If we ran out of work during his absence we would have to wait until his return.

Q. You had to amuse each other?—A. We tried to help each other as much as possible, but sometimes we all ran out at once and we had to wait until he returned.

Q. It was charged in these newspaper articles in a general way that there was a good deal of favoritism exercised, that Commissioner McDonald seemed to have his favorites, whose salaries would be apt to be advanced, and whom he favored in various ways, while others were treated quite differently. What is your observation on that point generally?—A. I have not seen any favoritism. Some persons who have worked out of office hours have been promoted. If favoritism consists in promoting persons who work night and day perhaps that is so. During last summer, after I was advanced, I had to take work home at nights to perform to get through with it.

Q. You had more work than you could do during office hours?—A. Yes, sir. Dr. Bean, who was editor, was away in Alaska. I was his assistant and had to look out for the editorial work during his absence, and that work I had to take home at nights to do.

Q. Did you receive extra pay for that?—A. No, sir.

Q. Is it the rule where employés are called on for extra hours of work to give them extra pay?—A. No, sir; I do not think so.

Q. If you have any knowledge on subjects embraced within the resolutions of the Senate which we have not drawn out by questions, we would be obliged to you if you would state it in your own way.—A. No, sir; I have no knowledge.

I noticed in the articles that Mr. Smiley charged me with incompetency, and I want to show that he put me in charge of his division during his absence. I therefore submit several letters on the subject.

The letters are as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., May 9, 1883.

DEAR PROFESSOR: I respectfully request leave of absence for to-day and to-morrow. I have designated Mr. Scudder to take charge of the division if I am absent.

Yours truly,

CHAS. W. SMILEY.

Prof. S. F. BAIRD,
Commissioner.

Approved.

S. F. BAIRD.

(Indorsed :) Request leave of absence for May 9 and 10; Mr. Scudder to take charge of the division.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., May 9, 1883.

Dear Mr. SCUDDER: During my absence to-day and to-morrow please act as chief of division of record.

Yours truly,

CHAS. W. SMILEY.

(Indorsed :) During absence Mr. Scudder to act as chief of division of record.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., August 9, 1883.

DEAR PROFESSOR: I have decided to try and get off to the American Association meeting which opens at Minneapolis the 15th. I will need to leave here Sunday or Monday next. Everything is in pretty good condition here, and Mr. Scudder will be in charge during my absence. Mr. Snell wishes to be away while I am gone, which will be convenient.

Please indicate your approval of this arrangement if it meets with your wishes.

Yours truly,

CHAS. W. SMILEY.

(Indorsed:) Leave for American Association meeting at Minneapolis Monday next. Mr. Scudder will be in charge.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., August 22, 1884.

DEAR PROFESSOR: I am suddenly called away by the death of an uncle in Maine, whither I shall proceed at once. I purpose going from there to Montreal. I shall return to Philadelphia by September 3. If the office affairs require me then I will proceed to Washington, but shall probably return to Philadelphia for a few days of the A. A. S. Mr. Scudder will be in charge during my absence.

Yours, truly,

CHAS. W. SMILEY.

Prof. S. F. BAIRD,
Commissioner.

(Indorsed:) Suddenly called away by death of an uncle in Maine. Shall visit Montreal; return to Philadelphia by September 3. Mr. Scudder in charge during absence.

TESTIMONY OF FRANK McCORMICK.

FRANK McCORMICK, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. Frank McCormick.

Q. Your residence is in Washington?—A. In Washington.

Q. Are you in the employ of the Fish Commission?—A. I am.

Q. When were you appointed?—A. I was appointed two years. I have been in the Fish Commission two years and three days.

Q. By whom were you appointed?—A. I think I was appointed by Professor Rathbun.

Q. Who is he?—A. He is the assistant in charge of the division of scientific inquiry. He recommended me for appointment. Of course I suppose the appointment was made by Commissioner McDonald.

Q. Are you related to Commissioner McDonald?—A. No, sir; except by marriage. Colonel McDonald is my uncle by marriage. Mrs. McDonald is my father's sister.

Q. She is your aunt?—A. Yes, sir.

Q. What were your duties when first appointed?—A. The same as they are now—copyist and messenger.

Q. What was your compensation when appointed?—A. I received \$40 a month.

Q. And that salary was increased?—A. I think about a year afterwards I received \$50 a month, an increase of \$10 a month.

Q. Was the compensation of other persons occupying the same position increased at the same time?—A. Yes, sir; I am the only copyist and messenger in Mr. Rathbun's room. Mr. Hinrichs and I both received the same compensation. His salary was increased to \$60 a month and mine to \$50.

Q. Were your duties increased? Why was that increase made?—A. I do not know.

Q. Were your duties increased?—A. No, sir; I can not say they were.

Q. What is your present salary?—A. Fifty dollars a month.

Q. What time do you report in the morning?—A. Nine o'clock.

Q. What time do you leave?—A. Four o'clock.

Q. Do you arrive there promptly in the morning at 9 and stay until 4?—A. Of course we are a little late now and then, but we never leave the office before 4 o'clock, except Saturday evening, which is 3 o'clock.

Q. Is that the rule, that you are there after 9 o'clock, or is coming after 9 o'clock the exception?—A. Nine o'clock is the hour.

Q. And you are usually there?—A. We are very often about five or ten minutes late.

Q. Your duties have been at this station all the time?—A. Mr. Rathbun's office used to be in the Smithsonian Institute, when I was first appointed. After the old Armory building was fitted up we all moved down there and have been there ever since.

TESTIMONY OF NEWTON W. SIMMONS.

NEWTON W. SIMMONS, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. Newton W. Simmons.

Q. Where do you reside?—A. I make my home in Washington, but most of my relatives are at Wilmington, Del.

Q. Are you connected with the Fish Commission?—A. Yes, sir.

Q. How long have you been in the service of the Fish Commission?—A. I came on in 1878. I did some work for the Fish Commission in conjunction with the State of Maryland in 1878, May until June. Then I came back in 1879 and was paid by the Government, but that was only temporarily.

Q. You were appointed by whom?—A. By Professor Milner. He was in charge of the work then. He was the fish culturist, stationed at Havre de Grace at the time I was appointed.

Q. What was your compensation?—A. Two dollars per diem.

Q. What were your duties?—A. Messenger, and distributing fish and attending to distribution work.

Q. On cars?—A. They had no cars at that time. We were traveling in baggage-cars. There has been an improvement since then.

Q. Has your compensation been increased since you first entered the service?—A. I was increased from \$2 to \$2.50 per diem, and then \$90 per month, and my present compensation is \$100 per month.

Q. When was your compensation increased to \$100 a month?—A. In 1885.

Q. That was under Professor Baird's administration?—A. Yes, sir.

Q. It remains the same?—A. Yes, sir.

Q. Is that what is paid others who have charge of cars?—A. Yes, sir; my present duties.

Q. What do you do when you are not off on the cars?—A. We are about nine months in the field doing car work, and when not engaged in that I go into the office.

Q. What do you do in the office?—A. Clerical work.

Q. Are you employed in the office at this time?—A. At present.

Q. What hours do you observe in your office?—A. Nine until 4.

Q. Are you there during that time?—A. Yes, sir; taking out a half hour or three-quarters for lunch. Sometimes I leave, and sometimes I do not; just as I feel disposed.

Q. Have you seen some newspaper articles commenting and criticising the management of the Fish Commission?—A. I have.

Q. You perhaps remember that in these articles it was charged that there has been a very large increase in force under Colonel McDonald. Do you know anything about that?—A. I think there has been. I think that is owing to the work demanding it.

Q. Has the work of the Fish Commission increased?—A. Very much. I think it has improved very much under the present administration, and that it is conducted in a very systematic manner.

Q. You distribute more of fish and to more points?—A. Yes, sir; and make more mileage, and the work in every respect has increased very much, so far as I know, on the work I am engaged in.

Q. Tell me about this: You go off with a car and distribute fish; do you live on the car?—A. Yes, sir; and we buy our subsistence. They furnish the cook.

Q. The Government furnishes the cook?—A. Yes, sir.

Q. And you live in a mess?—A. We have a mess.

Q. Does the Government furnish any wine and cigars?—A. No, sir.

Q. Have you ever known of invited guests on such trips and having wine and cigars, etc., furnished by the Government?—A. No, sir.

Q. If anything of that sort had been done would you have been apt to know it?—A. On my car.

Q. And you would have been apt to have known it if it had occurred on other cars?—A. Yes, sir.

Q. How many cars are employed by the Commission?—A. Three.

Q. It has been charged in these articles that Commissioner McDonald exercises a good deal of favoritism, that he advances the pay of certain employés and not of others doing the same work, and that he has in various ways exhibited favoritism among employés. Have you any knowledge on that point?—A. I know there have been some promotions, but I think they have been in the line of civil service. Persons have learned more about their work, and deserved it.

Q. Is there a percentage of loss of young fish in transportation?—A. Yes, sir; a small percentage. It depends upon the length of the trip and the condition of the fish.

Q. During the last two years, how has that percentage of loss compared with former years?—A. I think it is very small, to my knowledge; that is, the work I have been engaged in. We have made some very successful trips.

Q. Please state the usual number of young fish taken out in a car.—A. What kind? We distribute several kinds of fish—shad, trout, and whitefish. The usual capacity of a car is a million to two million shad and about as many white fish—a little more of whitefish—about two million to two million and a half.

Q. Do you make any difference in the number of fish which you take on a car on account of the length of the trip?—A. All these fish that we send out are to fill orders; are to fill applications which have been made. It depends on the size of the order. We carry out the number of fish to supply these orders.

Q. Do you usually take about all you can take in a car?—A. Yes, sir.

Q. What is the average number?—A. Shad, from 1,000,000 to

2,000,000; whitefish, about 2,000,000 to 2,500,000; and trout, about 10,000. It depends on the size of them.

Q. Have you made any trips for the distribution of shad this year?—

A. Yes, sir.

Q. How many trips have you made this year?—A. Two or three this year. I did not get back until very late, and the season was very nearly over. I was engaged in pike and perch work in Ohio.

Q. You did not put in a full season?—A. No, sir.

Q. Where were the fish distributed?—A. In Connecticut.

Q. Did you meet with much loss this year?—A. About the same as usual.

Q. The fish were pretty healthy. Do you make a report to the office upon each trip?—A. Yes, sir; I make a report of every trip I make.

Q. Do you report the percentage of loss?—A. Yes, sir.

Q. On each trip?—A. Yes, sir.

Q. Do you meet with the loss of any shad on these trips?—A. Yes, sir; a small percentage.

Q. Do you know the percentage?—A. I think about 5 per cent.

Q. From your experience as a messenger in the distribution of shad, what do you honestly consider to be the condition of fish taken out this year as compared with former years?—A. I have only made, as I said, one or two trips. What fish I had were in good condition.

Q. As good as in former years?—A. Yes, sir.

Q. Were they all strong and healthy fish?—A. Yes, sir.

Q. Do you not think that if all the young fish had been properly handled in hatching and nursing many of them would have been strong enough to have been planted in other rivers at a greater distance from the place of hatching?—A. That is a question I could not answer, because it is work connected with the stations, and, as I said, I have not been here but a few days. I was out on the trip and did not know much about them.

Q. From the best of your knowledge and belief what would you think was a fair and honest count of the fish in each can; about how many fish in each can?—A. They average about 25,000 to a can. It depends upon the size of the can. They have two or three different sizes of cans. What we call the wood-bound can averages about twenty or twenty-five thousand. Then we have a larger can, called the iron-clad can, holding more.

Q. About 25,000?—A. More than that, about 30,000.

Q. How have the cans been filled this year as compared with former years?—A. I do not know any difference.

Q. Did you notice the difference between this year and former years?—

A. If they make a shorter trip they crowd them and put more in. If they go on a longer trip they do not put in so many.

Q. On a short trip it is safer to put in a larger number than on a long trip?—A. Yes, sir; therefore they may reach more than 30,000.

Q. Did you candidly believe you carried the number of fish in each can which you were said to have carried?—A. I could not dispute that; I think so. That is something I would not swear to, because the number of fish put in there is only an estimate.

Q. You do not put the fish up in the cans?—A. No, sir.

Q. You take charge of them in the car?—A. When they are turned over to me.

Q. From the appearance of the cans you would think the number was about the usual number or more or less?—A. Sometimes they might

make a bad estimate, but I would not say they were not. I do not think it would be much difference.

Q. Do you deem it advisable to carry 50,000 young shad on a long trip as far as Florida?—A. If the weather was favorable I think it would be. That is only about twenty-four-hours' run. I would not like to cross the continent with that many.

Q. You think to run to Florida it would be safe to put in 50,000 shad?—A. Yes, sir.

Q. How far west have you ever been in distributing fish?—A. Montana.

By Senator SQUIRE:

Q. Have you ever been to Washington?—A. No, sir.

Q. Do you know of any shipments of fish made there?—A. I think there have been cars there.

Q. What points?—A. Walla Walla, I think.

By the CHAIRMAN:

Q. Do you know whether any fish have ever been taken to Seattle or about there?—A. I think some have been taken to Puget Sound.

By Senator SQUIRE:

Q. Who was the man who took the fish out there?—A. Mr. Ellis.

Q. Is he in this city now?—A. No, sir; he is at Wood's Holl, Mass.

Q. Has he ever come here?—A. Yes, sir; he has been ordered to report here for duty.

By the CHAIRMAN:

Q. With regard to this car service; going out with fish is confined to a certain part of the year?—A. We work in the seasons of the different fishes.

By Senator SQUIRE:

Q. One kind of fish at one time of the year, and another kind at another time?—A. Yes, sir.

By the CHAIRMAN:

Q. When are the shad sent out?—A. The last of April or the first of May.

By Senator SQUIRE:

Q. What other kinds of fish?—A. Brook-trout and white-fish.

By the CHAIRMAN:

Q. During what season of the year are trout sent out?—A. In the winter.

By Senator SQUIRE:

Q. What time of the year are white-fish sent out?—A. Early in the winter.

Q. What time of the year are shad sent out?—A. They commence the last of April.

Q. What other kinds of fish are sent out, carp?—A. Yes, sir.

A. What time of the year?—A. The fall; November.

Q. Of which kind of fish do you send the most of to the West?—A. Indigenous fish seems to be distributed more.

Q. You mean by indigenous those fish common to the United States of America?—A. Yes, sir.

Q. Carp is a German fish?—A. Yes, sir.

Q. What kinds of indigenous fish?—A. Mississippi and Illinois Rivers fish, the collecting points Maredosia and Quincy, Ill.

Q. Of these different kinds of fish you have named what kinds have you shipped the most of to the West?—A. Bass, crappies, and ring perch.

Q. Do you ship those to the waters of the Pacific coast, or do you ship them to the inland streams?—A. The inland streams.

Q. Of what kind do you ship most to the Pacific coast?—A. Shad; in California, the Sacramento River.

Q. Is there any difficulty in procuring sufficient quantities of these fish so as to supply the Pacific coast, to supply whatever demand may exist from time to time? Is there any particular reason why there should be any failure to supply the demands made from time to time?—A. No, sir. If any applications are made for fish we always fill them.

By the CHAIRMAN:

Q. Where are the salmon hatched?—A. At a station in California.

Q. You do nothing with salmon on the Maine coast?—A. We have a station at Bucksport, Me.

Q. Have you ever been there?—A. No, sir. I think the station in California is on the La Cloud River.

Q. Are not the salmon on the Atlantic coast different in their species from the salmon on the Pacific coast?—A. Yes, sir.

Q. The Kennebec salmon is different?—A. Yes, sir.

By Senator SQUIRE:

Q. I think the favorite salmon is hook-jaw or *Uncorhyncus*?—A. Yes, sir.

By the CHAIRMAN:

Q. Do you know of any relatives of Commissioner McDonald in the service, having been appointed by him?—A. I do not think he has any blood relations at all; he has some connections.

Q. By marriage?—A. Yes, sir.

Q. Give us the names of any persons of that kind you know of.—A. Mr. McCormick and two Mr. Lewises.

Q. Do you know of any others said to be relatives?—A. No, sir; I do not know how closely they are related. I am sure they are not blood relations.

Q. Do you happen to know of their service; that is, are they capable and efficient men in the places they occupy?—A. Yes, sir.

Q. You have some knowledge of them?—A. Yes, sir. If they were not, I think there would be some complaints made.

Senator SQUIRE. It seems to be generally understood that these men are related.

The CHAIRMAN. Yes.

By Senator SQUIRE:

Q. There are three, are there not, two Lewises and Mr. McCormick?—A. Yes, sir.

TESTIMONY OF HUGH M. SMITH.

HUGH M. SMITH, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where do you live?—A. No. 1248 New Jersey avenue.

Q. Here in Washington?—A. Yes, sir.

Q. Are you in the service of the Fish Commission?—A. Yes, sir.

Q. In what capacity?—A. I am in charge of an office under Captain Collins.

Q. What branch of the service is that?—A. The fisheries division. We have to deal with the commercial aspect of the fisheries.

Q. How long have you been in the service?—A. Since the 1st of January, 1886.

By Senator SQUIRE:

Q. What do you mean by dealing with the "commercial aspect"?—A. In contradistinction to the propagating work. We get out statistical and other reports on the fisheries and investigate the fishing grounds and the methods of fishing.

Q. Does not that relate to propagating?—A. No, sir; we have nothing to do with that.

Q. You mean you have to do with the creation of these new stations and things of that kind?—A. No, sir; that comes under the propagation branch.

Q. You mean you get the statistics of what fish are caught?—A. The statistics of men, apparatus, and products of all the fisheries of the United States.

Q. Private fisheries?—A. Yes, sir. We investigate the commercial fisheries of the different States and prepare reports on them.

By the CHAIRMAN:

Q. You keep track of the salt water fisheries and coast fisheries?—A. Yes, sir; we have to deal chiefly with the salt water fisheries.

By Senator SQUIRE:

Q. From whom do you get the statistics?—A. We get them ourselves. We send men into the field.

Q. You send men to get statistics of what fish are caught on the banks of rivers up north?—A. Yes, sir.

Q. Different kinds of fish, tonnage, etc.?—A. Yes, sir; and the number of vessels, the nationality of the men, etc. All those things would be covered by a complete investigation of the fisheries of the country. We have now in the course of publication, or preparation, a complete statistical and historical account of the fisheries of the United States, which material has been collected by men of our office.

Q. What is the principal object this branch of the department has in getting this information?—A. We have frequently had occasion to furnish information to Congress and to the Executive Departments, and when the international fisheries conference was in session we furnished much information to them relating to the fisheries of the United States.

By the CHAIRMAN:

Q. By whom were you appointed?—A. By Professor Baird.

Q. What position did you occupy at first?—A. I was simply a copyist; I suppose the position would be so called.

Q. What was your salary at that time?—A. Fifty dollars a month.

Q. Your duties have been changed from time to time?—A. Yes, sir; very materially.

Q. And your compensation has been changed?—A. Yes, sir.

Q. What is your present compensation?—A. One hundred and fifteen dollars a month.

Q. When was that last increase made?—A. I think it was July, 1889.

Pardon me, it was this year; it was the early part of this year. I had another increase in July, 1889.

By Senator SQUIRE:

Q. A previous increase?—A. Yes, sir.

Q. You say you had an increase in July, 1889, and another one this year?—A. It was the early part of this year. I think it was February. I had another increase after my appointment to \$60 and a further increase to \$80 under Professor Goode, who was Commissioner for a short while.

By the CHAIRMAN:

Q. How much do you get at the present time?—A. One hundred and fifteen dollars a month.

Q. Have your duties been increased and your responsibilities increased?—A. Yes, sir.

By Senator SQUIRE:

Q. In what respect?—A. I have charge of a large amount of correspondence and direct the office and field work of six or eight men.

Q. You direct the office and field work?—A. Under Captain Collins, of course.

By the CHAIRMAN:

Q. Are you related to Captain Collins in any way?—A. No, sir.

Q. Was your attention called to certain newspaper articles published within the last month which made criticisms upon the management of the office here?—A. I read some of them.

Q. It was charged there that Colonel McDonald had appointed to office a good many relatives of his or his wife's. Do you know of any others except McCormick and the two Lewises who have been appointed?—A. No, sir; I do not.

Q. You think they are the only persons who are connected with him?—A. I do not know that they are relatives.

Q. It was charged in those articles that the discipline at this station was very lax; that the employes did not come promptly at the proper hour, 9 o'clock, and that they were very apt to leave early if they chose to. What is your knowledge and observation on that point?—A. So far as the present office force with which I am concerned is taken into consideration, I will say that the men arrive promptly at 9 o'clock and do not leave before 4 o'clock without permission, and in case they do leave before the close of the office the time is deducted from their annual leave. Most frequently the men remain from twenty minutes to an hour after office hours.

Q. To complete the work of the day?—A. Yes, sir; and many of the clerks also take work home at night.

Q. Where they do that do they receive extra pay?—A. No, sir; it is purely voluntary. In the past there have been some cases where clerks have been somewhat lax in the matter of attendance, but as soon as the matter was brought to the attention of the Commissioner it was righted.

Q. You say "in the past." How far back do you date that?—A. In the present year there was one such case. A young man—if I may relate the circumstances.

The CHAIRMAN. Yes, sir.

The WITNESS. A young man who had been connected with the office

for about ten years and who was a very efficient clerk resigned to take another position. Prior to his resignation he had been going to this other place in the morning and frequently remaining all day without any permission to remain away from the Fish Commission. His application for leave with a month's pay was granted conditional upon the completion of certain work which he was engaged upon, and his notes were in short-hand and only he could decipher them. He failed to observe any regularity in his attendance and he left in a huff, and his leave with pay was not granted. He was absent during the month of January some five or six days, and during February some ten or twelve days.

Q. Was that in your department?—A. Yes, sir.

Q. He was not paid for the time he was absent?—A. I think not. There was another case of an efficient clerk who was intemperate in his habits and absented himself for a number of days, and he was suspended and given an opportunity to explain his movements, and he was then dismissed. Those are the only cases which I now recall.

Q. Is it your observation—of course you know more about your own special department, but generally you would have an opportunity of observing—do you think the employés as a rule are there promptly and remain until 4 o'clock?—A. I can only speak for my own office. I will say they are punctual in their attendance, and attend strictly to their duties.

By Senator SQUIRE:

Q. Was this the only case of the kind where there was a failure to perform the duties of the office of which you have personal knowledge?—A. Yes, sir; that about covers it.

Q. Did you ever know of any other person or persons who arrived late in the morning and went away during business hours, or went away early in the afternoon?—A. There was a clerk who was in the office for a short while doing work for another division; simply given a place in my office. It was a lady, and she was somewhat irregular, but I am inclined to believe the irregularity was due to sickness. She was something of an invalid, and sometimes came late in the morning and had to be excused in the afternoon on account of sickness.

Q. Was she a regular employé of the office?—A. Yes, sir.

Q. Would your information in regard to this matter extend beyond your own immediate office? Would you know if these habits prevailed among other employés outside of your own office?—A. I think I would; yes, sir. These remarks apply only to office work. In the field, of course, the men have more or less freedom of movement. Then I have every reason to believe they are even more punctual than in the office. I have been in the field myself, and had other men with me, and during three or four months in the year we have averaged twelve to sixteen hours daily work.

By the CHAIRMAN:

Q. You say "in the field." Explain just what you mean. Do you mean on the ocean or on land?—A. Anywhere outside of Washington.

Q. Is that on land or on water when you speak of being in the field?—A. On the shore. We travel on the shore of the ocean, lakes, and rivers, and personally visit the fishing points.

Q. To collect your statistics from them?—A. Yes, sir.

Q. Do you know of anything further in regard to this matter?—A. No, sir; I can think of nothing further.

By Senator SQUIRE :

Q. Do you know anything about the Government having paid for materials for fishway models and filters which were being devised and invented by Commissioner McDonald?—A. I do not know anything about that.

Q. Do you know anything about Mr. Collins being engaged during Government time and at Government expense in getting up petitions to secure the confirmation of Mr. McDonald as Commissioner?—A. No, sir; I was not with Captain Collins then.

Q. You would have no opportunity to know of it, then?—A. No, sir. If I may be allowed, it might be proper for me to state that I myself occasionally come a little late in the morning, from five to twenty minutes after 9. During all the time I have been connected with the Commission, but more especially during the past year, I have been accustomed to take work home at night, and I think I average as much as ten or twelve hours per week extra work. That is purely voluntary and grows out of an interest in the work. I feel privileged to sometimes come late in the morning if I choose.

By the CHAIRMAN :

Q. You think that is fully compensated by the extra work at home?—A. Yes, sir.

TESTIMONY OF A. STEHMANN HERR.

A. STEHMANN HERR, being duly sworn and examined, testified as follows:

By the CHAIRMAN :

Q. Do you live in Washington?—A. I do now. I came here on the 1st of January.

Q. Are you in the service of the Fish Commission?—A. No, sir; I am not now.

Q. Have you been?—A. I was for seventeen days.

Q. For seventeen days?—A. Yes, sir.

Q. What position did you fill?—A. I was assistant night-watchman.

Q. When did you enter the service?—A. On the 25th of May.

Q. This year?—A. Yes, sir; 1890.

Q. And left it when?—A. The 12th of June following.

By Senator SQUIRE :

Q. From what State were you appointed?—A. I am from Pennsylvania.

Q. Who appointed you?—A. Mr. Worth.

Q. Have you been working with Mr. Worth?—A. Yes, sir.

Q. Down at this station?—A. Yes, sir; at the Central Station.

Q. That is where you were night-watchman?—A. Yes, sir; at the Central Station.

Q. Where is the Central Station located?—A. Down here at Sixth and B streets, in the old Armory building.

By the CHAIRMAN :

Q. Your employment was at the Central Station?—A. Yes, sir.

By Senator SQUIRE :

Q. You were under Mr. Worth?—A. Yes, sir; he is superintendent of the Central Station, and also of the hatching station down at Fort Washington.

By the CHAIRMAN :

Q. Why did you leave the employment of the Commission?—A. I was engaged only for the hatching season to assist the night-watchman. The duties of the night-watchman during that time are to watch the eggs, and of course at the same time you have to go all over the building and see that everything is all right, and Mr. Worth thought it was necessary to have assistance.

Q. Just for a short time?—A. Yes, sir; just during the hatching season.

Q. What was your compensation?—A. Forty-five dollars a month.

Q. That is the only time you have been in the service of the Commission?—A. Yes, sir. For the whole time I was there I received \$24.92.

Q. Did you ever see Mr. Worth under the influence of liquor or look like he had been drinking?—A. I never did.

By Senator SQUIRE :

Q. You never have seen him under the influence of liquor?—A. No, sir.

Q. Did you ever see any whisky or liquor about there on the premises?—A. No, sir; I did not.

By the CHAIRMAN :

Q. Do you know whether there are any employés in the service of the Fish Commission, appointed by Commissioner McDonald, who are relatives of his?—A. I do not know any more than what I have seen in the papers. I really never knew Commissioner McDonald or any of them, only by hearing of them from people in the employ of the Fish Commission.

By Senator SQUIRE :

Q. What time did you go on duty?—A. At 11 p. m.

Q. And went off when?—A. At 7 a. m.

Q. Were there any others employed the same time you were there?—A. No, sir.

Q. You were the only person on the premises?—A. The regular night watchman, and occasionally some of the transportation cars would come in. They went in and out at nights.

Q. Has any one talked with you about anything you knew in regard to the subject-matter of this investigation?—A. No, sir. Do you mean——

Q. Have you talked with any person, any newspaper man?—A. Not with any newspaper man; no, sir.

Q. Or has any one interrogated you as to what you knew with regard to this matter?

The WITNESS. As to the inside workings of the Commission?

Senator SQUIRE. Yes, sir.

The WITNESS. No, sir; I have been quite fortunate in that way. I would not have anything to report.

Q. We want to find out why you were subpoenaed. Have you any statement to make relative to the subject of this investigation in regard to the administration of the Fish Commission?—A. No, sir; I have not.

Q. If you have no information to present to the committee, and do not know why you are here, I do not know what we can ask you?—A. No, sir. I came up here to see why I was subpoenaed.

Q. Where are you living now?—A. Twelve hundred and sixteen O street southwest.

Q. You are going to be here right along?—A. Yes, sir.

TESTIMONY OF JOHN PAUL WILSON.

JOHN PAUL WILSON, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Your residence is in Washington?—A. It has been until the last two months; now I live in Springfield, Md.

Q. Are you in the employment of the Fish Commission?—A. I am.

Q. When were you appointed?—A. In the latter part of 1874.

Q. By whom?—A. Professor Baird.

Q. Have you been in the employ of the Commission ever since?—A. Yes, sir; continuously.

Q. In what capacity?—A. I went in as Professor Baird's stenographer, and then as the work of the Fish Commission increased I had vast duties assigned to me. At present I am in charge of the property, and am the property officer of the Commission and superintendent of the general offices of the Commission, and then I do translating of several languages.

Q. The Commission conducts correspondence with foreign fish people?—A. Yes, sir; France, Mexico, Germany, etc.

Q. What was your salary when you were first appointed?—A. Twelve hundred dollars a year.

Q. When was it increased, if it has been increased?—A. I could not say exactly. Probably after I had been there three years it was increased to \$1,440, and perhaps three or four years afterwards to \$1,600, and then about the same time \$1,800, and finally \$2,000.

Q. When was it increased to \$2,000?—A. About four years ago.

By Senator SQUIRE.

Q. Before the present Commissioner came into office?—A. Yes, sir.

By the CHAIRMAN:

Q. Your present salary is \$2,000?—A. Yes, sir.

Q. Has your attention been called to various publications, principally in the New York Press, criticising the management of the Commission?—A. Yes, sir; I have seen about half the articles that have appeared.

Q. In those articles it was charged that there was favoritism there, and that the Commissioner had appointed more or less persons who were relatives or connections of his own.—A. Yes, sir.

Q. Have you any knowledge in regard to that matter?—A. I have seen such statements, and then I have heard them denied. I could not say whether any one of those persons is related to him or not, from my own knowledge. I have heard people say they were, and have heard people say they were not. I know nothing, personally.

Q. Do you know Mr. McCormick?—A. No, sir. There is such a person, but I do not know him.

Q. Do you know Mr. Lewis?—A. Yes, sir.

Q. He is said to be a relative?—A. Yes, sir; of Mr. McDonald's wife.

Q. Is Mr. Lewis, in your opinion, a competent and efficient person?—A. I do not know anything about him. I have nothing to do with him. He is under a different branch of the work than mine.

Q. It is charged in those articles that the employés at the Central Station here are not very particular about observing hours; that they

are very apt to come late and go early, and that the discipline of the office is pretty lax. What can you say on that point?—A. I do not think it is true. I think the discipline is better than it was under Professor Baird. I think Colonel McDonald is quicker in enforcing discipline than Professor Baird was.

Q. As matters come under your observation, do you think the employés are there as a rule promptly on time?—A. I do, indeed. I do not think there is any just criticism to be made there. I am sure that all the subordinates have to ask permission before they go out, and have to report when they come back. As far as I know, none of them would go out without asking permission.

Q. One of the principal charges was that the Commissioner exercised more or less favoritism; that he had his favorites and those he did not like, as well, and that the salaries of his favorites were apt to be advanced and their duties not made very heavy, and so on. Can you give us any information on that point?—A. I presume in every department there are favorites, but I have no reason to suppose that his favorites were not appointed on their merits. I have no reason to think they were not.

Q. Do you know of any employé at this office who is retained in position who is not a good and faithful person in his position?—A. I can not think of anybody; no, sir.

Q. You have charge of the property, you say?—A. Yes, sir; that is, of the property throughout the country. We have a great deal of very valuable property on the vessels and at the various stations.

Q. Your jurisdiction extends to the property throughout the whole country?—A. Yes, sir.

Q. In the exercise of your duties, do you visit these various stations?—A. I do not as a rule; no, sir.

Q. You have reports?—A. Yes, sir; I have a quarterly report. Then I compare them with my records, and if they are not satisfactory I return them for correction until they are satisfactory.

Q. Have you ever been at Put-in-Bay Station since they built that station?—A. No, sir.

Q. Have you ever been at Leadville since they built that station?—A. No, sir.

By Senator SQUIRE:

Q. Do you know anything about Great Falls?—A. There is a fish-way there.

Q. Do you know anything about the operation of that?—A. No, sir; I remember when that fish-way was put up there; it was carried away.

Q. It was carried away?—A. I think some sections were carried away.

By the CHAIRMAN:

Q. We were directed to make this inquiry covering the general administration of the office here as to its business methods and as to any favoritism or any maladministration of the office. Now, I will ask you if you can give us, in your own way, any information on any of those points to do so. I will put it in this way: If there are any methods pursued which are not business-like and are subject to criticism you may state it to the committee.—A. I do not think I can make any criticisms. Colonel McDonald had a great deal of experience in this work before he was appointed, and some people thought he was too enthusiastic in his work; but I think all those expectations have been disappointed. I

think he is thoroughly business-like in all the work of the office. I do not think there is any just criticism to be made.

Q. Regular business-like way?—A. Yes, sir.

By Senator SQUIRE:

Q. You say you do not know anything about the Great Falls matter?—A. No, sir.

Q. Do you know of any of the men being employed at Government expense upon models of fish-ways or upon filters or anything of that kind?—A. I saw such statements in the papers, but I do not know that they are true.

Q. You know nothing about it?—A. No, sir; I have nothing to do with the Central Station.

By the CHAIRMAN:

Q. Is your office there?—A. Yes, sir; upstairs. I know Colonel McDonald has his enemies. I know, for instance, Mr. Smiley has always been a grumbler. He was just as critical with Professor Baird's actions and also as to Professor Goode's actions.

By Senator SQUIRE:

Q. The purport of what you say would be favorable to the present Commissioner and nothing critical?—A. Yes, sir.

Q. And in favor of his administration?—A. Yes, sir.

Q. You have no criticisms to make?—A. No, sir.

At 3 o'clock and 30 minutes p. m., the subcommittee adjourned until to-morrow at 10 o'clock a. m.

WASHINGTON, D. C., *July 9. 1890,*

The subcommittee met at 10 o'clock a. m. pursuant to adjournment.
Present: Senators Stockbridge (Chairman) and Squire.

TESTIMONY OF RICHARD RATHBUN.

RICHARD RATHBUN, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. Richard Rathbun.

Q. Where do you reside?—A. For the last ten years I have made Washington my residence.

Q. Are you in the service of the U. S. Fish Commission?—A. I am.

Q. In what capacity?—A. As assistant in charge of scientific inquiry.

Q. When were you appointed to that position?

The WITNESS. To that particular position?

The CHAIRMAN. When were you appointed in the service of the Commission?

A. During 1874 and 1875 I was a member of the sea-coast investigating party under Professor Baird as a volunteer.

Q. What position did you subsequently occupy?

The WITNESS. After that?

The CHAIRMAN. Yes.

A. In 1875 I went to South America as geologist on the geological survey of Brazil.

Q. Not in connection with the Fish Commission?—A. No, sir. I went there, and then returned in the spring of 1878, and immediately joined the Fish Commission again as a paid assistant.

Q. When were you appointed to your present position?—A. My present position as assistant in charge of scientific inquiry, in November, 1887.

Q. By Professor Baird?—A. By Professor Goode, who was then Commissioner.

Q. And you retain that position still?—A. I retain that position still.

Q. What is your salary, professor?—A. My salary at present is \$2,700 a year.

Q. What was it at the time of your appointment by Professor Goode?—A. My salary then was \$2,000 a year. Prior to my appointment it was \$2,000 a year. On my appointment by Professor Goode it was increased to \$2,200 a year.

Q. Have your duties increased since you were appointed by Professor Goode?—A. Yes, sir. I will state this, that the office was created by Professor Goode as a necessity of the Commission. It had not existed before. The duties of the office have rapidly increased since then.

I should further state, however, in explanation of the matter, that in the organization of the Commission, as made by Professor Goode, three divisions were recognized: scientific inquiry, the methods and statistics of fisheries, and fish-culture. Mr. Goode placed a man at the head of each of these divisions, being men who had previously been in the Commission. Fish-culture was regarded as the more responsible position. It was then practically the middle of the fiscal year, and Colonel McDonald, now Commissioner, was appointed by Mr. Goode in charge of fish-culture. Holding the more responsible position, he was paid the larger salary, the salary being increased at that time to \$2,700 a year. The appropriation, not being the beginning of the fiscal year, did not permit of placing the others on the same par, therefore he made the salaries as high as he felt justified, in accordance with the appropriation he had to spend, with the idea that they should be increased at the beginning of the next fiscal year.

Q. Your salary was increased by Mr. McDonald?—A. My salary was increased by Colonel McDonald on July 1 following. July 1, 1888, it was increased to \$2,500 a year.

Q. And when was it increased to \$2,700?—A. The last increase was the 1st of September, 1889.

I should like to state right here, further, that those increases I did not ask for. They came to me without request.

Q. Prior to the increase to \$2,700, had the duties also increased?—A. The duties have increased to the present time, and they are getting more and more onerous all the time.

Q. How many employes have you in your department?—A. If you will allow me to explain: The division of scientific inquiry, of which I am in charge, includes the expenditure of the appropriation of \$15,000 for scientific inquiry by Congress, the operations of the steamer *Albatross*, and the operations of the steamer *Fish-Hawk* and the schooner *Grampus*, when assigned to that work. The *Albatross* is always engaged in that work.

Q. Just state in brief what that service is. What does the *Albatross* do?—A. The purpose of the *Albatross* is to investigate the fishing grounds along the sea-coast. Practically her duties are in connection with what are called the off-shore fishing grounds; that is, in contradis-

tion to those close along shore. She determines the location of the fishing grounds, their characteristics and their resources, the kinds of fish which occur upon them, their abundance, their suitability for market, the distance of the fishing grounds from the market, the permanency of the grounds, and all matters of that sort. Until the fall of 1887 the *Albatross* was on the Atlantic coast. In November of that year she sailed for the Pacific coast, arriving there on the 14th of May, 1888. Since then she has been engaged on the Pacific coast between San Diego and Behring Sea. The *Fish Hawk* has the same character of work when assigned to scientific inquiry, but close along shore.

Q. Along the Atlantic shore?—A. Yes, sir. Her duties are confined to the Atlantic coast, being related principally during the past two years to the oyster grounds of southern New England.

The *Grampus* has been engaged in similar work, such as a careful examination of the red snapper and grouper grounds of the Gulf of Mexico off the coast of Florida, and of the mackerel region of the New England coast. Well, I will simply state there, that the conduct of that work comes under my direction.

Besides that we have all investigations carried on by the appropriation specifically made for scientific inquiry. That includes the operation of the Wood's Holl laboratory and the Washington laboratory; all the investigations of interior waters; that is to say, the lakes and rivers in the interior of the country, including Alaska; temperature investigations, etc.

That is all the work properly belonging to the scientific inquiry respecting food fishes and fishing grounds.

Q. I should like to ask right there, has the clerical force in your office been increased from time to time?—A. The office, as I said, was created in November, 1887. Previous to that there were, of course, no clerks. There are now three in the office, two of whom were new appointments, and one a transfer from another branch of the Commission. Their work relates to the administration of the affairs of the division.

In addition to that we have one person in the laboratory who has general care of the collections and of the assorting and sending out of specimens for specialists for study.

The ichthyologist, in so far as his duties at present relate to scientific inquiry, is connected with the laboratory. However, he has been acting as editor for about a year.

Then we have in the investigation of interior waters entirely a volunteer force, whose expenses are paid when in the field. That work has been carried on, outside of Alaska, almost entirely under the direction of Dr. David S. Jordan, president of the University of Indiana.

It is well to explain here, perhaps, that a nominal salary of \$25 a month was paid these men last year to cover wear and tear of clothing and little incidental expenses which could not be covered by vouchers.

Q. They are paid no other compensation?—A. No, sir; they are volunteers.

Q. Has the increase of force in the office been made necessary by the increased work which has been carried on by your branch of the service?—A. The increased work has necessitated the organization of the office and the employment of that help, which amounts to three clerks, receiving salaries of fifty to a hundred dollars a month.

Q. Are they only reasonably busy?—A. They are kept exceedingly busy, without one moment to spare at any time of the day.

Q. Let me ask you here, because it has been charged otherwise, do the employés in your office report promptly at 9 o'clock, and do they

remain until 4?—A. Yes, sir; until 4 o'clock. They are prompt in their attendance, and never leave without express permission at any time through the day. The cases of their leaving perhaps an hour or a half hour a day before the end of the day would not be more than two or three times in the year, and by express permission.

Q. It has been charged that under the present Commissioner there have been appointments of a good many relatives or connections of his, or of his family, in one branch or another of the service. Do you know anything about that?—A. I probably know all there is. I know of one appointee, Mr. Frank McCormick, who is a nephew of Mrs. McDonald. I understand that the two Lewises, who have been spoken of, are connections in some way by marriage; how near I do not know.

Q. Do you know anything about their capabilities and efficiency as employes?—A. I know personally Frank McCormick and R. E. Lewis. I consider them both excellent men, hard-working and efficient.

Q. I want to ask you right there, to complete this, do you know anything about the regularity of their attendance, whether they are subject to the same rules as others?—A. They are. As to Frank McCormick, he is in my office. I wish to make this further explanation, that so far as his appointment is concerned, I am responsible for it. I regret it on his account, for the disturbance it seems to have created, but on my account I do not, because I consider him, for his experience, one of the best clerks I ever had in my office. He is a young man who received his first training in type-writing in a lawyer's office, and was taken by me for the same class of work.

Q. He testified as to that. I simply want to ascertain whether he is a good clerk?—A. He is one of the best clerks I have ever had in my office.

Q. It has been charged that the present Commissioner has his favorites to quite an extent, and that they are favored by receiving promotions and by being accorded more liberty than others. Can you say anything on that point?—A. I can speak more plainly with regard to myself than any one else. I will make the general statement that I do not believe that to be the case. As to myself, I was not in favor of Colonel McDonald's appointment as Commissioner, and he knew it at the time. I took no steps, of course, against him, because I did not consider it judicious for one in the office to be mixed up on such matters. My resignation was placed in his hands immediately after his appointment, and because of my preference for purely scientific work that resignation has been handed in since then two or three separate times, and I remain on the Commission simply at his urgent request. I am not dependent upon the Commission for my living. There has been no favoritism with reference to myself. I consider that I have given equivalent for my compensation, and that I am retained simply because I have performed my duty satisfactorily to him, a matter, however, of which he is the better judge.

I said I was opposed to his appointment. I wish to say that I consider him, although opposed to his appointment in the beginning—I wish to say, from my past experience under his direction, that I consider that no mistake was made in appointing him. I think it is only just that I should add that.

Q. Do you know anything about the management of the fish station at Fort Washington?—A. I have no connection with that at all. I have visited the station three times in my life, the first time a number of years ago, not in connection with the Fish Commission, and the last

year once, and this year once during the hatching season with the Commissioner, spending only a few hours there each time.

Q. Do you know anything about the habits of the officer who has been in charge there, Mr. Worth?—A. I know Mr. Worth only in the office in Washington.

Q. Have you ever seen him intoxicated or under the influence of liquor?—A. On the contrary, I have always considered him a man of exemplary character, free from faults, and I can frankly say that such has been the case whenever I have seen him.

Q. Do you know anything about the use made of the money received from the sale of fish at that station?—A. No, sir. I have understood that the fish were sold and the money applied to pay for the running of the seine. But that to me is only hearsay. I have no knowledge on the subject.

Q. Has your attention been called to various newspaper articles published within the last month or so reflecting upon the Commissioner's management of the affairs of the Commission?—A. I have seen several articles.

Q. What is your opinion, from your knowledge in connection with the Commission, as to the business methods of this office; are they conducted in a business-like, systematic manner, or otherwise?—A. I consider that they are conducted in a more systematic and business-like manner than any Government office I have ever been connected with.

Q. In your branch of the service, do you have occasion to expend money, to make purchases?—A. I do, sir.

Q. How do you manage that; are the payments made upon vouchers which are approved by yourself?—A. Every voucher for expenditure from the appropriation for which I am held responsible by the Commissioner is approved by me.

Q. Do you consider that all those expenditures are made in an economical and business manner?—A. I certify to that on the voucher, and of course I hold myself.

Q. You spoke of disbursing a certain appropriation.—A. I do not disburse.

Q. You direct the expenditure?—A. Yes, sir. The appropriation of \$15,000 allotted to my division is expended upon vouchers which are certified to by me. However, expenditures are never made from this appropriation, excepting on requisitions, which are certified to by the disbursing agent and approved by the Commissioner. I have no authority to make any expenditure whatsoever, except upon a requisition signed by the Commissioner, no matter how small the expenditure may be.

Q. Have you ever been at the Leadville Station?—A. No, sir.

Q. Have you ever been at the Lake Erie, the Put-in Bay Station?—A. No, sir.

Q. Do you know Mr. Gay, who is in charge of stations?—A. I have known Mr. Gay since he has been in Washington.

Q. Do you consider him a competent person to have charge of these stations?—A. I have had no connection with him in any work or branch of the inquiry, but I have personally considered him fully competent, and would think that his former experience would fit him especially for that kind of work.

Q. What position did he hold previously?—A. He was president of the State fish commission of Pennsylvania, and on that having direct charge of the propagating work. He was their active man.

Q. So that his previous education in that direction fitted him, you would think, for the position he holds?—A. Precisely so.

Q. If you can state anything touching the points involved in the resolution which you have not already stated, you will please do so.—

A. I will say simply with reference to reported changes in the force, that within my knowledge such changes have never been made, excepting in the interest of the work of the Commission and not from any influence brought to bear against the persons who have left the Commission. In fact, so far as I know, nearly every person who has left the Commission since Colonel McDonald has been in charge has done so by his own free will, resigning for reasons best known to himself.

Q. Has the general increase in the business of the Commission made it necessary to increase the total number of employés, in your judgment?—A. Decidedly so, in all the three divisions of the Commission and more particularly in propagation, where the new stations render a larger force necessary, but it is the same in the division of scientific inquiry, where the work being carried on to-day is producing actual results far ahead of what was accomplished before the present administration.

Q. So far as your knowledge extends, how do the salaries paid the Fish Commission compare with the salaries paid in other branches of Government service for the same character of work?—A. I have never made a comparison of the salaries of clerks, but I think as a whole that the rate of compensation in the Fish Commission is low compared with the other departments. So far as the lower grades are concerned below the classified service, it is exceedingly low. So far as the professional assistance is concerned, it is very low.

Q. You could hardly make a comparison?—A. Hardly; but corresponding positions in the other scientific bureaus of the Government service are generally accompanied by much higher salaries, and college positions throughout the country generally pay higher salaries.

Now I think that I have answered your questions so far as they are covered by this resolution, although I am quite ready to go further.

Q. Now, it is charged that the administration of the office, as I said before, is loose and not business-like, etc. You have stated generally that you thought the contrary was the case?—A. Yes, sir.

Q. Now if there is anything which you think fairly comes within the scope of our inquiry, which you have not stated, please state it in your own language?—A. I do not think I have anything more to say. Of course, my observation is limited, practically, to my own division; I consider that that is being run on purely business principles and has been ever since it was organized.

Q. Let me ask you this question: You said that at the time of Colonel McDonald's appointment you did not favor his appointment. If that matter would come up now would you or would you not favor his appointment?—A. I practically answered that question afterwards in the same connection, to the effect that I certainly would favor his appointment, and that I considered him the best fitted man in the country, so far as my experience goes, for the place of Fish Commissioner.

Q. Let me ask you whether, in the appointment of any employés political considerations have been brought in?—A. I do not think they have at all. I know the politics of very few members of the Fish Commission.

Q. It is not a political machine?—A. It is not a political machine. I do not doubt that persons have been recommended by members of

Congress for positions there, which they have received, but if such is the case their appointment is based upon their fitness for the place and not on political grounds.

TESTIMONY OF CHARLES E. GORHAM, Recalled.

CHARLES E. GORHAM, being recalled, testified as follows:

By the CHAIRMAN:

Q. You were sworn yesterday?—A. Yes, sir.

Q. What are your duties in connection with the Fish Commission?—

A. Architect, civil engineer, and draughtsman.

Q. How long have you been employed in the Commission?—A. Seven years permanently, and have been at times from 1876.

Q. Did you draw the plans for the Colorado hatchery?—A. Yes, sir.

Q. What was the agreement, if any, concerning payment for the same?—A. I had no definite agreement regarding the payment for them. I was to make the charge at the completion.

Q. Were you then in the employ of the Commission?—A. I was employed per diem by the Commission, and I was to make these plans for the Commission and charge a price for them. I was working at that time on plans for the fisheries at the Great Falls, on the Potomac River. But as to the plans of this building the Commissioner asked me to make them.

Q. Not under your per diem?—A. No, sir; to sell them to the Government at a price.

By Senator SQUIRE:

Q. What wages did you get for that?—A. I was working for the Engineer Department then. Six dollars a day for making plans for the Great Falls fisheries.

Q. You got \$6 per diem and got paid for the plans besides?—A. I was not to do the work during office hours.

Q. I did not mean that you were working on them during office hours. I mean whether you did them in office hours or out of office hours?—A. I did them during my own time, and not while I was paid for the other work.

By the CHAIRMAN:

Q. What was the agreement, if any, concerning definite payment for the same?—A. There was no agreement.

Q. Did you put in a bill; if so, for what amount?—A. Two hundred dollars.

Q. What did you receive?—A. One hundred and seventy-five dollars.

Q. Why did you not receive full pay for your bill?—A. They objected to it as being too large.

Q. Did Mr. John Gay set the price upon your work?—A. I understand that he said the price was too large; that \$200 was too much for the work.

Q. You do not know whether he really fixed the price or not?—A. I do not; I know the bill came back from him disapproved.

Q. By what right did he sit in judgment on your architectural plans?—A. I can not tell you that.

Q. Do you consider Mr. Gay a competent judge of such work?—A. I should not think he was. He is not an architect.

Q. Do you consider any one not an architect a fit person to be placed in judgment as to the fairness of your bill?—A. No, sir; not unless he was a builder of large experience who had been familiar with that class of work.

Q. Is there not a certain percentage of the cost of building that custom or law allows an architect to charge; if so, what is it?—A. Two and a half per cent. of the cost of the building and plans, and $2\frac{1}{2}$ per cent. in addition where he superintends.

Q. Were you paid that percentage of the cost of this building?—A. No, sir.

Q. Have you drawn plans for other buildings?—A. Yes, sir.

Q. Name them.—A. Plans for the building at Duluth, Wytheville; plans at Washington, Havre de Grace, Md.; Gloucester, N. J.; Wood's Holl, Gloucester, Mass.; Fort Washington Station.

Q. Has Mr. Gay ever questioned the fairness of price or salary drawn in the completion of the same?—A. He had nothing to do with those plans. They were prepared outside of his knowledge, and most of them before he came into the Commission.

Q. Did you not take the money paid you for the plans of the Colorado Station under protest?—A. Oh, no; I accepted the amount and gave a receipted bill.

Q. Did you ever receive the full amount of your bill?—A. No, sir; the full amount would have been about \$300 or a little over, according to the architect's scale.

Q. Your bill was \$200?—A. Yes, sir. I put in a reasonable bill.

Q. And you received \$175.—A. Yes, sir.

Q. Do you consider the lowering of the Put-in Bay hatchery 1 foot to be beneficial to the extent of money expended, thirteen hundred and odd dollars?—A. I can not state. I have never been out there and know nothing about the location.

Q. You prepared the plans of the building?—A. No, sir; I did not prepare those plans and am not able to state anything about that.

Q. Do you consider Mr. Gay's knowledge of architecture foots the expenditure of the above sum; that is, the cost of the lowering of the Put-in Bay Station?—A. I know nothing about that.

Q. Have you ever made any plans or drawings of fishways other than those of the Great Falls fishways in Government time?—A. I have made other plans for fishways.

Q. Besides those?—A. Yes, sir.

By Senator SQUIRE:

Q. Which have been accepted by the bureau?—A. Yes, sir; they were made for the use of the Fish Commission and of the War Department, the engineer branch of the War Department.

By the CHAIRMAN:

Q. What fishways?—A. The improvements of the Green and Barron Rivers, of Connecticut. I made those.

Q. Did you ever make plans or alterations in plans for the McDonald patent water-filter in Government hours?—A. When the colonel—that is before he was Commissioner three years ago—first invented this idea for a filter, at that time I did some work on the plans in bringing out his ideas.

Q. In Government hours?—A. Yes, sir; but the filters at that time I understood were to be used entirely for the benefit of the Fish Commission. That is why I was called upon to do the work.

By Senator SQUIRE:

Q. Just repeat the last remark.—A. The filters which were made were used for the service of the Fish Commission. They were made to be used at different stations of the Fish Commission.

Q. Was that original work that you did for any particular fish station or any particular place?—A. To be used at the Central Station and at Wood's Holl.

Q. What was the nature of this work that you did?—A. The Commissioner had the crude ideas for his invention and he asked me to work them out in proper shape for manufacture, and I made plans for the filters.

Q. You made plans for these filters?—A. Yes, sir.

Q. From his crude ideas?—A. Yes, sir; from his rough pencil sketches. I did only the mechanical part of the work.

Q. Was that invention so worked out by you patented afterwards by the Commissioner?—A. It was patented about that time. The original patents were gotten out about that time.

Q. You say you worked out these crude ideas from these rough pencil drawings antecedent to and as part of the business of getting the patents?—A. I knew nothing about having any patent attached to it at that time. I know now it was patented about that time.

Q. That work was done during Government hours, during the time you were paid \$6 per day?—A. Yes, sir; I was working then under Professor Baird's directions. He told me to—

Q. What year was this in?—A. In 1887, I think.

By the CHAIRMAN:

Q. Did you do this work under Professor Baird's directions?—A. Professor Baird told me in a general way to give Colonel McDonald all the assistance I could in any of his work.

By Senator SQUIRE:

Q. Were your special directions received from Professor Baird or Mr. McDonald?—A. From Mr. McDonald.

By the CHAIRMAN:

Q. Professor Baird requested you to assist Mr. McDonald in working up his invention?—A. Yes, sir; I reported to him nearly every day, and he knew what I was doing.

By Senator SQUIRE:

Q. To what extent have these filters been used by the Fish Commission?—A. Ever since.

Q. How many instances?—A. At the Central Station, Washington.

Q. Any other place?—A. Not to my knowledge.

Q. You would know if they had been used elsewhere?—A. I have not been at stations enough lately to know.

Q. Have you been in the habit of knowing what filters, if any, were used at the other stations; have you been in the habit in your business of preparing plans, knowing what the preparations were?—A. Yes, sir.

Q. Have you known what filters were used or whether there were any used or not?—A. In a general way I have.

Q. You do not know of any other place where the filters have been used except the Central Station here at Washington?—A. No, sir.

By the CHAIRMAN:

Q. Do you know what improvements and changes have been made

from the original plans?—A. Yes, sir; great changes in the construction of the filter, but keeping the same idea.

By Senator SQUIRE:

Q. Have you done all the work in reference to those?—A. Yes, sir.

Q. No other person has been working on those plans but you?—A. No, sir; not that I know of. Early last fall the Commissioner told me he wished me to go ahead and to get this filter into better shape. It was then rather large and unweildy. He thought it would have a commercial value as an invention for general use.

Q. Outside of Fish Commission purposes?—A. Yes, sir. He told me whatever work I did was to be done at my home. I was to keep an account of it, and render a bill after I had finished the work for him.

Q. Did you do that?—A. I am working on it still at intervals.

Q. Have you rendered any bill?—A. No, sir; I have never done so, because he told me then that if he got anybody to take hold of it—business men—that they would settle all such bills, and he had other bills.

Q. Have you done much work of that kind?—A. I suppose I have done about \$50 worth, probably.

By the CHAIRMAN:

Q. Outside of your regular time?—A. Yes, sir.

By Senator SQUIRE:

Q. Since he talked with you at that time have you done any work on it at all during Government hours?—A. No, sir.

Q. The time he had this talk with you was last fall?—A. Yes, sir; I think in October, 1889.

Q. What proportion of the work done by you has been done since that in perfecting this filter?—A. The greater portion of it.

Q. Has there been any patent taken out since you began to work at this business?—A. He has applied for other additional patents.

Q. Since that time?—A. Yes, sir, lately, and I made drawings to be used in getting out the patent.

Q. You did that out of office hours?—A. Yes, sir, entirely, and I know that the Commissioner has paid for having his models made himself, and for all the material he has used.

Q. How do you know that?—A. I have been informed so by him and by the man who got the castings made.

Q. Who was he?—A. Francis Barry, machinist, and the colonel told me that he was at the expense of getting the wooden models made before having the castings made.

Q. Where were they made?—A. In Washington.

Q. Do you know where and by whom?—A. No, sir; but I can very easily find out. The filtering tiles were made in Baltimore, at a pottery there.

Q. Do you know whether any of the expense connected with the preparation of these models was borne by the Fish Commission?—A. The only expense the Government has been put to is in assembling them there in the building and putting them together. The machinist was detailed by the Fish Commission to put them up. I think there are two or three filters now used by the Fish Commission. The thing has not taken any commercial shape yet. There has been none sold.

Q. Do you regard the invention as being a good one?—A. Yes, sir; I think it is a very good one. I think in the present shape it is a very good invention.

Q. What sort of shape was it in originally when you first made it?—

A. It was cumbersome and expensive.

Q. Have there been any radically new changes since then?—A. In the form of construction.

Q. But in the idea?—A. The idea is the same. It was to establish the filtering medium which was very common in earthen tiles. But his invention consists in cleaning those tiles by the friction of sand rubbing up and down on the surface. In place of having to clean the filter every day or so, this would act automatically until the tile was run out.

Q. That was the original idea?—A. Yes, sir; and it is the same to-day, only a change of shape and mechanical construction.

Q. Do you, or not, regard this invention as being of great value?—A. I think it is a valuable invention if it is put into the hands of good business men to put it on the market.

Q. For general purposes, for purifying water for drinking?—A. Yes, sir; or for domestic uses.

Q. How as to its value in connection with the Fish Commission?—A. We use it there in filtering the water for drinking and for use in the aquaria.

Q. Is it essential that filters be used in propagating fish?—A. I am not a fish culturist; I can not tell you that.

I will say one word here. The Commissioner was requested by the War Department to furnish these plans for those fishways, to be used in connection with their construction there.

Q. Requested by the Secretary of War?—A. Yes, sir; to furnish plans for these fishways. The dams were about to be put up for the improvement of navigation which would obstruct the passage of the fish, and most of the States require fishways to be put in all dams.

Q. You say the War Department requested it?—A. Yes, sir; I understood so.

TESTIMONY OF THOMAS W. SMILLIE.

THOMAS W. SMILLIE, being duly sworn and examined, testified as follows:

By Senator SQUIRE:

Q. Please state your name and place of residence.—A. Thomas W. Smillie, 618 G street southwest.

Q. Washington, D. C.?—A. Yes, sir.

Q. What is your business?—A. Photographer.

Q. In connection with what department or bureau of the Government?—A. The National Museum.

Q. What relation have you to the business of the Fish Commission?—A. That is a little difficult for me to say. I am the photographer of the National Museum, and the Fish Commission employs a laborer who works in my department doing the work of the Fish Commission under my supervision. He does a small amount of work for the Museum in return for the time that I devote to the Fish Commission work. This is an arrangement—

Q. How long has this arrangement been going on?—A. Since Commissioner Baird was Commissioner of fish.

Q. About what year?—A. Since 1882, I think.

Q. Since 1882 this arrangement has been going on?—A. Yes, sir. In 1882 I was an employé of the Fish Commission. I was paid by the Fish Commission.

Q. When did your connection with the Fish Commission cease? I mean the time that you were in the employ of the Fish Commission directly?—A. I can not state the time exactly. It was about the time Professor Goode gave up the Commissionership.

Q. Can you state approximately?—A. I think it must be about four years.

Q. About four years ago your direct connection with the Fish Commission ceased?—A. Yes, sir.

Q. Now please state what has been done by you or under your direction in behalf of the Fish Commission in your work as a photographer?—A. Mostly copies of plans. I think almost exclusively copies of plans of Fish Commission stations and buildings, etc., and such things as that.

Q. Have you ever presented any bill for your work as such photographer?—A. No, sir.

Q. Do you know of any bill having been presented for photographic work?—A. No, I do not know of any. I know there has been some work done outside. I assume it was private work that was done by professional photographers outside.

Q. For the Fish Commission?—A. For people connected with the Fish Commission. They were photographs of scenery, picturesque views taken of the Fish Commission vessels. Those things I suppose were printed by photographers outside.

Q. Do you know whether the cost or expense of these photographs of scenery, etc., was charged to the Government or not?—A. I think not.

Q. To whom do you think it was charged?—A. I know in a number of cases parties paid for them out of their own pockets; parties who were employed by the Commission.

Q. What cases do you recall?—A. In the case of Mr. Townsend and Dr. Bean.

Q. Here in this city?—A. Yes, sir. Mr. Townsend is now on the Fish Commission steamer, I think, and was at the time these plates were made originally.

Q. And Dr. Bean?—A. I am not sure about his position. I think he is curator in the Museum.

Q. These plates were prepared for him?—A. Yes, sir.

Q. And others for Mr. Townsend?—A. Yes, sir.

Q. You know that these men paid for them out of their own pockets?—A. Yes, sir.

Q. Did you never present a bill for your work to the Fish Commission. Here under the head of "vouchers" from the Treasury Department it seems that you have presented a bill. I notice a memorandum here indicating that some voucher had been presented to the Treasury Department as coming from you.—A. I am sure there has been nothing from me since the time I was first directly connected with the Commission.

Q. At that time did you present bills to the Commission?—A. No, sir; before that time I presented bills to the Commission and was paid for my work by the piece.

Q. When was that?—A. That must have been up to the year 1882. My connection with the Commission commenced in 1871. I was one of the first employés.

Q. You were continuously in the employ of the Commission from 1871 to 1882?—A. No, sir.

Q. Occasionally?—A. Yes, sir.

Q. How much at a time?—A. I think perhaps only two summers. I went away with Professor Baird.

Q. From time to time after that were you occasionally employed?—A. Not on a salary, but mostly by piece work.

Q. For which you presented bills to the Government, that is, to the Fish Commission?—A. Yes, sir.

Q. And you were paid those bills?—A. Yes, sir.

Q. To what extent were you paid for all that work?—A. There must have been——

Q. I mean dollars and cents?—A. I do not think I could approximate it at all. It ran over so many years.

Q. You did a great deal of work?—A. Yes, sir; there was a great deal of work done.

Q. Was much of the work done by you in the nature of taking photographs of scenery and things of that kind?—A. Not very much of that; in fact, very little of that.

Q. What did it consist of mainly?—A. Mostly the Fish Commission stations. For instance Battery Island. I made views of Battery Island at the time the Fish Commission occupied it. Then the Wood's Holl station, the Wytheville station, taking general views of the stations and surroundings and the apparatus used.

Q. Was this work of sufficient magnitude to occupy you a great deal of your time?—A. After 1882 it was.

Q. I mean during the time for which you presented these bills upon which you got paid for piece-work. I wish to know whether the magnitude of the work was such as to take up most of your time?—A. Oh, no; only comparatively a very small part of my time.

Q. Were you doing other work at the same time?—A. Yes, sir; doing work for the Smithsonian and National Museum.

Q. Did you present bills for your work for the Smithsonian and National Museum the same way, for piece-work?—A. Yes, sir; at that time I did. I also did the photographic work of the Agricultural Department at that time, and the Naval Observatory.

Q. To what extent was the work that you did of a private nature, taking scenery and so on, that was not germane to the work of the Commission?—A. I am not aware of any private work.

Q. But you did take pictures of scenery, which work was not connected with any fishery business particularly, pictures of scenery as such without reference to the work of the Commission?—A. I did not understand it as such. I understood that these views were taken with a view to their building additions to the buildings, or something of that kind; that they were to be used in getting up plans for additional buildings or something to that effect.

I should mention, perhaps, a lot of work that I did for the London Fisheries Exhibition, which came under the direction of the Fish Commission. In that case I took a great deal of scenery. I went all around the coast from New York to Eastport and took views of the fishing vessels in action, and then I took views of fishermen's homes.

Q. In what year was this?—A. 1882. That was when my direct connection with the Fish Commission commenced.

Q. From that time on in what way were you paid?—A. By the Fish Commission.

Q. In what way?—A. A salary.

Q. Did you do any more piece-work after that?—A. No, sir; no more piece-work after that.

Q. Did this salaried relation continue up to the time that you took your present position?—A. Yes, sir.

Q. I mean the salaried relation to the Fish Commission; did it continue up to the time you took your present position?—A. Yes, sir.

Q. Since you have taken your present position, as I understand you, you have not received any pay whatever directly from the Fish Commission?—A. No, sir.

Q. And such services as you have rendered have been paid for, or compensated for, rather, by certain work done by a laborer who is working under direction of the Fish Commission who did certain work for the institution for which you were working, namely, the Smithsonian?—A. Yes, sir. In case the work that was ordered required such skill as this man had not, then I did the work myself. Then he worked for the Museum sufficient to compensate the Museum for my time.

Q. In doing that did you do any work of a private nature for any individual connected with the Fish Commission?—A. No, sir; not that I am aware of. I am quite sure I did not.

Q. Did you present any bills for any work?—A. No, sir.

Q. Who paid for the material?—A. The Fish Commission paid for the material used on their work.

Q. Even though the work were done with reference to—that is, when the scenery was taken—with a view to the interests of the Fish Commission, the question is, who got these photographs; whose property were they afterwards?—A. The prints from the plates were delivered to the Commissioner always, and the plates are filed in the National Museum.

Q. Do you know of any individuals having these pictures who seemed to have acquired possession of them as their own personal property afterwards?—A. I am not aware of anything of the kind. The employés sometimes came in, and sometimes they picked up discarded prints, prints that were perhaps imperfect, and which were thrown into the waste, and carried them off. But I am not aware that any were furnished to parties who were not entitled to them.

By the CHAIRMAN.

Q. The object of taking these pictures was to illustrate the operations of the Fish Commission work?—A. Yes, sir. There was a large amount of work—about 700 plates—for the London Fisheries Exhibition.

Q. That was done under your supervision?—A. Yes, sir.

Q. That was paid for by the Fish Commission?—A. I was paid a salary far that.

Q. What year was that in?—A. Eighteen hundred and eighty-two.

Q. That was under Professor Baird's administration?—A. Yes, sir.

By Senator SQUIRE:

Q. State whether the practice of the Fish Commission in taking these pictures and spending this money for materials is any different now or has been any different during Mr. McDonald's administration from what it was under Professor Baird's administration?—A. There has been some difference. There has been less of the higher class of work done.

Q. Do you mean under Mr. McDonald?—A. Yes, sir. I should explain that. Professor Baird viewed the thing from a scientific point of view, and he had a great many pictures made of fishes and such things which were purely scientific pictures. Colonel McDonald has not had that done. His work has been almost exclusively copies of plans of buildings, and, as I said before, building sites and such things as that.

Q. Do you know anything about any vouchers paid to Robert Leitch

& Sons or Thomas Summerville & Sons, of Washington?—A. For printing frames, perhaps, for making photographic prints, copies of large plans, etc. Quite recently, within two months, there has been something of that kind.

Q. Printing frames?—A. Yes, sir; the large frames in which the glass is worked, and then a tracing is put in that, and then the paper behind it, by which means the copies are made by exposure to light. These frames are perhaps as large as this table [indicating] and rather expensive.

By the CHAIRMAN:

Q. For the reproduction of plans and buildings?—A. Yes, sir. There is some fine carpentering work and some fine glass work upon them.

By Senator SQUIRE:

Q. You do not know anything about the amounts of these bills, or whether the articles procured were necessary or not?—A. They were necessary, because they were ordered on my requisition.

Q. How expensive are they?—A. I think two frames cost about \$50.

Q. You regard them as essential?—A. Yes, sir; they were absolutely necessary in fact, because I had allowed this man to use a frame belonging to the museum, and this frame got in such a condition that it could not be used longer and was not fit for the museum work, and so the Fish Commission had to furnish frames then to take the place of that.

TESTIMONY OF JOHN GAY, Recalled.

JOHN GAY, being recalled, testified as follows:

By the CHAIRMAN:

Q. Why did you leave the Pennsylvania commission?—A. For the reason that the term of the board of which I was president expired, and there was a new board appointed by the incoming governor, Governor Beaver. It was political. It is a common thing for a State board to go out when there is a change of governors.

Q. While you were in the employ of the Pennsylvania commission, they established a fish hatching station at Erie, Pa., did they not?—A. Yes, sir.

Q. What were your duties while at that station?—A. I had charge of the construction of the station.

Q. Did you have the oversight of it after its completion and after it went into operation?—A. After the completion I had the general charge of it as president of the board, just as a commissioner would have.

Q. When this station was fitted out who was employed to fit it up?—A. The party whom we employed was William F. Page, the fish culturist of the United States Fish Commission.

Q. Was his work done satisfactorily?—A. Yes, sir; there was no reason to object to it in any way. I think a little explanation there would be proper. The reason that Mr. Page was employed was because he was a trained expert in the handling and operation of the McDonald hatching jar. We adopted the McDonald jar after I had made a thorough examination of the different jars, the Chase jar, for example, at Detroit, and I decided to accept the McDonald jar, which was agreed to by the board of commissioners, and Mr. Page was there during one season to instruct our men in the handling of the jars. There is some skill required in it and our men had been only engaged in trout culture

and had never handled the jars. That is the reason Mr. Page was taken there. That is the reason and the only reason.

Q. His work was satisfactory?—A. Yes, sir; we had no reason to object to it.

Q. Did you hear of the position of inspector of stations of the United States Fish Commission during the management of the late Professor Baird?—A. No, sir; I never did.

Q. What is your present salary?—A. Fifteen hundred dollars per annum.

Q. Under whose administration was the office of inspector of stations established?—A. Professor Goode, as I understand.

Q. And continued by Colonel McDonald?—A. Yes, sir; the present Commissioner.

Q. Are your expenses paid by the Government outside of your salary in addition to your salary?—A. When I am in the line of duty my expenses are paid just as any other employé of the Commission would be.

Q. Did you ever have anything to do with the location of the Colorado station?—A. Yes, sir; I selected the site.

Q. Please give the reasons for its present location.—A. The reasons are that the present location is the very best that—

Senator SQUIRE. I think he has already answered that question. I think he stated that it is about 6 miles from the railroad.

The WITNESS. Yes, sir.

Senator SQUIRE. I remember that.

Q. What was the amount of the special appropriation for this station?—A. The amount was \$15,000.

Q. How much of this appropriation had been expended previous to advertising for bids to construct the building?—A. I am unable to state the amounts that have been expended. The only expenditure that I am aware of was for advertising for plans.

Q. That is before the selection of the location?

The WITNESS. You mean what my expenses were in selecting it.

The CHAIRMAN. How much of this appropriation had been expended previous to advertising for bids to construct the building?

A. My expenses there in the fall of 1888, in September and October. I was there three weeks. Counting my time in going from Duluth and my return to Detroit I was gone exactly one month. I left Duluth on the 14th of September and returned to Detroit on the 14th of October. Giving one week in going and coming I was in Colorado three weeks. I do not think my expenses were charged to the Colorado station simply from the fact that we had no money appropriated at the time for the Colorado station. I was merely on a tour of investigation. I do not think that was chargeable to the station at all.

Q. In anticipation of expected appropriation you were looking for a proper location?—A. Yes, sir; just as if the Commission might ask me to go into Virginia to look for a station, not having any appropriation for it. It was charged to general account. Mr. Gill can give you that.

Q. What was the amount of the contract for which the building was let?—A. According to my recollection the amount was \$12,672.

Q. Were there any alterations made in the plan of the building after the contract was let?—A. None to my recollection.

Q. Why was cheaper material substituted for that named in the original specification?—A. I have no recollection of any cheaper material being substituted.

Q. The material used was the same as was contracted to be used?—A. You see I left there on the 15th day of October, and the foundations

were not quite completed at that time, and anything that was done after that did not come under my eye.

Q. Have you been there since?—A. No, sir.

Q. Can you give the total cost of all expenses connected with the construction of this station?—A. As I said before, the contract price was \$12,672. The building has not been taken off the hands of the contractor, and there is a sum, probably from \$2,000 to \$2,500, due the contractor in case his work is approved. Now, the original appropriation was \$15,000, and the difference between \$12,672 and \$15,000 was charged, say, for preparing the plans and, I suppose, advertising, and probably my expenses while I was there were charged to the station, which was a proper charge.

Q. Have you any knowledge of any funds being diverted from other appropriations to the payment of any of the liabilities properly chargeable to this station?—A. I have not.

Q. Did you have anything to do with the location of the station at Put-in-Bay, Lake Erie?—A. I located it.

Q. Who made the plans for this station?—A. I understand Mr. Blaisdell made the plans.

Q. Under whose direction were they prepared?—A. The Commissioner's.

Q. By whom were said plans approved before the work was advertised for and the contract let?—A. I saw the blue prints on which the Commissioner's name was written as approving it.

Q. Who received this contract for the building?—A. Mr. George E. Gascoign.

Q. Do you know the amount of the contract?—A. Indeed I can not recollect the amount. I did know it at the time, because I had the papers executed.

Q. Do you know of any changes being made in these plans after they were approved?—A. Yes, sir; having been ordered to be made.

Q. By whose authority were these changes made?—A. By the order of the Commissioner.

Q. Had you anything to do with the location of the hatching station at Gloucester City, N. J.?—A. Yes, sir; I had. I explained the whole thing to you.

Q. What was the total amount expended for carrying on the work at this station for the season of 1890?—A. I can not answer that without referring to my papers.

By Senator SQUIRE:

Q. Can you state approximately?—A. Indeed I can not. I have been so busy since I came back with other work that I could not. The fitting up of the station, I think, was \$800.

By the CHAIRMAN:

Q. What did the work cost in years past for the same station?—A. I can not tell you that.

Q. In what waters were most of the shad fry placed this year from that hatchery?—A. In Big Timber Creek.

Q. Were any special favors shown to the Pennsylvania Fish Commission?—A. No, sir; there were not. In fact, we have received more favors from the Pennsylvania Fish Commission than we have shown them.

Q. Have you ever devoted any of your official time to visiting Senators or Members of Congress to influence legislation, to defeat what is

known as the Paddock bill to transfer the Fish Commission to the Department of Agriculture?—A. No, sir.

Q. Have you ever written any articles for the newspapers urging petitions being framed and sent in to Congress urging the defeat of the bill to transfer the Fish Commission?—A. Not to my recollection; no, sir.

TESTIMONY OF J. S. GOLDSMITH.

J. S. GOLDSMITH, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. J. S. Goldsmith.

Q. Where do you reside?—A. I am living at Tacoma, D. C.

By Senator SQUIRE:

Q. You reside in Washington. That is a subdivision. You have no post-office out there?—A. No, sir; my post-office is at Tacoma.

Q. There is a post-office there?—A. Yes, sir.

By the CHAIRMAN:

Q. Were you ever employed by the U. S. Fish Commission at Fort Washington?—A. Yes, sir.

Q. When?—A. In the spring of 1884 and 1885.

Q. Who was Commissioner at that time?—A. Professor Baird.

Q. What length of time were you employed there?—A. During the shad season, which was generally two months, not over two months and a half.

Q. What were your duties while there?—A. I kept reports. As the seine came in I made a report of the number of shad, the number of herring, the number of offal fish, and the number of ripe shad; and then after that I kept a record of the number of eggs shipped to Washington and hatched, the number of eggs that did not amount to anything, the number of fish hatched at the station and planted in the river; also the time of the men, thirty or forty employes. I kept an account of their time; and I suppose that is about all.

Q. Had you anything to do with the shad seine account?—A. Yes, sir. The men would sometimes come in and get two or three or four or five dollars. We allowed them their money up to the time they had worked. The darkies would want to draw all along.

Q. At the close of the season, when the accounts were settled up, did you have any money left over in your hands?—A. No, sir, not in my hands. Mr. James Carswell was in charge of that.

Q. That money I understand to be the money received from the sale of fish?—A. Yes, sir.

Q. Did you have charge of that money?—A. Mr. Carswell was the man who had charge of that money, and at times he gave me from fifteen to twenty or thirty dollars; but the money turned in from the sale of fish was delivered to Mr. Carswell.

By Senator SQUIRE:

Q. What was this money given to you for?—A. To give to the men, the seine-haulers. They allowed them a dollar a day.

Q. In the payment of their wages?—A. In the payment of wages.

By the CHAIRMAN:

Q. You disbursed the money in payment of the men and accounted

to Mr. Carswell for it?—A. Yes, sir. The books ought to be in the Commission to show for it. I kept a complete record of each dollar.

Q. Did you take receipts?—A. I took no receipts, because there was not a man there capable of writing his name. I kept an accurate account of the money that had been given them, and then we deducted that from the amount of their wages.

Q. When you settled with them at the end of the season, did you take a receipt from them for the total amount paid?—A. I can not recollect, but I think we did—yes, and I had them sign their names with a cross-mark and I wrote the names. I wrote out receipts in each case and balanced up their accounts, paid them their money.

Q. Having a gross receipt?—A. Yes, sir.

Q. That you turned over to the officer in charge. How long since you have been in the employ of the Commission?—A. Since 1886. I left the Commissioner December 3, 1886.

Q. Have you had any particular knowledge of it since?—A. No, sir. I am connected with the National Museum as assistant property clerk in charge, during the absence of the property clerk. We are closely connected down there, but still I have not the time to go over and take the interest I used to like in fish; in fact, I have not been there since I left the Commission.

TESTIMONY OF F. L. DONNELLY, Recalled.

F. L. DONNELLY, being recalled, testified as follows:

By the CHAIRMAN:

Q. What has been your special work for the last six month?—A. I keep the records in the office of the division of distribution. I have been there for about eighteen months.

Q. Have you been engaged upon statistical work any part of this time?—A. Yes, sir. I tabulate the operations of the Commission, the production of fish and the distribution of fish.

Q. Did you make up the statistics which were to be used with the letter to Hon. Mr. Henderson, of the sub-Committee on Appropriations, in March last?—A. Well, I do not know whether the tables I made up were used for that purpose or not. I tabulated the operations of the Commission for several years, showing the increase of work; and whether that statement was submitted to Mr. Henderson I am unable to say. I furnished it to the Commissioner, and what use he made of it I am unable to say.

Q. How did you prepare those tables? Upon what data did you prepare them?—A. We get our information from the station superintendents and the messengers who transport fish.

Q. That is done from time to time?—A. From time to time. They send in the information, and when it is all together it is tabulated.

Q. Just state how the tables were made and just what points were shown by these tables?—A. They show the production, the number of fish produced at the stations, the number distributed and planted in the waters of the United States, and in detailed form giving the exact number of each species or variety, the streams in which they were deposited, the number deposited, the number lost in transit, and the persons who made the trip and did the work. They also show a comparative statement of the increase or decrease in the work each year.

Q. At each station?—A. Yes, sir.

Q. And that information you received from the different stations and

from the persons in charge of distribution?—A. Yes, sir; they furnish the information and I record it and tabulate it.

Q. The statement which has been alluded to here, which was furnished to Mr. Henderson, presumably, was a correct statement made up from the records in the office, was it?—A. Yes, sir; a correct statement, tabulated from the information furnished us by the superintendents and the traveling men.

Q. Did you not say to Mr. Gill that the way he proposed to use the tables prepared by you was not a true statement of the case?—A. No, sir; I did not, emphatically.

Q. Did not Colonel McDonald agree with you then that they ought not to be used as grand totals of the operations of the Commission?—A. Emphatically, no, sir; he did not.

Q. Did not Mr. Gill say that he only wanted the grand totals and not the separate items?—A. No, sir; he did not.

Q. Is there not quite a difference between the number of eggs taken and the number of young fry distributed?—A. Yes, sir. Of course there is a number lost in incubation, and a number lost in transportation. The statements that I make up show that conclusively. It is all in detailed form.

Q. It shows the loss?—A. By incubation and transportation.

Q. In your opinion are the reports as to the production and distribution of fish, rendered to you from time to time, substantially correct?—A. Yes, sir; I judge they are, from my experience in the work. They appear so. The figures seem to agree. For instance, we make a transfer of eggs from one station to another. They are measured and estimated at the station which produces them. Then they are transported to the receiving station. When they are received they are remeasured and estimated, and a receipt is sent to our office, and we make a comparison, and the station that receives the eggs acknowledges a lower number received than were transported. That is due to shrinkage.

Q. And those receipts show a less number received than were transported?—A. There never was a greater showing; always less. I would like, inasmuch as there has been some question about the tables, to have them submitted. They are all tabulated in type-writing form, sixty or seventy pages of them.

Q. Have you ever been requested by the Commissioner to prepare any tables and to compile them in a manner which would show larger results than the regular reports received would show?—A. No, sir. Colonel McDonald is the strictest man regarding the correctness of work I ever worked under. He is very particular about it, and I always do my best to make the work as correct as possible.

Q. Have you ever made any tables to be used before the appropriation committees of Congress which would be an unfair exhibit of the business done by the Commission?—A. No, sir. I have never been instructed in that respect. I do not think that Colonel McDonald has ever attempted to influence any one to make a misleading statement. I do not think he would. So far as I know he is a most honorable and conscientious man. I have worked for him for ten years and that is my opinion of him.

At 12 o'clock and thirty minutes p. m. the subcommittee adjourned until to-morrow at 10 o'clock a. m.

WASHINGTON, D. C., *July 10, 1890.*

The subcommittee met at 10 o'clock a. m.

Present: Senators Stockbridge (chairman) and Squire.

TESTIMONY OF EDWARD S. RAYMOND—Recalled.

EDWARD S. RAYMOND, being recalled, testified as follows:

By the CHAIRMAN:

Q. You have already testified before the committee, have you not?—

A. Yes, sir.

Q. Since you testified before the committee have you had any conversation with the newspaper men who have brought these charges against the Commissioner and his management?—A. No, sir; I do not know who they are.

Q. Do you know of any reason why you should be recalled?—A. No, sir.

Q. If you know any reason why you should be recalled you can state it.—A. When I was here before I was not connected in any way with the Commission. I have been since that time and am now working in it, since July 1.

Q. In what capacity?—A. As clerk in the statistical division.

Q. Can you give us any information touching this inquiry as to any criticisms upon the management which you were not aware of before?—A. No, sir; I have no knowledge whatever of the management of the Commission, except what I have heard, and that of course you do not want me to state. I have no personal knowledge of it at all. If you remember, some time in April Senator Hoar spoke to you in regard to signing a petition for me for the librarianship. You said you had already signed one for Mr. Bliss, and that you cared only to sign one. I was an applicant for the position, and I do not know of any other reason why I should be called. I did not get the position.

Q. But you have been appointed to another position?—A. Yes, sir.

Q. You were appointed at the request of Senator Hoar?—A. No, sir; Senator Dawes.

Q. What is your salary?—A. Nine hundred dollars per annum.

Q. Did you take the place of any one who was discharged?—A. No, sir; the gentleman whose place I took is to be removed to the Museum. He is to have another position.

Q. You came in to supply his place?—A. Yes, sir.

Q. I do not know of any further questions to ask you.—A. I have nothing to say against Colonel McDonald or any person in the Commission. I do not know of anything. Of course all I know is what I hear. I have no personal knowledge of anything of the kind.

TESTIMONY OF SHERMAN F. DENTON.

SHERMAN F. DENTON, being duly affirmed and examined, testified as follows:

By the CHAIRMAN:

Q. Where is your residence?—A. My residence has been near Boston, at a place called Wellesley, but I am just at present living in Washington. I have been at the Fredonia Hotel for a few days.

Q. Are you in the employment of the Fish Commission?—A. Yes, sir.

Q. In what capacity?—A. Draughtsman—scientific draughtsman—drawing fishes, and such as that.

Q. When did your connection with the Fish Commission commence? How long have you been employed?—A. I have been a salaried member since December; but I worked for the Commission two years before that on piece-work, so much a piece.

Q. When were you appointed?—A. In December last.

Q. What is your salary?—A. A hundred and twenty-five dollars a month.

Q. Were you appointed by the present Commissioner?—A. Yes, sir.

Q. Have you seen from time to time various newspaper articles published attacking the management of the Commission?—A. Yes, sir.

Q. Can you give us any information as to any of the charges that were made?—A. I can not. I am outside almost entirely of everything of that kind. I simply draw fish for scientific purposes, and I feel as if I was outside of the Commission. I do not have any connection with it otherwise than simply the scientific drawings.

Q. Do you conduct your work at the Central Station?—A. Yes, sir; at the central building.

Q. What are your hours?—A. I work from 9 to 12 and from 1 to 4.

Q. Are you pretty prompt in your attendance?—A. Yes, sir.

Q. One of the charges is that there is laxity on the part of the employés?—A. Yes, sir; so I understand. I am always on hand unless something serious happens.

Q. I will read you the resolution under which this inquiry is proceeding:

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's office, and especially in respect to the changes in the force, compensation paid to employés, and any alleged favoritism, or other undue administration, and report to the Senate thereon.

Now, in respect to the changes in the force, do you know of any changes that have occurred?—A. I know some changes have occurred. I know Mr. Blaisdell was discharged.

Q. Do you know for what reason?—A. I heard it was for some interference, writing some letters, it seems to me, or something of that kind. That is simply what I have heard. I did not know of it until some time after it occurred.

Q. Do you know anything about any favoritism being exercised there?—A. No, sir. I will say in connection with that, that I came down to Washington a total stranger to every one and did not know a single inhabitant of the city. I exhibited my work and went to work for the Commission and have been always treated fairly and squarely.

Q. You do not know of any one being treated with special favoritism?—A. No, sir; I do not to my knowledge.

TESTIMONY OF WILLIAM P. SEAL.

WILLIAM P. SEAL, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Your residence is in Washington?—A. I am living at the present time in Alexandria. My real home is in Philadelphia.

Q. Are you in the service of the Fish Commission?—A. Yes, sir.

Q. In what capacity?—A. I am superintendent of the aquaria.

Q. How long have you been in the employment of the Commission?—

A. My regular employment dates back, I believe, to about the first of November, 1888. Prior to that I had been engaged in special work under Professor Baird at his solicitation at Wood's Holl during the summer months. I entered the service of the Commission at Professor Baird's solicitation. In fact, for three or four years prior he endeavored to get me to take a place in the Commission, but could not afford to pay me what I desired.

Q. Are you employed permanently by the present Commissioner?—

A. Yes, sir; I was given a permanent place by Professor Goode when he was acting as Commissioner. I was then at Wood's Holl. He had me come to Washington, and had me appointed permanently.

Q. What was your compensation at the time of your permanent appointment?—A. Fifteen hundred dollars, and it is still the same.

Q. Are you acquainted with what is known as the McDonald filter?—

A. Yes, sir; I am fully acquainted with it, and the probable cause of its development.

Q. Is it used here to filter water which is used in the Commission?—

A. Yes, sir. I would like to give a history of the causes of that filter. I think it is one of the most desirable things that is now being developed in regard to the work of the Commission.

Q. If you do please do it satisfactorily to yourself and as quickly as you can, because we have got a great many witnesses who are supposed to know about it.—A. I might go back to the Centennial Exposition in Philadelphia. The difficulties encountered in providing clear water at the Centennial at Philadelphia were very great. At the New Orleans Exposition the aquaria exhibit of live fish was an absolute failure, because of the difficulties in filtering the water. I do not know the method they employed there, but it was one of those methods of coagulating by the use of alum. At the Centennial Exhibition I had charge of the aquaria exhibits. We had very great difficulty there. The water of the Ohio River was so muddy that it was absolutely necessary to filter the water, and we used a filter, one of the only kind by which it is possible to filter enough water for our uses, using alum for the coagulation of sediment in the water, the albuminous sediment, and we met with a number of accidents resulting with loss of the fish. We, of course, finally overcame the difficulties and made the exhibits successfully; but there was always a danger in the use of those things. The use depends upon the careful watchfulness of the attendants employed. They have got to understand them thoroughly, and there are many things which the ordinary man will lose sight of and forget, and for that reason accidents are constantly resulting.

That stimulated Mr. McDonald to develop a filter which should be absolutely automatic and which should have none of those characteristics which would be injurious, and which should be automatic, cleansing itself automatically. That is the history of that filter. It is absolutely necessary in the establishment of aquaria that there should be something of the kind. I myself, of course, consider that it is one of the most valuable things that has been recently developed in connection with the work of the United States Fish Commission.

Q. Let me ask you a question right there. Is the filtered water used in hatching the eggs?—A. No, sir; but in the keeping of the fish in the aquaria, and it is the desire, although it is not an absolute necessity, to eventually develop these filters to such an extent that filtered water can

be used in the hatching work, because the eggs become clogged with sedimentary deposit which accelerates the growth and development of fungus, and moreover it is difficult for a man to see eggs as closely as he ought to and to cleanse them as he should.

Q. So that you think it would be valuable in connection with the hatching of the fish as well as in the aquaria?—A. I have no doubt of it. I believe that although, in nature, fish are subjected to the same influences and to all the dirt and all that, that it must result in injury to a very great extent.

Q. Has this filter been perfected to such an extent that it is now in successful use?—A. It is now in practical use, and I can make a statement regarding the use of it which may be considered extraordinary by any one connected with the handling of fish.

Q. It is in use at the Central Station, is it not?—A. Yes, sir.

Q. Is it in use anywhere else?—A. No, sir; not that I know of. We have kept trout there lately during this hot weather at a temperature of 75 degrees without ice—of course it would be, without ice, at 76 degrees—by the use of a little jet of water injected into this aquaria through the McDonald filter. The last of these fish died yesterday or night before last, when the temperature had attained 82 degrees, something extraordinary and unheard of heretofore. The idea is that a little jet of water impinging on the surface of the water with considerable force carries with it a large amount of air, disperses it in minute bubbles and keeps the water constantly charged with that. Ordinarily, there is not at that temperature air enough to support life. It is filtered through tiles. It is not automatic in its methods, and is not possible to pass it through with force as is done in the McDonald filter, so that you may drive this water into the aquaria. It is objectionable, of course, because it has to be cleaned by hand very frequently, while the McDonald filter is automatic in that respect, cleaning itself.

Q. Has this McDonald filter, which is in use, been constructed at the machine-shop at the Central Station, or was it made outside?—A. I believe—I could not say positively about that—that it has been constructed there at the machine-shop. The castings have been made outside. I think it has been constructed there.

Q. The tiles were made outside?—A. Yes, sir.

Q. But put together and put in working order by the machinist at the station?—A. Yes, sir.

Q. And it is in use for the benefit of the station?—A. Yes, sir; and it was developed for use in connection with the work of the Fish Commission.

Q. You have been familiar with the whole of it?—A. Yes, sir; and have been in consultation with Colonel McDonald about it during all its different phases of development. I have taken a very deep interest in it.

Q. Do you know whether any of those filters have been made and sold to outside parties?—A. I do not think so. I know that one was sent to the Franklin Institute, at Philadelphia, at the request of Dr. Wall, the secretary of the Franklin Institute, and editor of the *Manufacturing Builder*, for investigation by them, because the sanitary engineers of the country are very much interested in the question of the sanitary filtration of water. At his request, Colonel McDonald sent one on to Philadelphia. But that is Colonel McDonald's.

Q. For exhibition and examination?—A. Yes, sir. I do not think that one has been sold. I do not think that any others have been made,

except one that is in use there and one that Colonel McDonald has in his own house, and probably three there in the station.

The drinking water of the station is also filtered by this filter, and I understand that at the Gloucester (Massachusetts) Station, it is absolutely impossible to get drinkable water there, and therefore it would be very valuable there. It is on an island in the harbor at Gloucester, Mass.

Q. So that you consider it a valuable invention?—A. I consider it a valuable invention in connection with the work of the United States Fish Commission, without any question.

Q. It has been charged in newspaper articles recently that the employés of the department were very careless as to the hours; that they came late and went early. What is your observation on that subject?—

A. My observation is that the organization of the Commission, the general efficiency, is way beyond anything that has been ever known before. When I came to Washington there was a Central Station, but the offices of the Commission were not there. Some time in 1888, the spring or late winter, I was made superintendent of the Central Station. I found a very loose state of affairs there. Of course it was carried on. Colonel McDonald was chief of distribution, in charge of all fish-culture work and distribution, and all that.

Q. Professor Goode was acting as Commissioner?—A. Yes, sir; but Colonel McDonald had his office on Massachusetts avenue. The general office of the Commission of course was not cognizant of what was going on there. I found that card-playing was carried on at the office of the Commission; that the employés were playing cards and carrying on in a way which was not proper. I stopped it at once, and encountered a great deal of hostility on account of it. I reported it to Colonel McDonald, and he said if he had ever known of it or had any intimation of it, he would have stopped it peremptorily. I believe the very men who are making complaints of inefficiency were the very men who were engaged in the looseness at that time, some of them at least. I can see every month an increase in the efficiency of the service, as fast as it is possible for the Commissioner to make the desired reforms.

Q. Has the number of employés been increased since your connection with the Commission?—A. About that I am unable to say. I know very little about those things. I have heard a great many things of the kind, rumors, but they are unknown to me—things that I should have been cognizant of if true, but I never noticed them.

Q. Have you any knowledge of any favoritism in the management of the office on the part of Commissioner McDonald? It is charged that he has his favorites who are favored in various ways.—A. I do not think so. I have never noticed anything of the kind. I believe that Colonel McDonald will advance any worthy man. I have never seen him advance a man on account of political considerations or favoritism, but I think he is thoroughly conscientious; that it depends upon a man's ability. The fact is that some men are growing here as elsewhere; they are developing, developing strength; they are showing ideas and ability.

Q. And he is inclined to recognize these men?—A. Yes, sir; they get along faster than others, and that promotes jealousy. There are men who are occupying positions beyond their merits, but who really feel they are being —

Q. Discriminated against?—A. Discriminated against, because they are not promoted faster; when the real truth is that they are already promoted beyond their deserts.

Q. Do you know Mr. McCormick, who is in the employ of the Commission?—A. No, sir; I do not know him either by name or sight.

Q. Do you know a young man by the name of Lewis?—A. I know Lewis; yes, sir.

Q. He is said to be a relative of Colonel McDonald.—A. Yes, sir; I believe he is a nephew.

Q. Is he a competent employé?—A. I believe so. I believe thoroughly so, as far as his duties are concerned, which are of a clerical nature, principally. I think he is an admirable young man. There is one thing certain, he attends to his own business and does not bother anybody else or anybody's else business, and attends to his work.

Q. Do you know of the reasons which led to the dismissal of Mr. Blaisdell from the service of the Commission?—A. Only by hearsay. I have never spoken to him in my life. I have passed him hundreds of times, but have never spoken to him.

Q. You do not know the reason of his dismissal?—A. I met Mr. S. C. Brown one day, who has already testified here, and he gave me a statement of the case. I, myself, being a soldier of the late war, was interested. I asked Colonel McDonald about it and he told me his side of the story, and that is all I know about it.

Q. What did he tell you was the reason for Mr. Blaisdell's dismissal?—A. What Mr. Brown told me.

Q. I mean Colonel McDonald?—A. Colonel McDonald said that Mr. Blaisdell had been employed under a special appropriation, I believe, for a survey of Great Falls, or something in connection with the establishment of a fishway there, originally; that when that was completed he begged, I believe, if I am not mistaken, and brought pressure to bear to get a permanent appointment, but the Commissioner was not disposed to appoint him, or could not give him a place, could not find any place, and finally I believe he provided for him temporarily with the understanding that it was to be a temporary appointment; that he was finally reported for incompetency, I think, and discharged for incompetency finally; but afterwards, it seems to me he brought some pressure to bear—influence, to bring about his appointment to some other position, as librarian, or something of that kind.

Q. But he was not appointed?—A. He was not appointed.

Q. Have you ever been at the Leadville Station?—A. No, sir.

Q. Have you ever been at the Put-in Bay Station, Lake Erie?—A. No, sir.

Q. Your duties have been here?—A. Yes, sir; I am familiar with Mr. Gay. I know something about the charges regarding Mr. Gay. I know something about Mr. Gay.

Q. What is your opinion of Mr. Gay's fitness for the position which he occupies?—A. Well, sir, Mr. Gay was, I believe, and is generally considered, as being one of the most efficient commissioners the State of Pennsylvania ever had. When he was commissioner of the State of Pennsylvania, he was the active member of the board.

Q. He was president of the board?—A. Yes, sir; he supervised all the work personally, the other members not having much knowledge of fish-culture, and Mr. Gay's reputation in Pennsylvania is very high. Of course the boards change with a change of administration. Of course, when Governor Beaver was elected Mr. Gay and the other members of the board dropped out. The idea seems to prevail among some men in the employ of the Commission that a man who is competent to manipulate eggs, or a man who is competent to take spawn, or a man who is competent to carry fish on a car, is an efficient culturist. That

idea is very wrong. Those are branches of fish work, but not fish-culture. They imagine that a man who understands one of these branches of the work is an efficient culturist and knows everything about it, and that they have the broad and comprehensive ideas which are necessary to conduct a great organization like the Fish Commission. Mr. Gay is considered by the Commission a thoroughly competent man, a man who is a practical business man, of practical business training, thoroughly competent to attend to his work.

Q. Do you know the man who is in charge of the Leadville Station?—

A. Mr. Robinson; yes, sir.

Q. Do you know anything about his habits, whether he is a temperate man or otherwise?—A. When Mr. Robinson was younger, and a number of the other men were younger, before I went to the Commission, I have heard that they drank some. I have myself never seen Mr. Robinson under the influence of liquor, or in any such condition that he was not competent to attend to his business. I consider him an honest, honorable, energetic public servant.

Q. A good man to be in charge of a station?—A. Yes, sir; I think so. He is one of the class of men who are rising by their own merits, and who encounter the envy of others. These attempts to damn his character have occurred before in the Commission.

Q. And from your knowledge of him I understand you to say that you do not believe he is intemperate, habitually intemperate?—A. No, sir; I do not believe it.

Q. One of the witnesses testified that he was?—A. He may take a drink occasionally. I do not know anything about that. Many men do, and it does not unfit them for their business. Those things are private and personal affairs, which have nothing to do with their official duty.

Q. Unless they interfere with their duties?—A. Unless they interfere with them.

Q. I will read you the resolution under which we are conducting this inquiry, and then I will ask you to make any observations touching these points which occur to you.

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's Office, and especially in respect to the changes in the force, compensation paid to employes, and any alleged favoritism or other undue administration, and report to the Senate thereon.

Now, if you will, in a concise and brief way, give us any information you have on those points, we would be glad to have it.—A. I believe I can say in a few words what will cover it all. If I would leave the United States Fish Commission to-day, and were desirous of injuring Colonel McDonald or the administration of the United States Fish Commission, I do not know of a single thing I could lay my hands on which I think would detract from its creditable record. I do not know of a single thing. I have heard much stuff which must be utter nonsense and absurdity. I have heard charges of drunkenness on the floor of that station, and all that. It certainly would have come to my knowledge if true. Many of those things that S. C. Brown told me concerning the drunkenness of Mr. Worth I had absolutely never heard of before, and scandal flies very rapidly in a place of that kind. It is very strange if it were so that I should not have known of it. Mr. Worth is one of those men who is growing in the Commission. In 1888 he was vice-president of the Maryland Fishery Society, which will show you something of his standing. He is a growing man, and as he

grows of course he will deserve and will get promotion, because the efficiency of the organization, the success that the Commissioner himself depends on, is in choosing the proper subordinates to carry on his work; and if every individual who thinks that he ought to have preferment would be allowed to have his way, you can imagine what kind of a state of things it would be.

Q. It is charged that the Commissioner has appointed to positions in the Commission a large number of his relatives or connections. Do you know anything about that?—A. Nothing, except what I saw in the newspapers. There is young Lewis, whom you spoke about. By the way, you asked me about Mr. McCormick. I do remember now that there is a stenographer who is employed in one of the offices, a quiet, admirable young fellow. I do not know anything about him or the circumstances of his appointment.

Q. Have you any reason to believe that Mr. Lewis is a young man of intemperate habits?—A. No, sir; I believe, on the contrary, that his habits must be exactly the opposite. I do not believe he drinks. If he does I do not know it; there is no indication of it. There is another Lewis, however, who is out at Leadville. I think he was appointed by Professor Baird, and like Mr. Robinson, and like a number of them there, before I came there they used to drink more or less, but I have never seen Mr. Lewis under the influence of liquor at all. If he drank, as most of them did, it was after their hours of duty. I do not know anything about it. I have often heard talk about it. I picked up a cork of a beer bottle in the yard the other day. I might as well take that as evidence of drunkenness as I might any other thing.

Q. You found a beer bottle on the premises?—A. Yes, sir.

Q. Do you know anything about the practice of selling the fish that are taken in the seine at the Fort Washington Station, taken for the spawn of course?—A. I have never heard anything except the newspaper charges. Of course the fish are taken there for the purpose of getting the eggs in them. They are afterwards sent to market and sold.

Q. Do you know what is done with that money?—A. No, sir; I do not know anything about those affairs. I suppose it is properly accounted for.

TESTIMONY OF LUTHER M. CORNWALL.

LUTHER M. CORNWALL, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Please state your business.—A. I am in South Washington; a dealer in groceries and green goods.

Q. What do you know about the Fish Commission?—A. I have been supplying the traveling cars and station at Fort Washington with eatables for the men who have lived on the cars and traveled.

Q. Are the rations supplied by the Government or by the mess?—A. By the mess, as I understand it.

Q. Then your dealings are not officially with the Department?—A. I very seldom got my money from the Department. Once in a while I would get a check from Mr. Herbert Gill, but the man who had charge of the mess would generally pay me off in money. Sometimes if there was delay they would make up an account and Mr. Gill would pay it.

Q. Whatever Mr. Gill paid you understood was charged to the men?—A. Yes, sir.

Q. Are you in the habit of furnishing as part of your supplies any liquors?—A. No, sir.

Q. Cigars?—A. No, sir. If a man got that it was charged simply to his own individual account, on his own separate mess. Sometimes at Fort Washington they used to get something. It was their own individual account and they paid that personally. It had nothing to do with the mess-book. They always carried a private pass-book of their own.

Q. Have you at any time furnished wines or liquors to employes at Fort Washington?

The WITNESS. Have I sent them?

The CHAIRMAN. Have you furnished them with wines or liquors?

A. No, sir.

Q. Private individuals?—A. Sometimes they would send up to me to send them some liquors and I would send it down by the boat. It would not go with their mess at all.

Q. Whom have you sent liquor to there who was in the employ of the Fish Commission?—A. Indeed I do not know now. They had some men who were working on the shore.

Q. Have you ever sent any liquors to Mr. Worth, who was in charge there?—A. No, sir.

Q. I will read you the resolution under which we are making this inquiry, and if there is anything that occurs to you that would come within that scope, I will ask you to give it to us in your own way :

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's office, and especially in respect to the changes in the force, compensation paid to employes, and any alleged favoritism or other undue administration, and to report to the Senate thereon.

Can you give us any information on those points?—A. I can not say that I can. There is only one thing that I can say. I was furnishing them with substantial goods, just as they wanted, subject to their order, and I wanted to cater for the trade this last season, and also year before last, and I went to Mr. Worth and he told me he had already picked out a man to do his dealing with this year. Consequently I did not get it and said nothing about it. They paid me good, fair prices for my goods, and I told them that if they wanted to put it out on contract I would make a bid for it. He said no; the men did it themselves and it was left to them with whom they should deal.

Q. You did not charge that up to the general management of the Fish Commission?—A. No, sir. There were mess-book No. 1 and mess-book No. 2. There were three mess-books. Colonel McDonald had his own book and Mr. Worth had his. The men in the hatchery had theirs. Each bill was paid separately. If the bill was \$100 and there were ten men in the mess, each man was taxed \$10. All bills were paid up promptly in cash money.

Q. It has been charged that the fish taken at the Fort Washington Station, after taking the eggs, were sold, and that that money was used for the purpose of entertaining visitors, for the purchase of wines, cigars, etc. Have you any knowledge on that point?—A. No, sir; none whatever.

Q. You do not know anything about how that was handled?—A. No, sir. I go around the wharf every day and around about that way, but I have never seen anything of the kind in any way. The only way I know how you could find out about the fish business is to get some of the fish men to whom the fish were consigned.

Q. I thought you might know something about the expenditure of that money.—A. No, sir. Since Mr. Worth has been there our dealings have been very small.

Q. Do you know with whom they have dealt during the last year?—A. A man by the name of Tolson, I think, on the corner of Seventh and E streets. All my dealings have been perfectly friendly and nice. I have nothing to say only that I did not get there.

TESTIMONY OF JOHN E. BROWN—Recalled.

JOHN E. BROWN, being recalled, testified as follows:

By the CHAIRMAN:

Q. On your former examination did you testify to all matters of any importance within your knowledge connected with the present management of the Fish Commission?—A. Yes, sir; the length of time I had been in, what I received, and the general conduct of the Commission. You asked me how it was run in regard to running out and in. I told you I thought it was a great improvement upon what it had been for the previous eight years I had been there.

Q. You do not think of anything important that you could inform us about, except what you did testify to?—A. Not a thing in the world, sir. In my testimony about the price that was paid, the expenses of running the Commission, I may not have had it exactly right, because I could not judge; there was so much connected with it that I could not tell.

Q. Do you think there is more help employed about the station here than is necessary to do the work properly?—A. I could not answer that question, because I do not know what their duties are.

Q. In your own department you have men under you, have you not?—A. Indirectly; yes, sir.

Q. Is there more of that sort of help than there is any need for?—A. No, sir; there is less than there has been before. I could not swear positively as to that.

Q. In the general work, in consequence of the establishment of new stations, the amount of property which you have charge of has increased, has it not?—A. Yes, sir; the distribution has greatly increased. There has been a great increase in the work of distribution. We are doing a great deal more work, work that they have never done, different kinds of work.

Q. If you have thought of anything new to testify about in connection with the affairs of the Commission, its management, you will please state it in your own language.—A. I declare I know but very little about the management of it. I know in the department of distribution that it is strictly and carefully attended to all through. I do not know of a more industrious or hard-working man or a man more interested in the work than Mr. Moore. I am directly under him and have to get my instructions from him. He is very strict and very regular with all the employés. There are no favorites.

Q. Are these employés who come under your immediate control prompt in their hours of coming and leaving?—A. Yes, sir. If anything occurs which I have anything to do with, my orders are to report it immediately; if anything is out of the way in any way my orders are to report it.

Q. You think the purpose of the Commissioner is to have things done in a business-like and prompt way?—A. I certainly do.

TESTIMONY OF W. A. DUNNINGTON.

W. A. DUNNINGTON, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Is your residence in Washington?—A. Yes, sir.

Q. Are you connected with the Fish Commission?—A. Yes, sir.

Q. In what capacity?—A. I have charge of car No. 2.

Q. Do you ever meet with losses of young fish in the distribution?—
A. Yes, sir; occasionally.

Q. Are these losses reported and recorded?—A. Yes, sir.

Q. Each trip?—A. Yes, sir.

Q. They are reported to the central office?—A. Yes, sir.

Q. Have you ever made trips with Fish Commission cars where members of the party were not Government employés?—A. Why, no, sir; except in Illinois when we were doing State work.

Q. Building up the indigenous fish?—A. Yes, sir; on purely State trips for the State of Illinois.

Q. Who were then allowed to ride in the cars?—A. Friends of Dr. Bartlett, who is the Commissioner of Illinois. I do not remember who they were now.

Q. Did their accompanying you involve any expense to the Fish Commission?—A. None whatever.

Q. What were the duties of such individuals who accompanied you?—
A. They simply accompanied us on the trip to see how the work was done. They did not go with us to do any of the work at all or to assist in the work.

Q. Have you ever seen or heard of Mr. Worth, who is in charge of the station here, using intoxicating liquors?—A. No, sir; I have never seen him use any.

Q. You have never seen him intoxicated?—A. No, sir.

Q. Have you visited Fort Washington during the last season?—A. No, sir.

Q. Have you ever visited Fort Washington?—A. Not since Mr. Worth had charge of it.

Q. Have you ever been to the Leadville, Colo., Station?—A. No, sir; I have not.

Q. What is your compensation?—A. One hundred dollars per month.

Q. Does the Government furnish you rations on these trips?—A. No, sir; we are supposed to pay our own subsistence.

Q. You have a mess?—A. Yes, sir; \$15 a month it is supposed to cost each man.

Q. You pay that yourselves?—A. Yes, sir.

Q. Have you ever known these distribution cars having been furnished with cigars, champagne, etc., at Government expense?—A. No, sir.

Q. You are not in the habit of using wines or liquors to excess?—
A. No, sir.

Q. How long have you been in the employ of the Commission?—
About seven years.

Q. You were first employed under Professor Baird's administration?—
A. Yes, sir.

Q. Since Colonel McDonald came in charge has your compensation been increased?—A. Yes, sir; it was increased in the first year of his administration, when I took charge of the car.

Q. Is the pay of the messengers in charge of cars uniform?—A. Yes, sir.

Q. Have you ever observed any evidence of favoritism regarding the employes of the department on the part of the Commissioner?—A. I have not.

Q. Do you know of any appointments made by Commissioner McDonald of relatives of his or connections?—A. There are some who are said to be relatives of his.

Q. Can you give their names?—A. R. E. Lewis, Frank McCormick, and C. C. Lewis.

Q. Are the Lewises brothers?—A. Yes, sir.

Q. They are said to be connections of the Commissioner's?—A. Yes, sir.

Q. Are they efficient and good officers of the Government in their departments?—A. As far as I know, yes, sir.

Q. One of the Lewises is stationed at Leadville?—A. Yes, sir.

Q. Do you know anything about his habits; is he intemperate?—A. I can hardly answer that, because I do not know. I of course have heard these things.

Q. You know him personally?—A. Oh, yes, sir.

Q. Do you consider him an intemperate man?—A. I think not, sir.

Q. Do you know Mr. McCormick personally?—A. Yes, sir.

Q. Is he a stenographer or messenger about there?—A. I do not know, really, what his duties are. I think he is in Captain Collin's office, but what he does I can not say.

Q. Now I want to make this thorough. I want you to tell me all you know that bears upon this matter. I will read you the resolution under which this inquiry is proceeding.

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's Office, and especially in respect to the changes in the force, compensation paid to employes, and any alleged favoritism or other undue administration, and report to the Senate thereon.

If you know anything about any of those matters which is of importance, just state it in your own language?—A. Really I do not know of any. I do not know of any favoritism or any changes that have been made that would lead any one to suppose that they were made through favoritism.

Q. Changes have been made for the good of the service, so far as your knowledge goes?—A. Yes, sir.

Q. You say Professor Baird increased your salary and that of the other men in charge of the distribution cars. How much was that increase?—A. It was Colonel McDonald—\$25 a month; that is, my salary was increased. I came in under Colonel McDonald; that is, I took charge of the car under his administration. Then my pay was increased to the same amount as the other two were receiving.

Q. Had the other two been receiving \$100 a month for some years? A. Yes, sir.

Q. When you took that place your pay was put up to their pay?—A. Yes, sir.

Q. What can you say as to the percentage of loss in the transportation of the fry which you distributed last year as compared with former years; that is, were the fish healthy and strong and the loss about the same, or was it greater?—A. My experience this year with shad is that the loss was greater.

Q. To what did you attribute that?—A. I do not know, unless it was

the season. It was a very bad season for gathering eggs, and the fish that were hatched seemed to be very weak.

Q. Did you attribute that to any bad management or negligence on the part of the employés?—A. Oh, I think not.

Q. It was something that nature was responsible for?—A. Yes, sir.

Q. As to the number of fish put in a can during the last year or two, have they been in the habit of putting more or less in cans than formerly?—A. I do not think there has been any increase, so far as my experience goes. I think about the same number.

Q. Have you been on long trips or short trips?—A. Most of my trips have been south—short trips.

Q. Could they put more fish in a can safely on short trips than on long trips?—A. Oh, certainly, sir.

Q. It has been charged that the general discipline of the office was very lax here; that the employés came and went about as they pleased, etc. Can you from your observation say anything on that point?—A. Not as far as I can see. I think every one seems to be there on time and leaves when the office hours close. That is as far as I know.

Q. I can not think of anything else unless you have something in your mind within the scope of this inquiry which I have not drawn out by my questions.—A. I can think of nothing else.

Q. What do you think about the general management from a business point of view. Is it systematic and business-like or otherwise?—A. I think so.

Q. What do you do at seasons of the year when you are not employed with the cars?—A. Since I took charge of this car we have been employed all the season round.

Q. I had in mind the taking of spawn. Of course, that is at a certain season, but the car-service extends through the year?—A. Yes, sir; the past two years we have been gathering native indigenous fish in the Mississippi Valley, and that has extended our work very much.

Q. Do you consider that a valuable branch of the work of the Commission?—A. I think it one of the most valuable that we have.

Q. You gather them where they are to be procured and distribute them in the streams and waters of that region?—A. All throughout the country where the waters are adapted to those kinds of fish.

Q. If you have any criticisms to make you may do so.—A. As far as I know everything is conducted right, and I have no complaint to make at all.

TESTIMONY OF Z. V. HARRIS.

Z. V. HARRIS, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where do you reside?—A. Washington. My home is in North Carolina.

Q. Have you ever been in the employ of the United States Fish Commission?—A. Yes, sir.

Q. Are you now?—A. No, sir.

Q. When did you enter it?—A. I think it was on the 3d of April, 1888.

Q. When did you leave it?—A. On the 1st of June.

Q. What were your duties during that time?—A. I was at the developing station at Fort Washington. My duties were to develop the shad eggs as brought in and ship them to this city, the Central Station.

Q. Who was in charge of the station at the time you were there?—
A. S. G. Worth.

Q. What do you say as to Mr. Worth's habits; is he an intemperate man?—A. He is a drinking man.

Q. Have you ever seen him under the influence of liquor?—A. I have.

Q. On more than one occasion?—A. Yes, sir; I have.

Q. So that he was incapacitated for attending to his duties?—A. He was not at the station; he was up at his house all the time, which was about a half a mile away.

Q. Upon the hill?—A. Yes, sir. He came down to the station afterwards.

By Senator SQUIRE:

Q. For how long a period was he incapacitated for the performance of his duties?—A. Some days he would be at the house and would not come down to the station in two or three days.

By the CHAIRMAN:

Q. You say he was intoxicated?—A. Oh, yes, sir; he was drunk.

Q. You saw him at his house?—A. I saw him when he got off the boat and came up the hill. I have seen him down to the station drunk, under the influence of whisky.

Q. You spoke of his getting off of the boat. On what occasion was that?—A. He generally went every time. He would take the fish that were caught by seine in a little steam launch and tow them to Washington here, and this was on one occasion when he was returning.

Q. What time of the day was that?—A. It was in the afternoon. That was one time, and one time he came back very early in the morning. He went up about 2 o'clock in the morning and came back about 7.

Q. He was intoxicated on both of those occasions?—A. He was, sir.

Q. Were there any other employes there who indulged in the use of ardent spirits?—A. They would take a drink occasionally; they were never drunk.

Q. He was the only man at the station you have ever seen drunk?—
A. The only one whom I have ever seen drunk at the station.

Q. Why did you leave the employment of the Commission?

The WITNESS. Senator, can I explain that in my own way?

The CHAIRMAN. Certainly.

A. I received a letter when I was home, in North Carolina, from Senator Ransom—the letter is on file in the Fish Commission now—saying that he had secured for me in the United States Fish Commission a permanent position. I came on here, and gave that letter to Mr. S. G. Worth here at Washington. He put me to work here in Washington and I worked about ten days. He then sent me to Fort Washington. He read this letter. He came to me soon afterwards, about the latter part of May, and told me he had been wanting to speak to me about my position; that it was not permanent. I then asked him the question why he did not say so when he read Senator Ransom's letter, and he made some reply. I have forgotten the reply he made to me. So I was discharged by Mr. Worth.

Q. Were you discharged at the close of the season's business?—A. Yes, sir; at the close of the season's business.

Q. You remained through that season?—A. Yes, sir; I remained through that season.

By Senator SQUIRE:

Q. How long were you there?—A. From April, I think it was either

the 5th or 6th—between the 3d and 7th—until the 1st of June—about two months.

By the CHAIRMAN:

Q. Can you give us the names of any other persons who were employed at the station during the time you were there?—A. Mr. John Paul Bauer, Capt. L. Harron, a Mr. Morgan, a Mr. Spencer. The other gentlemen I have forgotten; there were several other men. I have forgotten their names.

Q. Did you apply to Commissioner McDonald for retention in the service?—A. No, sir; I did not. Senator Ransom went down to see him in my behalf.

By Senator SQUIRE:

Q. Colonel McDonald was the then Commissioner?—A. Yes, sir.

By the CHAIRMAN:

Q. Do you know what he told Senator Ransom?—A. I do not. My father wrote to Mr. Worth asking why I was discharged, and he gave as the reason why that there were too many North Carolinians in the Fish Commission.

Q. Do you know what was done with the fish taken there?—A. They were taken for the spawn.

Q. What did they do with the fish?—A. They sold them.

Q. They sold them in Washington?—A. Yes, sir.

Q. Do you know what was done with the money received from the sale of the fish?—A. I do not. I have heard, but I do not know myself.

By Senator SQUIRE:

Q. Do you know of any instance where it was expended for liquor?—A. I have only heard; I do not know.

By the CHAIRMAN:

Q. You have never been employed at the Central Station here?—A. Only for the ten days I have mentioned.

By Senator SQUIRE:

Q. Was it customary to have liquor around?

The WITNESS. Around the Central Station?

Senator SQUIRE. Yes, sir.

A. I never saw any there.

Q. How about Fort Washington?—A. Yes, sir.

Q. Will you state a little more fully about liquor being around there? What do you mean?—A. I mean this, that if a man felt like taking a drink that he could take it. I have taken a drink there myself.

Q. He helped himself?—A. Yes, sir.

By the CHAIRMAN:

Q. Do you mean it was supplied to the men?—A. No, sir.

Q. Do you know of any liquor being kept by any one connected with the Fish Commission for sale?—A. No, sir.

Q. The men kept it in a flask for themselves?—A. Yes, sir. Being in the water so much, it was beneficial to take a drink.

By Senator SQUIRE:

Q. The question in my mind was merely with reference to the liquor that was alleged to have been bought with the money procured from

the sale of fish; whether that liquor was kept accessible to the hands, if there were any such liquor. Aside from any liquor there might have been kept by the men personally, was there any liquor for the hands so that the hands were supplied?—A. No, sir.

By the CHAIRMAN:

Q. You say you took a drink occasionally?—A. Yes, sir.

By Senator SQUIRE:

Q. Where did you get it?—A. On the steamer *W. W. Corcoran*.

By the CHAIRMAN:

Q. It touches there?—A. Yes, sir. I would like to explain why I took it. I am not a drinking man. Being in the water handling eggs, in the mornings my hands would be so cramped that my whole system would be chilled, and at times working late at night, from 7 in the morning until 2 in the morning, working sometimes on Sunday also, I felt it would do me good. I took it more as medicine than anything else.

Q. To brace you up?—A. Yes, sir.

Q. State in a general way how the work was conducted at the station; whether it was systematically conducted and well done, or otherwise, while you were there.

The WITNESS. In the station?

The CHAIRMAN. The operations of the seine and the general operations.

A. There were two of us in the station, Mr. Morgan and myself. We received the eggs as they were brought in by the spawn-takers. Then we began to develop them. We would get them like to-day and to-morrow we would ship them to Washington. Only two of us worked at the station at that time.

Q. You took good care of the spawn brought in and shipped the eggs in proper condition to the Central Station?—A. Yes, sir. Mr. Morgan was in charge.

Q. I will read you the resolution under which we are proceeding, and then ask you to give us any information which you have not already given touching these points. The resolution reads:

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's office, and especially in respect of the changes in the force, compensation paid to employes, and any alleged favoritism or other undue administration, and report to the Senate thereon.

Now, that indicates the general scope of our inquiry. If you have any knowledge touching any of these matters we would be glad to have you give it to us.—A. I have only my own case; that is, being promised a permanent position.

By Senator SQUIRE:

Q. What was your salary?—A. Forty-five dollars a month.

Q. There was no change in your wages during the time you were there?—A. No, sir.

Q. Were you satisfied?—A. No, sir.

By the CHAIRMAN:

Q. Was the salary of other men who did the same work the same?—A. Some of them were in there longer than I was and received more money, but I did not think it was enough for the amount of work I was doing, the number of hours and Sundays, too, that I worked.

By Senator SQUIRE:

Q. Did you make application for an increase?—A. No, sir; I did not. I was going to make application on the 1st of June, but I was discharged.

By the CHAIRMAN:

Q. You say you were promised a permanent position. Who promised you a permanent position?—A. This letter that I referred you to from Senator Ransom, telling me to come on to Washington, that he had secured me a permanent position.

By Senator SQUIRE:

Q. It was made to him. You took it for granted that what he said was correct?—A. Yes, sir.

By the CHAIRMAN:

Q. Do you know who made the promise to Senator Ransom?—A. No, sir; I do not.

Q. Can you give us any information which we have not been able to bring out?—A. That is all I can remember.

At 12 o'clock and 30 minutes p. m. the subcommittee adjourned until to-morrow at 10 o'clock a. m.

WASHINGTON, D. C., *July 11, 1890.*

The subcommittee met at 10 o'clock a. m., pursuant to adjournment.
Present: Senators Stockbridge (chairman) and Squire.

TESTIMONY OF HARRY E. QUINN.

HARRY E. QUINN, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. Harry E. Quinn.

Q. Where do you reside?—A. My temporary residence is Washington. I am a citizen of Trenton, N. J.

Q. Are you in the service of the Fish Commission?—A. No, sir; I severed my connection with the Fish Commission when Professor Baird died.

Q. You were in the service before that?—A. On a detail from the Navy Department for about a month or so for each year, for about ten years.

Q. In what branch of the service?—A. Distribution.

Q. Have you known anything of the administration and conduct of the Commission since you left?—A. Absolutely nothing. I wondered why they sent for me. My connection with the Fish Commission ended with the death of Professor Baird.

Q. You have no knowledge of its operations?—A. Nothing. I have heard a great deal, but that is not testimony.

Q. Are you acquainted with the present Commissioner?—A. Oh, yes, sir; I knew him when he was in charge of distribution, under Professor Baird's administration. I knew him in that capacity and was with him and served under him.

Q. Do you know what his reputation is as a fish-culturist.—A. Excellent, as I understand. I have no doubt he is the best in the country, one of the best at least.

Q. That is his general reputation.—A. Yes, sir.

Q. I will read you the resolution under which this inquiry is proceeding, and then I will ask you to state in your own way anything that you think comes within its scope.

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's Office, and especially in respect in the changes of the force, compensation paid to employés, and any alleged favoritism or other undue administration, and to report to the Senate thereon.

A. There is only one point that I could touch on. He did show partiality toward the South in appointments. His appointments are mostly from the South. That I can swear to. I know that is a fact. That is a point I am sure of.

Q. You mean appointments by the present Commissioner?—A. Yes, sir; Colonel McDonald. They are largely, or in the majority, from the South.

Q. Do you know as to the efficiency and competency of the appointees for the positions to which they were appointed?—A. They were perfectly competent, some of them the very best, having great experience and running all through the knowledge of fish-culture business ever since 1875, in its infancy and when it was started.

TESTIMONY OF W. E. STEWART.

W. E. STEWART, being duly sworn and examined, testified as follows:

By the Chairman:

Q. What is your name?—A. W. E. Stewart.

Q. Are you in the employ of the Fish Commission?—A. Just to a small extent. I was requested by the colonel to take temperatures of water and to report the daily arrivals of fish at the river front, Eleventh street wharf, right there at the headquarters; that is all. All the shad and herring arrive at one wharf, and I was requested by the colonel to take the temperature daily and report daily the arrivals of fish, so as to keep him posted as to the catch.

Q. Do you know anything about what is done with the fish taken at Fort Washington?—A. I sell the fish. That is my business. I am a fish commission merchant.

Q. Of course, they are taken for the spawn, and then all the fish taken there are sent to the market and sold?—A. Yes, sir.

Q. Do you know where the money goes?—A. They generally send a little manifest, a small piece of paper, a manifest for so many shad and the few herring they catch there, and I sell the fish and return the money by the captain or the party who brings the fish.

Q. To the station?—A. Yes, sir.

Q. Do you know what is done with that money?—A. No, sir; that is beyond me.

Q. Have you been at the Fort Washington Station during the last two years?—A. No, sir; my business requires my presence at the wharf from daylight until dark during the fishing season.

Q. It has been charged that there was a good deal of intemperance down there, that the officer in charge and his assistants made pretty

free use of liquor. Do you know anything about that?—A. No, sir; I do not know anything about that. There must be somebody who was doing the fishing—the fish which they sent to market. Their catch was about as good as you could expect. That came regularly. So whoever was fishing was not indulging to a very great extent, I judge, from the arrivals of fish.

Q. Do you know anything about the appointments which have been made in the Fish Commission by the present Commissioner?—A. Not at all. I do not know anything about it at all.

Q. You do not know anything about the rules and conduct of the station?—A. Nothing whatever.

Q. Do you know Mr. Worth?—A. I know Mr. Worth.

Q. Do you consider him an intemperate man?—A. Not at all. I never saw him under the influence of liquor in my life. I never saw him even taste a drop of liquor in my life, so far as my connection goes. I have known him for the last two or three years, from the fact of his being stationed there at the Fort and sending fish to me to sell. He generally sees me before the season starts in and asks me to make some arrangements and have facilities for bringing the fish to market in as good condition as possible, and asks for a little information about how the catch is, etc. That is about as far as our connection ever went.

Q. We are proceeding under a resolution of the Senate, which I will read you.

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's Office, and especially in respect of the changes in the force, compensation paid to employés, and any alleged favoritism or other undue administration, and report to the Senate thereon.

Now, that is what we are instructed to inquire into. If you have any knowledge on any of these points, as to changes in the office, dropping out of former employés, employing new ones, as to any favoritism on the part of the Commissioner towards any employés, or anything of that sort, if you will state it to us, we will be obliged to you.—A. I do not know anything about it. I do not know of any favoritism which has been shown; in fact I know nothing about his appointments or removals, or anything of that sort. I am very well acquainted with the colonel. I have been in the fish business all my life, and generally furnish him information.

Q. Among men who understand fish matters and know about such things, what is the reputation of Colonel McDonald as a fish-culturist?—A. First rate. I have never heard him spoken of otherwise. He stands first rate. He seems to know, and to know exactly, what he is doing.

TESTIMONY OF L. E. HARRON, Recalled.

L. E. HARRON, being recalled, testified as follows:

By the CHAIRMAN:

Q. You are connected with the Fish Commission?—A. Yes, sir.

Q. What are your duties?—A. I have been doing various jobs.

Q. Have you been at the Fort Washington Station during the last year?—A. Yes, sir; for the last six seasons.

Q. During the catching season?—A. Yes, sir; during the fishing season.

Q. Do you know, then, Mr. S. G. Worth?—A. Yes, sir.

Q. Do you know whether Mr. Worth is an intemperate man or not?—

A. No, sir; I do not think he is. I think that I can safely say that he is not.

Q. How long has he been there?—A. I was under him three years.

Q. Have you ever seen him intoxicated during these three years?—

A. No, sir; not the slightest.

Q. If Mr. Worth had been an intemperate man during the last three years, you having been on the ground, would you have been apt to have discovered it and known of it?—A. I should think so. I saw him every day.

Q. And you have never seen him under the influence of liquor?—A. No, sir.

Q. It has been testified here that upon one occasion, when they had an unusual run of fish, I reckon herring, and he made two trips—it was a bad, wet day, and he was out pretty late at night—that when he came back he was intoxicated.—A. I only know from hearsay. I was in bed when the launch came down on that occasion, and I did not see any of them at all.

Q. Have you ever known of his remaining at his house from one to three days because he was on a spree?—A. No, sir; I have not. I know of one occasion when he was there sick two or three days.

Q. Do you know he was sick?—A. I was in his room and saw him. He was taking medicine, and he did not look like a drunken man to me.

Q. Generally, were the men employed there in the habit of having liquor and using it?—A. I did not see any of it, but I suppose some of the men if they felt like taking a drink of whisky did so.

Q. If they use it at all, how can they get it?—A. From the steam-boat that makes a landing at the wharf.

Q. There are steam-boats with bars on board which land at the wharf? A. Yes, sir.

Q. And the men, if they wanted to use liquor, could get it on the steam-boats?—A. It was on sale there, but if there was drunkenness or disorder or anything around the place I never saw it.

Q. Your duties were right down at the station?—A. Yes, sir; at the seine.

Q. What were your particular duties?—A. I was in charge of the seine.

Q. You were captain of the seine?—A. Yes, sir.

Q. You were before the committee before. Did I ask you as to the money received for the sale of the fish?—A. The fish are sold and the money used to pay the expense of running the seine.

Q. Do you know whether the money was applied for that purpose?—A. I know that the seine haulers are paid out of it.

Q. Do you know whether the amount received from the sale of the fish for the last two or three years has been sufficient to pay the seine haulers?—A. I think it has, with the exception of this last season. I do not think we made quite enough money out of the fish this last spring, on account of its being a bad season.

Q. Still the men were paid?—A. Yes, sir. I do not think there was much difference. I think that we were nearly about even.

Q. By whom were you employed when you first entered the service of the Commission? Was it during Professor Baird's administration?—A. Yes, sir. Mr. Carswell had charge of the station at the time.

Q. As to the wages paid yourself and the men employed in hauling the seine, are you and they paid more or less than when you first entered the service?—A. Paid the same. The seine haulers get \$1 a day and board themselves out of that. They do not really get enough.

Q. But they are paid the same as they were paid when you first entered the service?—A. Yes, sir.

Q. Has it been increased since Colonel McDonald took charge?

The WITNESS. Since Colonel McDonald has been Commissioner?

The CHAIRMAN. Yes, sir.

A. No, sir; not a dollar.

Q. Is there any person at Fort Washington who is connected with the Fish Commission in any way who keeps liquor for sale to the men?—

A. No, sir. Such a thing, I can safely swear, has never been the case at that place.

Q. Do you know the sergeant in charge of the fort?—A. I am well acquainted with him.

Q. Do you know whether he keeps liquor and sells it to the men there?—A. No, sir; he does not.

Q. I will read you the resolution under which we are proceeding:

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's office, and especially in respect of the changes in the force, compensation paid to employés, and any alleged favoritism or other undue administration, and report to the Senate thereon.

Now if you have any knowledge on any of those subjects which I have not drawn out by questions I will be glad to have you state it in your own way.—A. So far as the running of the Commission is concerned I think that Colonel McDonald certainly has done the very best he can, as well as anybody can. I have been in the Commission a good long time.

Q. Are the affairs conducted in a business-like way?—A. Yes, sir; all the way through, and he seems to devote his whole time and attention to the work.

Q. Do you know of any favoritism or of Commissioner McDonald having any pets who have soft places?—A. No, sir; I do not. He seems to try to have the men under him take an interest in the work and attend to the work, and as to whisky drinking and disorder and one thing and another, I know that he has always been bitterly opposed to it.

Q. And there is nothing of it at Fort Washington?—A. No, sir; I know that he gave me orders that if the colored seine-haulers got drunk to discharge them right away, which I never had to do. I never had any trouble with them at all.

Q. Do you know Mr. Harris, who was employed there for a short time—I think during one fishing season?—A. Yes, sir; I think he was there last season a year ago.

Q. What position did he fill?—A. I think he worked in the hatching house.

Q. Do you know as to his habits, whether he was a temperance man, or otherwise?—A. No, sir; I do not.

Q. He testified yesterday that he was wet more or less and that he bought whisky from the steamers there from time to time and took a little drink of whisky now and then himself.—A. Probably he did.

Q. But you never noticed any effect from it?—A. No, sir.

Q. He testified that on one occasion Mr. Worth was intoxicated and remained at his house for two or three days. What do you say on that point?—A. I saw Mr. Worth every day and never saw him under the influence of liquor. On the occasion of which you have spoken I was in there and saw him on business and found him upstairs in bed taking medicine. Bottles of medicine stood on the mantel-piece.

Q. Do you know of Harris going to the house to see him during that time?—A. No, sir. Probably he did, but not to my knowledge.

Q. Do you know why Mr. Harris left the employment of the Commission?—A. I suppose because they did not have work for him.

Q. He was retained through the fishing season?—A. Yes, sir; and at the end of the season he was put off, which is done every season with employés who are taken on for the season's work. They are put off as soon as it is over, because there is nothing more for them to do. I could tell you something about the seine, if you wish to know anything about it.

The CHAIRMAN. You can do so.

The WITNESS. In the last three years this seine has gotten about 50,000,000 of spawn, which have cost the Government about \$22 or \$23 a million. Other spawn gotten from the river, from the gillers, have cost the Government about \$80 or \$85 a million. There is the difference between the seine that we run at Fort Washington and the cost of the eggs gotten from the balance of the fishermen.

Q. So that you think that the operating of the seine at Fort Washington is a good business operation in connection with the Commission?—A. Yes, sir, undoubtedly. It almost sustains itself. Of course we have got to have a little tackle and have got to get a seine in the first place, which lasts about five years and probably costs between four and five hundred dollars, and with that seine you could catch seventy-five or eighty-five millions of spawn or more.

Q. The operating is paid for by the fish taken?—A. Yes, sir. The cost of twenty-two or twenty-three dollars a million includes the outfit; the seine, tackle, and all that.

Q. It includes the entire cost?—A. Yes, sir; my wages, and so on.

TESTIMONY OF MERWIN M. SNELL.

MERWIN M. SNELL, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your full name?—A. Merwin M. Snell.

Q. Where do you reside?—A. In Washington.

Q. Are you connected with the United States Fish Commission?—A. I am not at the present time.

Q. Have you been in the past?—A. I was connected with the Fish Commission from January 3, 1881, until about the middle of February of the present year—about ten years.

Q. You were appointed by Professor Baird?—A. Yes, sir; under his administration.

Q. What position did you occupy there?—A. I was at first secretary to Mr. R. Edward Earle, who was in charge of the statistical work, a certain branch of the statistical work, and after I became more familiar with the work I was one of the fisheries experts, as they call them, who go out into the field and investigate personally the fisheries of the different places on the coast, and write up reports on the fisheries.

Q. What was your compensation when you entered the service?—A. It was, if I am not mistaken, \$30. If I am not mistaken, I went in under Mr. Earle at \$30.

Q. Was it increased?—A. In about two months to \$50. I worked at \$50, although Mr. Earle and the other superior officers assured me that it ought to be a hundred and that they hoped soon to increase it, until,

I think something like two years ago, when it was increased to \$60, and then to \$75.

Q. Was this last increase to \$75 after Commissioner McDonald came in charge?—A. It was. I applied for the increase, as I had been promised years before a greater one than that, and I asked at this particular time for this particular increase, saying that I had been promised an increase a great many times.

Q. Was that increase made upon the ground that your duties were increased?—A. No, simply that they could afford it.

Q. Because you became valuable?—A. No, sir. They had recognized after the first three or four years, in fact they recognized all the time, and they kept telling me, that they knew I ought to have more, but they did not have money enough; that they could not spare the money to give higher salaries. All the clerks in the division of statistical inquiry are and have been getting since I have known anything about them not half, hardly, what they get in other departments of the Government for inferior classes of work.

Q. You do not consider this increase in your compensation which was made by Colonel McDonald as too large?—A. No, sir; I consider it was not. There was no change in my duties at that time. I had been doing exactly the same thing that I had been doing for years back. I had been told years before that I ought to have a hundred dollars a month.

Q. So that you did not consider your increase as excessive?—A. Not at all.

Q. It was not due to any special favoritism on the part of the commissioner?—A. No, sir; not by any means.

Q. It has been charged that he has his pets.—A. I was certainly not one of his pets. I never saw any evidence of that.

Q. Why did you leave the employment of the Commission?—A. Because I received another appointment, which was far better and more satisfactory.

Q. Did you ever have any personal difficulty or misunderstanding with the present Commissioner?—A. Well, I considered that in various respects I had not been well treated, and we had some little correspondence which had some feeling in it. I had some feeling of hostility to the authorities of the Commission, not personally, but in their official capacity, on account of official relations between them and myself. I did not consider that I had been treated justly and I wrote him to that effect.

Q. Do you know of any relatives of Commissioner McDonald or family connections who have been appointed by him to office?—A. No, sir; I do not.

Q. It has been stated, as I said before, that the Commissioner has his favorites and pets there, whom he favors at the expense of others, who are equally competent?—A. I have no reason to suppose that it is so.

Q. While you were there, what was the custom as to the regularity of attendance of employés, did they come in at the regular hour and remain until the proper hour of closing?—A. I think that there was a great deal of difference in the offices. In the office I was in there was a great deal of difference for different periods of work. As a rule, the understanding in the Commission was that people should take a personal interest in the work, that they were not compelled to be present at any particular hour in the morning, at least that was the case in my division, and neither were they supposed to hurry off at a particular

hour in the afternoon for closing. When I first went into the Commission, I suppose usually, on the average, I did not get there until something like half-past nine. The first few years I was in the Commission I was expected really to do several hours' work after time, and frequently worked in the evening and oftentimes outside of the regular hours during the day. That was the case with me. My superior worked even a greater number of hours than I did. That was generally the case in those days.

Q. In that Department?—A. Yes, sir; every one in the office worked more than eight hours, I think, although they were not required to be there at exactly 9 in the morning.

Q. But they put in full time?—A. They put in more time. During the last part of the time I was there it was not the case that they put in more hours, but it was not particular that they should come there just at 9.

Q. Have you any knowledge of any appointments being made by Commissioner McDonald upon political grounds?—A. I know of only one.

Q. Who was that?—A. A certain Mr. Martin, the only appointee I ever knew of in the Commission who did not seem to be kept on the ground of capacity or fitness for the work.

Q. What position did he occupy?—A. He was a clerk in the division of fisheries when I first came in contact with him. Prior to that time he was in some other branch of the Commission work.

Q. Do you know what State he was from?—A. I do not. He was there through the influence of Attorney-General Garland. I do not know where he was from.

Q. He was appointed by Colonel McDonald?—A. Yes, sir. I think the time I first knew him it was in the Colonel's administration. He was addicted to drunkenness and used to be away a great deal on that account. He was generally considered to be incompetent in several respects.

Q. Was he in the service of the Commission when you left?—A. He had been receiving when he was in that position \$60 a month. I was receiving then \$60 a month, too. There were two or three clerks in the office who were familiar with the work and who were experienced in the work, and who were twice as experienced as he was who got only \$50.

Q. Why did he leave the Commission?—A. He left on account of incapacity.

Q. Was he discharged?—A. Yes, sir; by Colonel McDonald, but on the recommendation or request of the chief of the division. But at the time he was given a month's extra pay ahead, although that has not been done in a great many other cases of persons who were men who had a good record in the service. That is the only instance that I know of. That is the only instance that I have any knowledge of.

Q. What can you say—you were in the Commission before Colonel McDonald came in?—A. Long before.

Q. And you were there for a year and a half or so afterwards. Now, what can you say as to the general administration of the office, the methods and system of business under Colonel McDonald, as compared with the former period?—A. Well, I do not know that I can say anything very definite about that. I have nothing more than a general impression.

Q. Was there any marked change in the manner of administration?—A. Yes, sir; and in this particular, that Colonel McDonald is a specialist

in propagation and that branch of the work, and consequently that branch of the work received greater attention after he came in, which is perfectly natural under the circumstances. Professor Baird was more of a scientific man and he was more inclined to divide attention between the three branches of work. I do not know that I would be willing to swear that that is actually the case. That is my impression, that the work of propagation received greater attention after Colonel McDonald came in.

Q. After Colonel McDonald came in was there a competent person in charge of the division of statistical inquiry?—A. I think the same gentleman remained, Mr. Rathbun, who is perfectly competent.

Q. He conducted his branch of inquiry with considerable independence, I suppose?—A. Yes, sir; that is the case, and so with the division of fisheries, in which I was. Professor Baird gave much attention to details, but since the colonel has been in this division of fisheries has not been in a very definite and satisfactory condition, because it was placed under Captain Collins, who already is in charge of another branch of the work, and who is not specially familiar with this branch of the work, in fact not at all, but here was under him a sort of chief clerk who was familiar with the work, and he conducted the work, although he was not the chief theoretically.

Q. Do you think that owing to the fact that Colonel McDonald gave attention to practical propagation of fish the scientific branches of the inquiry suffered?—A. I doubt if they did. I do not think they did.

Q. They went along in their proper channel, and he just gave more personal attention to his branch?—A. Yes, sir. I think the authority for that branch is in him, and he has enlarged the scope of that work without decreasing the scope of the other work. I do not think that there was impaired efficiency in the other branches of the work.

Q. From along about the time of Professor Baird's death up to now, has the work of the Commission increased within your knowledge; have there been additional hatcheries established, and has the work been extended and expanded?—A. Yes, sir; considerably.

Q. That would lead necessarily to an increase in the total force?—A. Yes, sir; certainly.

Q. Do you know of any undue increase in the force—that is, were persons appointed simply because the Commissioner desired to appoint them when they were not really essential to the progress of the work of the Commission?—A. I have no knowledge of any such case, and I am very certain, from what I know of the Commissioner, that he has a personal interest in the work which would not allow him to sacrifice efficiency for any ground. I really know very little regarding the personnel of propagation, and the additions which would come by this extension of the work would come mostly outside of Washington at other places where hatcheries were, and would not be under my observation, although I hear sometimes from one of the hatcheries and know if people come from the hatcheries, and I never heard of any such case.

Q. Did you ever have occasion to visit any of the hatcheries?—A. Yes, sir.

Q. Which ones?—A. I have visited Northville, Mich.; I have visited Wood's Holl. I do not know that you call that a hatchery; it is a station.

Q. Have you ever visited Battery Island?—A. I have visited that. There are no more that occur to me now.

Q. You never were at the Leadville hatchery?—A. No, sir; that is a new one.

Q. And the Put-in Bay Station, on Lake Erie?—A. No, sir.

Q. Are you acquainted with Mr. Blaisdell?—A. I think I knew him to speak to, but I would not know him by sight now. I do not know which one it is. I knew him very slightly.

Q. He was there awhile and left. Do you know anything about his competency?—A. I know nothing about it.

Q. I will read you the resolution under which this inquiry is proceeding:

Resolved, That the Committee on Fisheries be, and it is hereby, instructed to make early inquiry into the administration of the affairs of the United States Fish Commissioner's Office, and especially in respect to the changes in the force, compensation paid to employes, and any alleged favoritism or other undue administration, and to report to the Senate thereon.

That is the resolution of inquiry under which we are proceeding. If you know anything in regard to any of the points involved in the resolution which I have not drawn out by questions, please state it in your own way what it is. We want to find out, generally, whether the affairs of the Commission are well and properly conducted or not. If you know anything touching those points, please give it to us in your own way.—A. I have already seen in the papers the wording of the resolution; I have seen nothing to justify any of those charges. The arrangement of the salaries has always been very unjust, but not on account of any favoritism. It has been purely on account of a desire to economize, and they would always get every man for as little as they could. If they could get a good man for a high class of work cheaply they would get him as cheaply as possible, and they would not pay him a cent more than they had to. Sometimes men doing a high class of work would be paid less than they ought to be.

Q. Do you think that has occurred to any greater extent under Colonel McDonald than in former years?—A. Not at all. There was a tendency to remedy the state of affairs; there was a tendency to equalize things. There has been a great deal of talk about it, and it was announced as Colonel McDonald's intention, as soon as he was able, as the appropriation permitted him, to form a schedule and reorganize it and make the salaries perfectly fair.

Q. Within economical limits?—A. Yes, sir; but the idea was to graduate them, so that people doing a higher class of work would get a higher salary. There were some moves made in the direction of equalization. It was in connection with that that an increase in my salary was made. The salaries of several people, whom they had recognized as capable and who ought to be getting twice as much as they were, were increased at the same time.

Q. Do you think that that is a wise policy?—A. Yes, sir. There was always a great deal of discontent. The tendency was to retrench everywhere. That was the idea. But my opinion on the general subject, which I have frequently expressed, is that I do not know of any department of the Government, so far as my knowledge of it goes, where everything has been conducted on a more strictly business principle than there. It has been the rule, to which there has been no exception, except that one case that I know of, that no one has been appointed except because it was thought he could do the work, and whenever a man has been put out it has only been because he could not do the work. The removals were only on business principles.

Q. It has never been run as a political machine?—A. Never. There was nothing of the sort at all under Professor Baird, and since the colonel came in there has been but one instance which I have heard of. I have heard rumors of others, but have not heard anything to justify them.

TESTIMONY OF R. E. LEWIS, Recalled.

R. E. LEWIS, being recalled, testified as follows :

By the CHAIRMAN :

Q. Were you stationed at the Fort Washington Station ?—A. Yes, sir ; last spring.

Q. During the last fishing season ?—A. Yes, sir.

Q. I want to ask you some questions as to your knowledge of the use of intoxicating drinks by the employés at that station.—A. Well, sir, aside from when the Mt. Vernon boat stops there to get off the mail—it generally comes down, well, about a quarter after 11, and then goes back at half-past 2 in the evening—I have seen men go to the boat and get a bottle of beer ; just buy it from the bar room——

Q. Have you ever seen them get any whisky ?—A. Yes, sir ; not this year.

Q. Have you ever seen any employés there under the influence of liquor, so as to interfere with the performance of their duties ?—A. Never in my life. I never saw any of the employés on the reservation under the influence of liquor.

Q. I want to ask you particularly about Mr. Worth. Did you ever know of Mr. Worth being intoxicated while on duty there ?—A. Never, sir.

Q. Did you ever know of his being on a prolonged spree for two or three days at his house, so that he did not come down to the station at all ?—A. I never heard of it at all.

Q. During this last season do you remember that Mr. Worth was sick at his house and was away from the station for two or three days ?

The WITNESS. At his house ?

The CHAIRMAN. That he was sick at his house. Do you know of his being sick and confined to his house there for two or three days ?

A. No, sir ; I have seen him every day.

Q. Did anybody connected with the work of the Commission there ever keep any liquor or beer for sale to the men ?—A. No, sir.

Q. All the liquor, beer, or other beverages which they procured they got themselves by going onto this Mt. Vernon boat as it stopped at the dock ?—A. Yes, sir ; or, probably, a man would get permission to come up to Washington on business, or something of that sort. They might, if they had any whisky, have got it there. There is no place where they can buy it around the fort.

Q. You have never seen the men who are at work there on the seine or connected with other parts of the business incapacitated for doing their duty in consequence of drinking ?—A. Never, sir. I omitted when before the committee the other day to give you all of my past history in connection with the Fish Commission. Besides what I told you, I was a messenger on the *Corcoran*, shipping eggs from Fort Washington up here. That was season before this last season, the season of 1889. During that period I took my meals at Mr. Worth's house almost every day. I do not remember a single exception—that is week days.

Q. At noon ?—A. Yes, sir ; I took my dinner there.

Q. Was it Mr. Worth's habit to take a drink at noon ?—A. I never saw him take a drink at that time, or at any other time.

Q. Do you know Mr. Harris, who was employed for one season down at that hatchery ?—A. There are two Mr. Harrises.

Q. Z. V. Harris?—A. Yes, sir; I know him.

Q. He was employed during one fishing season?—A. He was there the season that I was on the *Corcoran* shipping eggs from Fort Washington to Washington.

Q. Do you know anything about his habits?—A. I know nothing; all I know of him is from just seeing him every day at his work. He seemed to be attending to his work; he was assistant in the hatchery there; he used to help me every day to put up the eggs.

Q. Do you know why he was dropped from the rolls?—A. No, sir; I do not, any further than that the men who are taken on at Fort Washington are simply temporary employés.

Q. When the season was over he and the others were dropped?—A. It is understood that their services are no longer required. That is all I know.

Q. During the term of your service at Fort Washington and the year that you were on the *Corcoran*, did you ever see Mr. Worth—you saw him every day?—A. I think every day, sir.

Q. Without exception you think?—A. I do not remember of a single exception.

Q. During the term of your service at Fort Washington and the year you were on the *Corcoran*, did you ever see Mr. Worth under the influence of liquor?—A. Never.

Q. If he had been confined to his house two or three days in succession, would you have been apt to have noticed his absence?—A. I would have known it. Now the spring I was on the *Corcoran* he was sick, but I saw him every day.

Q. At his house?—A. I took dinner at his house.

Q. During the time he was sick?—A. Yes, sir; with his family.

Q. Have you any reason to believe that that sickness was really caused by excessive drinking instead of his being sick?—A. No, sir. When I say that I think I saw him every day, that is as far as I can remember. He might have been confined to his bed a day or two, probably he was, but I just paid no attention to it. I know he had a severe cold. That is as far as I could see was the cause of his sickness.

Q. You were on the *Corcoran* the season of 1889?—A. The summer of 1889.

Q. Was it during the summer of 1889 that he was sick for two or three days?—A. Yes, sir.

Q. You were at his house every day?—A. Yes, sir.

Q. And you had no reason to believe that he was on a spree instead of being sick?—A. No, sir; I never heard any allusion of that sort to him from any employé around the station.

TESTIMONY OF DANIEL MOORE.

DANIEL MOORE, being duly sworn and examined, testified as follows

By the CHAIRMAN:

Q. Where do you live?—A. I live at Virginia Avenue, 229½, Washington, D. C.

Q. When were you first employed by the Fish Commission?—A. Last summer regularly, the 10th of July.

Q. What work had you to do?—A. I had laboring work to do around the building.

Q. Around the Central Station?—A. Yes, sir. I cleaned up around there.

Q. What pay did you receive?—A. Thirty-five dollars.

Q. Were you at the Fort Washington Station during the shad season of 1888 and 1889 and 1890?—A. Yes, sir.

Q. Do you remember whether the launch *Blue Wing* was employed at Fort Washington in the work in 1888, 1889 and 1890?—A. Yes, sir.

Q. Did not launch No. 61 do the same work in 1889 and 1890 that the *Blue Wing* did in 1888?—A. Yes, sir.

Q. Did Mr. McDonald and his friends come to the station in 1889 and 1890 and have shad bakes, planked shad; that is, this summer a year ago?—A. Yes, sir.

Q. Did you ever see Mr. Gill and Mr. J. J. O'Conner and a party of gentlemen visit the station and have shad bakes?

The WITNESS. Did I ever see them have shad bakes?

The CHAIRMAN. Did Mr. Gill and Mr. O'Conner?

A. No, sir.

Q. Whom did you see there at a shad bake?—A. No one but the colonel, sir.

Q. When was that?—A. The colonel was down this summer, or the spring at least.

Q. Several times?—A. He was down there, yes, sir, several times.

Q. And each time had some friends with him, and they had planked shad, did they.—A. Yes, sir.

Q. Did you not get the shad for those occasions from Mr. Harron, who had charge of the fish seine?

The WITNESS. Did I?

The CHAIRMAN. Yes.

A. No, sir; I did not get the shad.

Q. Do you know whether the shad that were used were caught by the seine there?—A. I do not know, sir.

Q. Did you ever see anything to drink; that is, any whisky or wine, or anything on those occasions?—A. No, sir.

Q. Did the colonel have wine there when he had his friends down there.—A. No, sir; the strongest thing around there was lemonade.

Q. Coffee, perhaps?—A. Yes, sir.

Q. Did you ever purchase any whisky for Mr. Worth from the steamer *Corcoran*?—A. No, sir; I never did.

Q. Did you ever see Mr. Worth intoxicated at Fort Washington?—A. No, sir.

Q. Did you overhear the men talking about his drinking?—A. No, sir; I never heard them talk about it.

Q. Do you know Mr. Worth?—A. Yes, sir; I have known him for years.

Q. You never saw him drunk?—A. No, sir.

Q. Who employed you at Fort Washington?—A. Mr. Carswell.

Q. He was in charge before Mr. Worth was?—A. Yes, sir.

Q. When were you employed down there at Fort Washington?—A. I was first employed in 1885.

Q. Did Mr. Worth promise you the position you now hold? Did he promise you that you should have a position at the Central Station?—

A. Yes, sir.

Q. If so, how long before you received word to go to work there?—A. He promised me in April.

Q. When you were at work at Fort Washington?—A. Yes, sir. I

went to work on the 10th of July. I received a letter on the 9th to report at once.

Q. That you were to go to work at the Central station?—A. Yes, sir; and I came right up.

Q. What time of night did the launch usually return from down the river with shad-eggs?—A. Sometimes 11 o'clock and then again at 1 o'clock in the night, and as late as 2 o'clock.

Q. Do you remember if the launch was often used to tow the boat, the run boat, the boat that carried the fish to market, and what time would the launch generally get back from Washington? Did they use the launch to tow the boat with fish up to Washington?—A. That I do not remember.

Q. You do not know about that?—A. No, sir.

Q. Do you know what time the launch generally got back from Washington when she generally came up with fish?

The WITNESS. Do you mean at night?

The CHAIRMAN. Yes.

A. No, sir; I do not.

Q. Did you ever hear Mr. Lynch and others complain about their work when they worked night and day?

The WITNESS. Mr. Lynch?

The CHAIRMAN. Yes.

A. Yes, sir; I have heard him; he is the only man; I never heard anybody else.

Q. He complained that he had to work too much at night?—A. Yes, sir.

Q. Did Mr. Worth offer to sell you any pictures or photographs?

The WITNESS. Me?

The CHAIRMAN. Yes.

A. No, sir.

Q. Did you ever hear of Mr. Worth receiving money for shad bakes at Fort Washington?—A. No, sir.

Q. Was not the launch *Blue Wing* kept in Washington by Colonel McDonald as a pleasure boat in the years 1889 and 1890?—A. I do not know, sir.

Q. The *Blue Wing* is the little steam-launch?—A. Yes, sir.

Q. What did they use her for generally?—A. To go down the river and get the eggs.

Q. The gillers and the seine men?—A. Yes, sir.

Q. Did you ever see Mr. McDonald and his friends using her for pleasure purposes?—A. No, sir. When they came there they came on the *Corcoran*.

Q. When they came there they came on the *Corcoran*?—A. Yes, sir. It was the mail-boat.

Q. Was it your business to build Mr. Worth's fires and to wait upon him whenever requested to do so and to stop any work you might be doing for the Fish Commission. That is, were you taken off from your regular work to build Mr. Worth's fires and to wait upon him?—A. No, sir; not from my regular work.

Q. Did you wait upon Mr. Worth more or less at his house?—A. No, sir; I waited upon the mess.

Q. That was what you were doing there?—A. That was my work.

Q. You were not called upon by Mr. Worth to wait upon him especially?—A. No, sir.

Q. Did you ever hear the men complain about the way the mess was run by Mr. Worth?—A. Well, no, sir.

Q. What are your wages at the present time?—A. Thirty-five dollars a month.

Q. What were your wages at Fort Washington in connection with the mess there?

The WITNESS. This summer?

The CHAIRMAN. Yes.

A. Thirty-five dollars; the same price.

Q. What were you doing at Fort Washington after the season closed this year?—A. I did not stay there at all.

Q. You left when the fishing season was over?—A. Yes, sir.

Q. Did you help clean up Superintendent Worth's house after he left last year, in 1889?—A. Yes, sir.

Q. Did he pay you for doing it?—A. Yes, sir.

Q. Were there any whisky bottles and demijohns sitting around there?—A. No, sir.

Q. Do you know whether John Smith brought them to Washington to sell?—A. I do not, sir.

Q. Do you know John Smith?—A. Yes, sir; I board at his house.

Q. If he had brought a lot of whisky bottles and demijohns from Mr. Worth's house last year up here to sell would you be apt to know of it?—A. Certainly.

Q. You think you would?—A. Yes, sir.

Q. You do not know of any such thing?—A. No, sir.

Q. Did you ever hear the seine haulers complain that they were charged for fish?—A. No, sir; I never heard it at all.

Q. Did the seine haulers, as a matter of fact, get fish there?—A. They got fish; yes, sir.

Q. Do you know whether when they got fish they were charged to them or not?—A. I do not.

Q. You did not have anything to do with that?—A. No, sir.

Q. You were connected with the mess there?—Yes, sir.

Q. Did you ever know of Mr. Worth being at home two or three days at a time on a spree, claiming that he was sick?—A. No, sir.

Q. Do you consider Mr. Worth a drinking man?

The WITNESS. Do I?

The CHAIRMAN. Yes.

A. No, sir.

Q. If he was in the habit of drinking much would you have been apt to have seen it?—A. I certainly would, sir.

Q. Do you know anything as to who paid the expenses of the shad dinners that were given there by Colonel McDonald to his friends?—A. No, sir.

Q. When the colonel came down there, with any friends did he bring servants from his house, his cook, etc., down there to cook the shad?—A. He did, sir.

Q. Did his wife and daughter sometimes come down to help about it?—A. Yes, sir.

Q. You never saw any wine or whisky used on such occasions?—A. No, sir.

Q. Do you know anything at all about these dinners, beyond the fact that he had men there?

The WITNESS. Dinners?

The CHAIRMAN. Yes; when he brought friends down there to have planked shad. You simply know that he did sometimes have his friends there to have planked shad; but do you know who furnished the dinners? What else beside the shad was furnished from the mess, or did he bring it down there?

A. No, sir; it was not furnished from the mess, because his own box used to come down on the boat; he used to bring his own stuff down.

Q. And he never used anything from the mess?—A. No, sir.

Q. Can you give any idea as to how many times Colonel McDonald or any of the Fish Commission gave those planked shad dinners there?—

A. No, sir; that I can not tell.

Q. Many or few times?—A. Only a few times.

Q. How many would you say would cover it, eight or ten times?—A. Oh, no, sir; not near.

Q. Not so many?—A. No, sir.

Q. Four or five times?—A. Not as many as that.

Q. Two or three times?

The WITNESS. Do you mean during the fishing season?

The CHAIRMAN. Yes; when he would come down there with friends and have planked shad.

A. About two or three times.

Q. Did Mr. Worth ever give any shad bakes at Fort Washington?—

A. Not that I know of.

Q. Would you have been apt to have known it if he had?—A. I would.

Q. So that you think he could not have done it?—A. Not without my knowing it. He did not do it in my time.

Q. You were there two years?—A. Three years this last year gone.

Q. You never knew Mr. Worth to invite any friends there and give a planked shad dinner?—A. No, sir.

TESTIMONY OF WILLIAM T. COX.

WILLIAM T. COX, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. William T. Cox.

Q. Are you employed by the Fish Commission?—A. No, sir. I furnish them groceries and provisions for their mess.

Q. For the cars?—A. Yes, sir; for Fort Washington, and for the cars, too.

Q. Who makes those purchases?—A. Mr. Worth. I was speaking to the gentleman here (referring to Mr. Olds) about another gentleman.

Q. Did Mr. Worth make the purchases for the Fort Washington Station?—A. Yes, sir; and for the cars, too. Then the captains of the cars used to deal, too. There are three distinct books—three or four books at one time. For each car there is a book. There are three, I think, and then one for the mess.

Q. For the Fort Washington mess?—A. Yes, sir; and then Mr. Worth's family. Of course that is separate.

Q. During what period did you furnish the mess at the Fort Washington Station?—A. I furnished that station for about eight or ten months.

Q. This last summer?—A. No, sir; the summer previous.

Q. Eighteen hundred and eighty-nine?—A. Yes, sir; and then previous to that I furnished both the mess and the family for about two years. Then I had a partner, and the firm was Bean & Cox. But I individually have only served them for about eight or ten months.

Q. Your arrangement was made with whom?—A. Mr. Worth.

Q. Was there any side arrangement between you and Mr. Worth by which he was to derive any benefit from your furnishing these supplies?—A. No, sir. It was through Mr. Bean that I got Mr. Worth's trade. Mr. Bean was formerly employed by Mr. Cornwall, and Mr. Bean left Mr. Cornwall and he and I connected ourselves in business, and we catered for it and got it through the influence of Mr. Bean. So he dealt with us.

Q. I asked you whether, when this trade was given to you, any understanding was made between you and Mr. Worth by which he derived any benefit?—A. No, sir.

Q. He simply gave you the preference in the trade?—A. Yes, sir.

Q. Did you furnish the station at regular rates?—A. At cut rates.

Q. It is not your habit to charge them any more than any other people?—A. No, sir. I being convenient to the wharf, it was for that reason I got the preference, and for the low price. We were convenient to the steamer *Corcoran*.

Q. Do you know Mr. Worth personally?—A. Yes, sir.

Q. Do you know anything about his habits, whether he is temperate or not?—A. A temperate man.

Q. Do you keep liquors in your stock?—A. Well, we did when it was Bean & Cox.

Q. Do you furnish supplies to the cars?—A. The families and the mess and the cars.

Q. Have you ever furnished Mr. Worth with liquors?—A. I am not positive about that. I am not sure. Oh, I remember Catawba wine being sent, but I do not think he got anything strong.

Q. You do not know of furnishing him with whisky or brandy?—A. No, sir. He always was a temperate man. When he wrote for this Catawba he said for cooking.

Q. That is the cheaper grade, is it not?—A. Yes, sir.

Q. Did you ever see Mr. Worth under the influence of liquor?—A. No, sir.

Q. Have you seen him frequently during the last two years?—A. I have not seen him for a year.

Q. Do you know anything about the management of the Central Station here, as to the general conduct of the business there?—A. Well, I have a little conception, not much.

Q. You say you furnished the cars with supplies?—A. Yes, sir.

Q. Who made the requisitions?—A. The captains of the cars.

Q. Do you understand that these supplies are paid for by the Commission, or do they have a mess and pro rate the expense between the members of the mess on the car?—A. Now, about the cars, I have always understood that the captains would render an account; that is, they would receive a check. I have understood that the mess would share so much.

Q. They defrayed the expense between them?—A. Yes, sir; between them. All this escaped my memory, and for a moment I can not think.

Q. How often are your bills paid for the supplies furnished to the cars?—A. If the car stayed here, say thirty days, then they would be paid at the end. Sometimes they put in for two or three days only and pay before leaving. There is one car which went to Wood's Holl. They owed me a bill for, say, two months, not more.

Q. Was that paid subsequently?—A. Yes, sir; paid finally by writing for it once or twice.

Q. And among other things Mr. Worth sent for was Catawba wine, which he said was for cooking purposes, did he?—A. Yes, sir.

Q. Mr. Worth did not, by any arrangement with you, receive any discount or commission so that it resulted to his benefit?—A. No, sir. He always looked to the interest of the Commission. “Is that the best you can do,” he would say. “We will have to look around. We will have to buy with those who sell us at the lowest prices.” So he seemed to be in the interest of the Commission. To show you how careful he was about any bribing, he would even refuse a cigar at the end of the month when he paid his bill. He said, “O no, that is all right.”

At 12.30 o'clock p. m. the subcommittee took a recess until 3 o'clock p. m.

At the expiration of the recess the subcommittee resumed its session.

TESTIMONY OF ROBERT F. JOYCE.

ROBERT F. JOYCE, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. Robert F. Joyce.

Q. Where is your residence?—A. At Fort Washington.

Q. Are you connected with the Army?—A. Yes, sir.

Q. What is your position in the Army?—A. Ordnance-sergeant, U. S. Army.

Q. The Fish Commission have a station during the shad-catching season at Fort Washington?—A. They have for about two months.

Q. Who has been in charge there during the last two years?—A. Mr. Worth. I do not know his initials.

Q. He was there last year, too?—A. Yes, sir.

Q. You have occasion to see him often?—A. Every day in his office and in his dwelling. His family and mine are rather intimate. He has his quarters down there.

Q. What do you say as to Mr. Worth's habits, is he an intemperate man?—A. I never saw him drink a glass of whisky in my life.

Q. You never saw him intoxicated?—A. No sir.

Q. You have seen him every day?—A. I am intimately acquainted with him.

Q. He lives right near you?—A. I live right near him. He is in my house and I am in his.

Q. And you have never seen him intoxicated?—A. Never.

Q. You never knew of his being at his house for two or three days on a spree?—A. If he did, I would know it.

Q. You were there and are sure you would have known if such a thing had occurred?—A. Yes, sir.

Q. What is your observation as to the use of liquors among the employés, the seine men, and those who take care of the eggs, etc. Do they use liquors to any extent?—A. For the line of work they do, they are the soberest men I ever saw.

Q. To your knowledge does anybody connected with the Fish Commission keep any liquor of any kind on sale to the employés?—A. It is part of my duty to see that it is not allowed on the reservation.

Q. That is it?—A. That is so. That is my instruction.

Q. And the thing is not done?—A. No, sir; it is not, by any means.

Q. Do the seine men and others employed there go on the river boats as they touch there and get a drink?—A. I have often see them do that. The boat does not stay there but five minutes. I have often

seen them go aboard and get a drink, but whether they got a glass of beer or whisky I do not know.

Q. You have never seen any drunkenness?—A. I have seen one last year, and he was discharged.

Q. What is his name?—A. Mr. Blades. He was drinking towards the end of the season; he had been there two or three seasons; I asked for him this season, and it was said that they did not want him.

Q. Was he a seine hauler?—A. He was a seine mender; I do not know that he was discharged for that; that is my impression; I have not seen him since; I do not know anything about that.

Q. Do you know of Commissioner McDonald having taken parties of friends down there and giving them planked shad and dinners?—A. I know that he has often been there. About the planked shad, I never saw but one planked shad that I was positive that it was planked shad. Lieutenant Babcock, of the Fish Commission, gave that. The greater part of the guests of the party were of the Metropolitan Club here in Washington.

Q. When was that?—A. Five years ago—four or five years ago.

Q. Have you ever known Commissioner McDonald to take parties down there and entertain them down there?—A. I know that he has often been there, and that they have had lunch or something at the headquarters. I know one case where some of the members of the Committee on Fish and Fisheries being there with him. I was introduced to one of them.

Q. This summer?—A. Yes, sir. This is about the extent of anything I have ever seen there of that kind.

Q. Do you know upon that occasion whether the repast and whatever the refreshments were, were sent down from here by Colonel McDonald, and whether he sent his cook down?—A. I do not know anything about that.

Q. You do not know whether the entertainment was furnished from the mess?—A. I am just as ignorant of that as anybody. That was something outside of my business. I know that they were there a little while and went away again.

Q. Did you ever know a young man employed there within a year or two by the name of Harris? I think he helped to take care of the eggs when they were taken.—A. Oh, yes.

Q. A black-eyed and black-haired fellow?—A. I know him well.

Q. He was there one season, I think?—A. Yes, sir; the year before this.

Q. Do you know anything about the habits of Harris, whether he was a drinking man or not?—A. As I said before, the Fish Commission men I think drink less than any working men I ever saw. I have been in the Army all my life and among working men all my life. I do not know that he was much of a drinker.

Q. He testified that last summer when he was there during the fishing season, that Mr. Worth, who was in charge there, upon one occasion was at his house on a regular spree for two or three days, and did not come out of his house at all; that he was drunk.—A. If that is so I know nothing about it, and I believe I saw Mr. Worth every day since he has been there, unless it was during the five days I was at the Centennial in New York.

Q. When this man Harris was there, did you know of Mr. Worth being intoxicated?—A. I never heard or saw of Mr. Worth's drinking.

Q. If he had been on a regular debauch at his house for three days

would or would you not have been apt to have known of it?—A. I should.

Q. You do not think such a thing occurred, and it could not have occurred without your knowing it?—A. No, sir.

Q. Do you believe it did occur?—A. I do not.

Q. Do you know what they do with the fish taken there after taking the spawn?—A. They send them to Washington.

Q. Do you happen to know what is done with that money?—A. I do not, only from hearsay. I heard that they paid the seine haulers out of it.

Q. It has been stated that the money was made a fund, a sort of entertainment fund, and was spent in entertaining visitors there, and for wines, etc.—A. If they put up the Fish Commission as an entertainment company, it is the worst entertainment company I ever saw. They are the poorest beggars in the Government. They can not repair the house down there, or anything else. They are always talking about no money. I never saw them spend any money. I come in contact with different departments of the Government, but they are the poorest I have ever seen.

Right here I should like to say a word. I read some of the articles in the New York papers. Now, about Senator Gorman being down there. I want to see Senator Gorman. I played ball with him a number of years ago. I say it is a positive lie that he has ever been there in seven years, that I ever heard or knew of. I would have gone all over the ground to have found him if he was there. I sent my card in a while ago, and they said he was not in the Senate Chamber.

Q. Your observation is that the Commission does not entertain very lavishly down there?—A. No, sir. There might be some fish or something of that sort down there. That is all I ever saw.

There was one thing about Mrs. McDonald's coming down on the boat. I know of Mrs. McDonald's coming down on the *Corcoran* before or after the Commission boat, very often after. It looked to me as if she was afraid of that little thing. It is not much larger than a row boat

TESTIMONY OF JOHN SMITH.

JOHN SMITH, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where do you reside?—A. I live at 229½ Virginia avenue.

Q. Are you in the service of the Fish Commission?—A. Yes, sir.

Q. In what capacity?—A. I was on Fish Commission car No. 3. I cook. I just got in day before yesterday.

Q. How long have you been in employment of the Commission?—A. Off and on for about five years. I cooked at Fort Washington two springs.

Q. What was your pay when first employed?—A. Thirty dollars.

Q. What is your pay now?—A. Forty-five dollars; but putting in \$15 for rations leaves me only \$30—no more than at first.

Q. Before that your rations were furnished to you, so that you got just as much out of it before?—A. Yes, sir. Before Professor Baird died he raised the cook's pay to \$45. I thought I would get the whole \$45, but when I put in \$15 I found I got just the same. I have been on the Fish Commission quite a while.

Q. Who employed you when you acted as cook at Fort Washing-

ton?—A. When I first went to Fort Washington Mr. Carswell—he is the gentleman who employed me to go to Fort Washington.

Q. While you were cook at Fort Washington, did you ever plank any shad for Commissioner McDonald and his friends?—A. Yes, sir; I did.

Q. How often; how many times do you suppose?—A. Sometimes once a week and sometimes twice a week. I did not take any notice of how many times; some weeks twice a week, and sometimes only once.

Q. Did he often bring a party of friends down there with him?—A. Well he came down several times. There were some Senators came down with him, so I was told. I do not know who they were. There were three gentlemen and himself, and one or two young men.

Q. And they took dinner at the mess?—A. Took dinner over at Mr. Worth's. Mr. Worth had a house over there, and they ate over there. I planked the shad in the basement, and they ate in the big dining-room there.

Q. Did they ever have any wine or whisky or anything to drink?—A. No, sir; not to my knowledge.

Q. Did you ever see them have anything to drink?—A. No, sir.

Q. Did you prepare a shad bake for Mr. Gill and his friends when they came down there?—A. I think Mr. Gill came down with Colonel McDonald. I did not bake any shad for him alone, but for the whole party. I was the cook, and cooked for anybody who came. I sometimes heard the names, but they have passed away now.

Q. How many times do you think the Commissioner or Mr. Gill were there with parties of gentlemen?—A. About three times. I was down there last spring. I will not say three times, but once or twice. I did not take any notice of how many times they came down there. I had to cook for the men, the seine haulers, and the men who got the spawn ate at the barracks. I did not take notice of how many times they were down there; either once or twice. I did not take much notice. They used to send me a day's notice to have planked shad, and, of course, I used to do it.

Q. Did you also prepare planked shad for Mr. O'Connor, who is connected with the Commission here, and some of his friends?—A. I do not think I did. If I did, it was not under his name. I did not hear his name called.

Q. Did not Mr. Worth send Daniel Moore to Mr. Harris, who was in charge of the seine, for the shad on such occasions?—A. Well, I do not know. Mr. Worth would come in the morning and say, "John, to-morrow there will be some parties down here," and to have planked shad about 4 or 5 o'clock. My shad used to be cut and cleaned for me, and I used to plank it. That is as much as I know about it.

Q. You generally cooked the dinner at Mr. Worth's house whenever he had company?—A. Mr. Worth had a cook of his own.

Q. You did not cook for Mr. Worth?—A. I only cooked for my regular mess and the crew.

Q. Did you ever hear that Mr. Worth received money for some of these shad dinners?—A. No, sir; I have not.

Q. Did you ever buy any whisky from the steamer *Corcoran* for Mr. Worth?—A. No, sir; I do not remember taking a drink on the *Corcoran* in my life.

Q. You never bought any whisky off the steamer *Corcoran* for Mr. Worth or anybody else?—A. No, sir; not in my life, to my knowing.

Q. Did you ever see Mr. Worth intoxicated?—A. No, sir; I have not. Mr. Worth always came into the kitchen pleasant, and I will say he is the pleasantest man I ever had anything to do with.

Q. You never saw him drunk?—A. I never saw him drunk in my life.

Q. Do you know whether he was in the habit of drinking?—A. No, sir; he worked on the No. 3 car with me. I never saw him take any drink at all. If he did I did not see him.

By Senator SQUIRE:

Q. You do not know whether he did or not?—A. Of course I can only say that I never saw him take a drink.

Q. If anybody else said he did would you contradict him?—A. I would not contradict anybody, except what my eyes see. I do not know what you see. I would not contradict anything you say you saw.

By the CHAIRMAN:

Q. And you saw him every day?—A. I saw him every day the Lord sent me. I was working under Mr. Worth at the time.

Q. You never saw him under the influence of liquor?—A. No, sir. His children were always playing around in the kitchen.

Q. Did you ever hear of men in the mess speak of Mr. Worth as a drinking man?—A. No, sir.

Q. Did not Colonel McDonald, Mr. Gill, and Mr. O'Connor come to Fort Washington on the *Blue Wing* when they came down?—A. Yes, sir; that is the boat they came down on.

Q. What was the *Blue Wing* used for; what did she do?—A. She was running backwards and forwards down there, but I do not know what they used her for.

Q. Did she go down the river after eggs?—A. I could not say, because I was up on the hill cooking.

Q. Did you help to clean up the house occupied by Mr. Worth after he left Fort Washington?—A. No, sir, I did not. I only kept my kitchen clean. I cleaned that out thoroughly before I left. There was a man, Dan Moore, to do that. I only looked after my cooking utensils.

Q. Did you ever see any whisky bottles lying around?—A. No, sir.

Q. Did you gather up any empty whisky bottles or demijohns around the house occupied by Mr. Worth and bring them to Washington?—A. No, sir. I carried a satchel down and brought my clothes back in it.

Q. You say you were on car 3?—A. No. 3 car, Fish Commission. I have been with Mr. Ellis going on five years.

Q. Among the supplies furnished for the car by the Government for the mess are there cigars and whisky and wines?—A. Not to my knowing, sir. All I know about it is what they furnished to the mess, of course. Each man puts in \$15. We have four regular men, five with myself. Of course I cook. The captain and three more, and of course I cook. That makes five. They all put in \$15 each, and I do the cooking and waiting on them.

Q. Are they in the habit of having liquors on your car?—A. No, sir. I have worked with Mr. Ellis for five years, and I never saw him take a drink the whole time I was on the car with him. He was always very quiet. I would not want to work for a better man. Last summer I was up at Wood's Holl. I took charge of the kitchen up there.

Q. Was there any drinking up there?—A. No, sir.

Q. As a rule it was not a drinking crowd?—A. I never saw any man drink about the kitchen where I worked. I had nothing to do outside.

By Senator SQUIRE:

Q. Do you know anything about who kept the whisky which is said

to have been bought from the proceeds of the sale of fish there? Did you take charge of it?—A. No, sir.

Q. Do you know whether there was any such whisky around the fort?—A. No, sir.

Q. Were any liquors bought with the shad money or any other fish money?—A. I did not see any whisky at all when I was down there.

Q. You do not know anything about that?—A. No, sir. All I received when I was down there were the groceries.

At 4 o'clock p. m. the subcommittee adjourned to meet at the call of the chairman.

WASHINGTON, D. C., *July 16, 1890.*

The subcommittee met at 10 o'clock a. m., pursuant to call of chairman.

Present: Senators Stockbridge (chairman) and Squire.

TESTIMONY OF JOHN PAUL BAUR.

JOHN PAUL BAUR, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Where is your residence?—A. 815 F street southwest.

Q. Washington, D. C.?—A. Yes, sir.

Q. Are you in the employ of the United States Fish-Commission?—A. No, sir.

Q. Have you been?—A. Yes, sir.

Q. When did you enter the employ of the Fish Commission?—A. In 1883.

Q. In what capacity?—A. Spawn taker.

Q. Have you been employed during the seasons of taking spawn since then?—A. Yes, sir.

Q. Right along?—A. Yes, sir.

Q. You are only employed part of the year?—A. Yes, sir.

Q. Just during the fishing season?—A. Yes, sir.

Q. Where were you employed this last summer?—A. Fort Washington.

Q. What was your compensation?—A. Fifty-five dollars a month.

Q. Who is in charge of the station there?—A. A Mr. S. G. Worth.

Q. What can you say about Mr. Worth's habits, is he a temperate man or otherwise?—A. I always thought he was a temperate man. I never saw anything to make me think otherwise.

Q. Have you been right there with him since he has been in charge there?—A. Yes, sir.

Q. If he had been an intemperate man do you think it would have come under your observation?—A. I think so; yes, sir.

Q. Have you ever known of Mr. Worth remaining at his house two or three days at a time and not coming down to the station?—A. No, sir.

Q. Do you know Sergeant Joyce?—A. Yes, sir.

Q. Is he a temperate man?—A. I think he is, sir. To the best of my knowledge he is.

Q. He lives near Mr. Worth, does he not, occupies a house near him?—A. Yes, sir; he lives within 25 yards of Mr. Worth's quarters.

Q. Do you know whether any one connected with the Fish Commission

at the Fort Washington Station kept any liquors for sale to employés there?—A. No, sir. I am certain that that was never done.

Q. Is it true that sometimes when the Mt. Vernon boat would stop there the seine men would slip forward and get a drink?—A. Well, sir, that has occurred.

Q. Have you ever known any employé at that Station to be incapacitated for attending to his duties on account of drinking?—A. Well, sir, that was only on one occasion; there was one man there by the name of John Blades. He was a seine mender. He was discharged for that.

Q. By whom was he discharged?—A. By the captain of the seine, Mr. L. G. Harron, by instructions from Mr. Worth.

Q. When was that?—A. Three springs ago. I think he was reinstated though. He was put back to work, I think; I am not positive.

Q. Did you ever know a man there by the name of Z. Vance Harris?—A. Yes, sir; I roomed with him.

Q. When was that, two years ago?—A. That was in 1888.

Q. The season of 1888. He was there only one season?—A. Yes, sir, and then about one month. He came late in the season.

Q. He was employed about a month?—A. Yes, sir.

Q. Was he a temperate man?—A. Well, I have seen him take a drink.

Q. But you would not call him an intemperate man?—A. No, sir; I would not.

Q. He took an occasional drink?—A. Yes, sir.

Q. You say you roomed with him?—A. Yes, sir.

Q. Did he ever tell you he went up to Mr. Worth's house to see him and found him at home there intoxicated?—A. No, sir.

Q. He never talked to you about Mr. Worth being an intemperate man?—A. No, sir. I never heard him speak of it. He seemed to be an intimate friend of Mr. Worth's. He was taken sick one time and I remember him going over in his quarters and staying a day or two.

Q. To whom do you refer as being taken sick, Mr. Worth or Mr. Harris?—A. Mr. Harris was taken sick, and being an intimate friend of Mr. Worth's he was taken over to Mr. Worth's quarters and nursed.

Q. Do you happen to remember whether at that time Mr. Worth was himself unwell and at home?—A. I remember him complaining once of having a chill.

Q. Do you think it was at the time of Mr. Harris's sickness when he was taken over to Mr. Worth's house?—A. I do not think it was.

Q. Your relations as a room-mate of Mr. Harris were such that if he had found Mr. Worth intoxicated for two or three days continuously at his house he would, would he not, have been apt to have mentioned this circumstance to you?—A. I think he would have been very apt to have.

Q. Do you know anything about what was done with the fish after they had taken the spawn. What did they do with the fish; what was the custom?—A. They were shipped to Washington.

Q. And sold?—A. Yes, sir.

Q. Do you know what was done with the money?—A. No, sir.

Q. Do you know whether the money received from this source was appropriated to pay the seine hands, the expenses of hauling the seine?—A. No, sir; I do not.

Q. Do you remember whether Mr. Worth was always on hand at the station on duty during the time of your service there?—A. Yes, sir.

Q. You do not remember of his being away for a day?—A. No, sir; I do not remember of his being away even for a day.

TESTIMONY OF CHARLES A. STEUART.

CHARLES A. STEUART, being duly sworn and examined, testified as follows :

By the CHAIRMAN :

Q. Where is your residence ?—A. Washington, D. C.

Q. Are you connected with the United States Fish Commission ?—A. No, sir; I can not say that I am.

Q. Have you ever been ?—A. Yes, sir; temporarily.

Q. During what years ?—A. I might make a little explanation there. I am really employed by the National Museum. In the spring of the year I would go out for a week or ten days, or possibly two weeks, during the shad season. That is about the time it would last. After that my connection with the Fish Commission ended.

Q. You have done that from year to year ?—A. Yes, sir; for ten years, with the exception of one year.

Q. You say you have been out with the Commission during the shad season. In what way, or for what purpose ?—A. To plant the young fry.

Q. You would go out and assist in that ?—A. Yes, sir; I would go out and plant in the different streams.

Q. Out on the car ?—A. No, sir; I generally went with the regular train; what we call side shipments. I have once or twice traveled on the car for a short while in years gone by.

Q. You stated that for some eight or ten years you had been in the habit of going out ?—A. Yes, sir.

Q. Is there usually a per cent. of loss in the transportation of young fish ?—A. Yes, sir.

Q. About what per cent. of loss ?—A. It generally varies. It is a hard matter to give a general per cent. of the loss of shad, because if the weather is cold then they carry better.

Q. What would be the general average of loss ?—A. I suppose 5 or 10 per cent. possibly—that is, if it is a fair, good trip.

Q. Please state the usual number of young fish taken out in each can ?—A. From 20,000 to 25,000 in a can.

Q. Do the size of the cans vary somewhat ?—A. No, sir; they are generally of average size. There have been cases where they carried more; but 25,000 would be the average.

Q. Do they put more or less of the young fish in a can according to the distance they are to be taken ?—A. Yes, sir; I do not know that they put in any less. They usually put possibly a few less —

Q. On a long trip than on a short trip ?—A. Yes, sir; the short trips are so short that it does not matter much how many they put in.

Q. You have stated about the number they put in ?—A. Yes, sir; about 20,000 or 25,000.

Q. Have you made any trips for the distribution of young shad this year ?—A. Yes, sir.

Q. State the number of trips made and in what waters the fish were planted this year.—A. We made, I guess, five or six trips this year, as near as I can recollect.

Q. Do you remember the waters in which you planted the fish ?—A. I can not remember all. The Mattaponi River.

Q. Where is that river ?—A. Between here and just the other side of Fredericksburgh—Milford's Station. The next trip was at Goldsbo-

rough, N. C. I have really forgotten the name of that river. The next trip was just the other side of Norfolk, in North Carolina, two different streams, two places. That is about all I can remember now.

Q. Were those streams nice streams in which to plant fish?—A. Yes, sir.

Q. What kind of fish did you take out?—A. Young fry shad.

Q. Give the number of fish said to have been taken and the number of cans used on each trip.—A. We used from 15 to 20 cans. I am speaking about these single trips I made on the regular train.

Q. Did you meet with any loss of fish on these trips?—A. Yes, sir.

Q. Above or below the average of loss?—A. Two trips were above the average.

Q. Can you state why that unusual loss occurred?—A. I could hardly give a correct reason for that. It has been a puzzle.

Q. Was it quite a noticeable increase above the average?—A. Yes, sir; it was quite an increase above the average. That trip that I speak of was what you might call an experimental trip. I had at that time considerably more than the average lot on a trip.

Q. You mean more in a can?—A. Yes, sir; and one can particularly was an experiment. The superintendent told me to see what I could do.

Q. It was done purposely as an experiment?—A. As I understand it.

Q. And the result was not favorable?—A. No, sir; I reported the fact.

Q. Have you any means of judging about what per cent. of loss there was on that trip where the cans were filled more than usual?—A. I think I reported at the time—if I recollect correctly I made a report—I think it was 40 per cent., 30 or 40 per cent. That was a pretty big loss.

Q. Was it your custom to make a report upon your return from each trip?—A. Yes, sir; I always make a report of what per cent. is lost; how much is lost.

Q. How can you determine that per cent. of loss?—A. We know how many we have got in the cans, and we can tell about the loss. You might say we know exactly how many are there, and then we know how many are dead, because we generally draw those off.

Q. You take those off?—A. Yes, sir; we draw the dead fish away. They go to the bottom and we draw them off, and in that way we can tell pretty nearly the per cent.

Q. From your experience as messenger in the distribution of shad what do you honestly consider to be the condition of the fish taken out this year as compared with former years; that is, the vitality and vigor of the fish?—A. I can not say that I am really capable of judging that, because, as I said before, I only handled the fish every spring of the year, and only took just so many, which were put in a can. They would tell me there were so many cans of fish to go to such and such a point. I did not work among the jars and see them hatched.

Q. You can not tell whether the fish were as healthy and as vigorous this year as in former years?—A. I could not say, positively, whether they were or not. Of course, there are some shipments that would be hatched out that possibly would be a little weaker than others.

Q. Were they all equally strong and healthy fish; are they all equally strong in every case?—A. I do not think they would be.

Q. Do you not think if all the young fish had been properly handled in hatching and nursing many of them would have been strong enough to have been planted in other rivers at a greater distance from the hatchery?—A. I did not know that there was any fault in regard to the

hatching, and I did not know that they were planted at a nearer point because they were weak.

Q. To the best of your knowledge and belief, what would you think was a fair and honest count of the fish in each can this year as compared with previous years?—A. In that case I am not able to say, because I had no way of counting the fish. Of course, after they were delivered to me in cans they would tell me there were so many thousand fish in those cans.

Q. Have you any reason to think that that number was placed too high?—A. On one occasion I thought particularly that they seemed a little high, but as I say, I was not being able to see all, and had no occasion to count them in the cans. By looking into the cans simply you can not always tell exactly.

Q. If your attention was specially called to it and you endeavored to estimate them when they were in the can, could you estimate the number of fish as closely as the person who put them up?—A. No, sir.

Q. It would be impossible to do it?—A. I think so.

Q. Do you deem it advisable to carry over 50,000 young shad in a can on a long trip as far as Florida?—A. I think it would be too many in a can.

Q. About how many would be the number?—A. About 25,000; possibly a little more.

Q. Was a can ever delivered to you which was said to contain 50,000?—A. That is just the point I spoke about awhile ago.

Q. It was done rather as an experiment?—A. Yes, sir.

Q. And it resulted unfavorably?—A. Yes, sir; that is the shipment of which I said we lost about 30 or 40 per cent. I have really forgotten what I reported then, but we have it at the office there. But that is to the best of my recollection.

Q. The Museum and the Fish Commission seem to be in pretty close relations. They borrow men back and forth as occasion requires, do they not?—A. Not to my knowledge.

Q. That is you are detailed from the Museum during certain seasons to do this work?—A. No, sir; with the exception of one or two years, my work with the Commission came out of my annual leave. It was taken out of my leave. I would make an application for a leave of absence and that would be granted, and I would use that in the spring of the year in traveling for the Commission. I was not paid by the Fish Commission, only my actual traveling expenses.

Q. You were not paid by the Commission?—A. No, sir, except as I said, one or two years, several years back. Then at that time I was transferred to the Commission.

Q. This year did you go on this trip during your leave from the Museum?—A. Yes, sir; and every day of it has been taken from my regular leave.

Q. And you did it without compensation?—A. Yes, sir, except having my actual expenses paid. The reason I did that was because I liked the work, and after being closed up in a building all the winter in the spring of the year I felt that I would like to go out on a trip.

Q. That is an economical arrangement for the Fish Commission. If you did not go somebody would have to go who was on pay, is not that so?—A. That depends. The trips that I made they would have to have a new man, and he possibly would not be an expert.

Q. That is just what I asked you. It is an economical arrangement for the Fish Commission?—A. Yes, sir.

Q. You donate yourself?—A. Yes, sir.

Q. Let me ask you this question: It has been stated in the New York papers, which published the articles reflecting upon the management of the Fish Commission—you have seen some of those articles, have you not?—A. No, sir; I have not. I have been told about them, but I have been out of the city lately and have not seen any of those papers.

Q. The substance of the charges is that the general management of affairs at the Fish Commission was very loose; that the employés there came and went about as they pleased, and that there was a lack of order and system and business methods. Now, from what you have seen and know, being interested at any rate in the work, what would you say on that point?—A. I have not seen anything like that; but I have been in those offices a very little time. I do not think I spent two hours at any one time in the building. I would go there, get an order for such a trip, and would go up town and get the fish and put them in a wagon. Probably when I came back I would have to go to another place. From what I have seen I have not seen anything really that would lead me to believe there was anything loose about it.

TESTIMONY OF HERBERT A. GILL, recalled.

HERBERT A. GILL, being recalled, testified as follows:

The WITNESS. Here is a list of appropriations for the fiscal year beginning July 1, 1884, and ending for the fiscal year June 30, 1890.

By Senator SQUIRE:

Q. That is a list of the appropriations?—A. Yes, sir.
The list of appropriations is as follows:

Appropriations for the U. S. Commission of Fish and Fisheries.

FISCAL YEAR 1884-'85.

For the propagation of food fishes: For the introduction by the U. S. Fish Commission into, and to increase in, the waters of the United States of useful food-fishes, including lobsters, oysters, and other shell-fish, and for continuing the inquiry into the causes of the decrease of the food-fishes of the United States, including salaries or compensation of all necessary employees.....	\$125,000.00
For expenses of the office of the U. S. Fish Commission: For rent of rooms in the city of Washington.....	1,380.00
For the maintenance of fish-ponds: For the maintenance of the United States fish-ponds in Washington and elsewhere, and the distribution of carp and other young fish, including salaries or compensation of all necessary employees.....	45,000.00
For the maintenance of vessels: For the maintenance of the vessels of the United States Fish Commission, including salaries or compensation of all necessary employees, for the storage and wharfage, and for the boats, apparatus, and machinery required for use therewith.....	45,000.00
For completion of the car for the distribution of carp and other useful food fishes to distant portions of the United States, authorized by act approved March three, eighteen hundred and eighty-three, and its equipment.....	4,500.00
And the sum of five thousand five hundred dollars appropriated by the act approved March third, eighteen hundred and eighty-three, for the construction of a car for the distribution of carp and other useful food fishes to distant portions of the United States, be and the same is hereby, reappropriated and made available during the fiscal year eighteen hundred and eighty-five.	
For completion of the necessary constructions at Wood's Holl Harbor, Massachusetts, and their equipment, for the propagation of and investigation in regard to useful sea-fishes and other marine animals.....	20,000.00

For the inquiry of food-fishes: For collecting statistics of the sea-coast and lake fisheries of the United States, especially those covered by the Washington treaty of eighteen hundred and seventy-one, including salaries and compensation of all necessary employees.....	\$3,500.00
For illustrations for the report on food-fishes: For preparation of illustrations for the report of the United States Commissioner of Fish and Fisheries.....	1,000.00
For propagation of food-fishes.....	12,000.00
For the maintenance of the United States fish-ponds in Washington and elsewhere, and the distribution of carp and other young fish, including salaries or compensation of all necessary employees, being a deficiency for the fiscal year eighteen hundred and eighty-five.....	803.08
	258,183.08

FISCAL YEAR 1885-'86.

Propagation of food-fishes: For the introduction by the United States Fish Commission into and the increase in the waters of the United States of food-fishes and other useful products of the waters, including lobsters, oysters, and other shell-fish, and for continuing the inquiry into the fisheries of the United States and their subjects, and for such general and miscellaneous expenditures as the Commissioner of Fish and Fisheries may find necessary to the prosecution of his work, including salaries or compensation of all necessary employees.....	130,000.00
And the Secretary of the Treasury is authorized to detail from time to time for duty under the Commissioner of Fish and Fisheries any officers and men of the Revenue-Marine Service whose services can be spared for such duty.	
Rent of office United States Fish Commission: For rent of rooms in the city of Washington	2,000.00
Maintenance of fish-ponds: For the preparation and maintenance of fish-ponds in Washington and elsewhere, and the distribution of the eggs and young of the whitefish, salmon, shad, cod, carp, and other useful inhabitants of the waters, including salaries or compensation of all necessary employees.....	45,000.00
Maintenance of vessels: For the maintenance of the vessels of the United States Fish Commission, and for boats, apparatus, machinery, and the other facilities required for use with the same, including salaries or compensation of all necessary employees.....	45,000.00
Fish Commission buildings, Wood's Holl, Massachusetts: For increasing the facilities at Wood's Holl, Massachusetts, station for the artificial propagation of useful marine animals, such as cod, halibut, mackerel, lobsters, oysters, and so forth, and the investigations connected therewith, to be immediately available.....	20,000.00
Sailing vessel, food-fishes: For construction of a suitable sailing vessel for the purpose of collecting the spawning cod and other useful food-fishes on their breeding grounds off the coast and conveying them to the shore station of the Commission, to be made immediately available.....	14,000.00
<i>Provided, however,</i> That the Secretary of the Navy is authorized and directed to transfer from the Navy to the United States Fish Commission a sailing vessel suitable for such service, if any such vessel can be spared from said service, in which event the above sum shall not be expended.	
To supply a deficiency in the appropriation for the propagation of food-fishes for the fiscal year ending June thirtieth, eighteen hundred and eighty-six.....	12,000.00
	268,000.00

FISCAL YEAR 1886-'87.

Propagation of food-fishes: For the introduction by the United States Fish Commission into and the increase in the waters of the United States of food-fishes and other useful products of the waters, including lobsters, oysters, and other shell-fish, and for continuing the inquiry into the fisheries of the United States and their subjects, and for such general and miscellaneous expenditures as the Commissioner of Fish and Fisheries may find necessary to the prosecution of his work, including salaries or compensation of all necessary employees.....	130,000.00
--	------------

Fish-hatchery at Duluth, Minnesota: For the establishment of a fish-hatchery on Lake Superior, at or near Duluth, Minnesota.....	\$10,000.00
<i>Provided</i> , That the city of Duluth shall furnish without charge a suitable site for said fish-hatchery.	
Rent of office United States Fish Commission: For rent of rooms in the city of Washington.....	2,040.00
Maintenance of fish-ponds: For the preparation and maintenance of fish-ponds in Washington and elsewhere, and the distribution of the eggs and young of the whitefish, salmon, shad, cod, carp, and other useful inhabitants of the waters, including salaries or compensation of all necessary employees.....	45,000.00
Maintenance of vessels: For the maintenance of the vessels of the United States Fish Commission, and for boats, apparatus, machinery, and the other facilities required for use with the same, including salaries or compensation of all necessary employees.....	45,000.00
Steamer Albatross: For the construction and introduction of new boilers for the steamer Albatross, and other necessary general repairs.....	20,000.00
For expenses of voyage from New York to San Francisco, including cost of coal and other necessary supplies	7,500.00
	259,540.00

FISCAL YEAR 1887-'88.

Propagation of food-fishes: For the introduction by the United States Fish Commission into and the increase in the waters of the United States of food-fishes and other useful products of the waters, including lobsters, oysters and other shell-fish, and for continuing the inquiry into the fisheries of the United States and their subjects, and for such general and miscellaneous expenditures as the Commissioner of Fish and Fisheries may find necessary to the prosecution of his work, including salaries or compensation of all necessary employees.....	130,000.00
Fish-hatchery on the Columbia River: For the establishment of a salmon-hatchery, upon the Columbia River, its tributaries or their branches	10,000.00
<i>Provided</i> , That if, in the opinion of the United States Fish Commissioner, the existing laws of Oregon and Washington are not sufficient for the protection of salmon in the Columbia River and its tributaries, this appropriation shall not be available until the legislatures of the State of Oregon and of Washington Territory shall have enacted such additional legislation as, in the opinion of the Fish Commissioner, shall be necessary to protect the salmon from improper capture and destruction.	
Rent of office United States Fish Commission: For rent of rooms in the city of Washington.....	2,040.00
Maintenance of fish-ponds: For the preparation and maintenance of fish-ponds in Washington and elsewhere, and the distribution of the eggs and young of the whitefish, salmon, shad, cod, carp, and other useful inhabitants of the waters, including salaries or compensation of all necessary employees.....	45,000.00
Maintenance of vessels: For the maintenance of the vessels of the United States Fish Commission and for boats, apparatus, machinery, and other facilities required for use with the same, including salaries or compensation of all necessary employees	45,000.00
Fish-ponds, Monument Lot: For restoring the drainage of the United States fish-ponds in Washington, destroyed by the filling up of the flats, and for an increased supply of water, to be immediately available	5,000.00
Steam-vessels, food-fishes: For new boilers and for a thorough repair and refitting of the steamer <i>Fish Hawk</i>	11,500.00

Yeatman, P. T	Assistant, Cincinnati Exposition.	June 5 to July 31, 1888	\$60 per month.....	112.00
				4,703.68

The WITNESS. Here are statements for the fiscal years 1884-'85, 1885-'86, 1886-'87, 1887-'88, 1888-'89, 1889-'90, of permanent and temporary employes of the Commission. That is all paid for services in connection with the operations of the Commission.

By Senator SQUIRE :

Q. Do these comprise all payments for services during these several years ?—A. Yes, sir.

By the CHAIRMAN :

Q. And each man's name given ?—A. Yes, sir; arranged alphabetically—character of service, period of time, rate of pay, total pay, and where employed. All of these had to be taken off of slips, going over the vouchers first, and arranged alphabetically and boiled down, and finally put in this shape.

Q. Have you arranged it in such manner—say, here is William Boulton, watchman—has he been in continual service ?—A. This indicates from July 1, 1884, to September 30, 1884, and June, 1885, \$10 a month, the total amount paid being \$40.

Q. If that man were changed to some other place and the character of his duties changed, and his compensation changed, would that be shown here ?

Senator SQUIRE. It shows for itself.

The WITNESS. Where a man is paid different rates separate entries are made. These statements I think are correct. Great care has been taken in getting them up, and I think they can be thoroughly relied upon. They are not cooked up in any way.

The statements referred to above are as follows :

FISCAL YEAR 1884-'85.

Name.	Service.	Period of time.	Rate of pay.		Total of pay.	Remarks.
			Pay.	Time.		
Addison, A. C.	Clerk	July 1, 1884, to June 30, 1885	\$75.00	Per month	\$900.00	Office of accounts.
